

About the Authors

Chen S. B.(Chen Shan-Ben) received his Ph.D. degree in the control theory and its application from Harbin Institute of Technology, P.R.China, in 1991. He worked as post-doctoral fellow from 1993 to 1995, professor and supervisor for doctoral candidates from Jul.1995 to Mar. 2000, in HIT. From Apr. 2000 to present, he has been a Special Professor position, Cheung Kong Scholar Programme, Ministry of Education, PRC & Li Ka Shing Foundation, HK, and engaged in Welding Engineering Institute, Shanghai Jiao Tong University, PRC.

Prof. Chen is currently a Senior member of IEEE, Chair of Robot & Automation Committee, Chinese Welding Society(CWS), Standing member of board of directors,CWS, and other academic positions. His research interests include the intelligent technology for welding robot, intelligent control of welding process, robust control of uncertain systems, and relevant ranging in automation and advanced manufacturing.

Prof. Chen is the author or co-author of 6 scientific books and more than 200 magazine papers. He is the awarder of 6 scientific and technological prizes by National and Educational ministry of China. His main papers were published in IEEE Trans. Automatic Control , IEEE Trans. SMC, J. of Intelligent & Robotic Systems, Welding J., Int. J. of System Sciences and other international academic magazines.

As one of editors, Prof. Chen edited twice the Lecture Notes in Control and Information Sciences “*ROBOTIC WELDING, INTELLIGENCE AND AUTOMATION*”published in Springer Verlag, respectively LINCIS 299 in 2004 and LINCIS 362 in 2007.

Wu, Jing received her B.S. and M.S. in materials science and engineering from Shanghai Jiao Tong University, P.R. China. She is currently the Ph. D student and research assistant of Prof. Chen S. B. Her research interests include machine vision and modelling and control of arc welding dynamical process. She is focusing on 2D and 3D image processing algorithms for the arc welding process at present.

Intelligentized Methodology for Arc Welding Dynamical
Processes

Visual Information Acquiring, Knowledge Modeling and
Intelligent Control
