1	Introduction	1
2	General Properties of the Electron	5
2.1	Particle Nature of the Electron	5
2.1.1	Equation of Motion	6
2.1.2	Conservation of Energy	6
2.1.3	Hamilton's Principle	7
2.1.4	Principle of Maupertuis	11
2.1.5	Time of Flight	11
2.2	Wave Properties of the Electron	12
2.2.1	Eikonal and Fermat's Principle	14
2.2.2	Phase, Wavelength, Frequency, Phase and Group Velocity, and Index of Refraction	17
2.3	Ray Properties Associated with the Eikonal	22
3	Multipole Expansion of the Stationary Electromagnetic Field	27
3.1	Scalar Potentials	28
3.1.1	Complex Variables	29
3.1.2	Laplace Equation	31
3.1.3	Planar Fields	32
3.2	Systems with Straight Axis	34
3.2.1	Multipole Expansion of the Scalar Potential	34
3.2.2	Electrostatic Cylinder Lenses	37
3.3	Systems with Curved Axis	39
3.3.1	Recurrence Formula for the Coefficients of the Power Series Expansion	40
3.3.2	Power Series Expansion of the Electric Potential	42
3.3.3	Index of Refraction	43
3.4	Magnetic Vector Potential	44
3.4.1	Rectilinear Systems	47

3.4.2	Magnetic Fields with Special Symmetry	48
3.4.3	Systems with Curved Axis	50
3.5	Integral Representation of the Multipole Components of the Potential	52
3.6	Potentials of Simple Systems	53
3.6.1	Laplace Equation for Oblate Spheroidal Coordinates . . .	54
3.6.2	Solutions with Rotational Symmetry	55
3.6.3	Multipoles	61
4	Gaussian Optics	65
4.1	Paraxial Path Equation	66
4.2	Orthogonal Systems with Midsection Symmetry	74
4.3	Systems with a Straight Optic Axis	77
4.3.1	Systems with an Axis of Rotational Symmetry	77
4.3.2	Wronski Determinant	81
4.3.3	Lagrange–Helmholtz Relation	81
4.3.4	Theorem of Alternating Images	83
4.3.5	Longitudinal Magnification	86
4.3.6	Characteristic Paraxial Rays	86
4.3.7	Thin-Lens Approximation	87
4.4	Quadrupoles	93
4.4.1	Imaging Properties of a Single Quadrupole	96
4.4.2	Quadrupole Multiplets	99
4.4.3	Strong Focusing	101
4.5	Electrostatic Cylinder Lenses	111
4.5.1	Modified Paraxial Equation	112
4.5.2	Short Cylinder Lenses	114
4.6	General Systems with Straight Axis	117
4.6.1	Inseparable Systems with Straight Axis	118
4.6.2	Generalized Helmholtz–Lagrange Relations	120
4.6.3	Imaging Properties	122
4.6.4	Paraxial Pseudorays	126
4.7	Systems with Curved Axis	128
4.7.1	General Systems	128
4.7.2	Systems with Midsection Symmetry	131
4.8	Quadrupole Anastigmat	133
4.8.1	Focal Lengths of the Constituent Quadrupoles of the Anastigmat	135
4.8.2	Cardinal Elements of the Anastigmat	138
4.9	Variable-Axis Lens	143
4.10	Highly Symmetric Telescopic Systems	146

5	General Principles of Particle Motion	155
5.1	Hamiltonian Formulation	155
5.2	Lagrange Invariants	157
5.3	Liouville's Theorem	160
5.3.1	Paraxial Approximation	162
5.3.2	Abbe Sine Condition	163
5.4	Generalized Symplectic Matrices	164
5.5	Poincaré's Invariant	167
5.6	Eikonals	173
5.6.1	Mixed Eikonal and Sine Condition	175
5.6.2	Perturbation Eikonal	177
5.6.3	Integral Equations of the Path and Momentum Deviations	184
5.7	Poisson Brackets	185
6	Beam Properties	187
6.1	Brightness	188
6.2	Emittance	190
6.2.1	Paraxial Approximation	192
6.2.2	Matching	194
7	Path Deviations	197
7.1	Iteration Algorithm	198
7.2	Canonical Representation	202
7.2.1	Recurrence Formula	203
7.2.2	Canonical Representation of the Path Deviations	204
7.3	Expansion Polynomials of the Variational Function	207
7.4	Path Equation Approach	210
7.4.1	Primary Deviations	212
7.5	Second-Rank Path Deviations of Systems with Midsection Symmetry	213
7.5.1	Wien Filter	214
7.5.2	Magnetic Systems	217
7.6	Second-Rank Path Deviations of Systems with Straight Axis	220
7.6.1	Second-Order Path Deviation	221
8	Aberrations	227
8.1	Second-Rank Aberrations	230
8.1.1	Systems with Midsection Symmetry	231
8.1.2	Systems with Straight Optic Axis	235
8.1.3	Axial Chromatic Aberration and Chromatic Distortion	236
8.2	Third-Order Aberrations of Systems with Straight Axis	240
8.2.1	Structure of the Geometrical Eikonal Polynomials	241

8.3	Geometrical Aberrations of Round Lenses	243
8.3.1	Scherzer Theorem	248
8.3.2	Spherical Aberration and Disk of Least Confusion	249
8.3.3	Coma	251
8.3.4	Image Curvature	253
8.3.5	Field Astigmatism	254
8.3.6	Distortion	256
8.4	Geometrical Aberrations of Quadrupole–Octopole Systems	258
8.4.1	Aperture Aberration of Stigmatic Orthogonal Quadrupole Systems	260
8.4.2	Aberrations Introduced by Octopoles	261
8.4.3	Third-Order Aberrations of Systems with Threefold Symmetry Corrected for Second-Order Aberrations	262
8.4.4	Parasitic Aberrations	264
9	Correction of Aberrations	271
9.1	Correction of Chromatic Aberration	274
9.1.1	First-Order Wien Filter	274
9.1.2	Correction of Chromatic Distortions	277
9.1.3	Electrostatic Correction of Chromatic Aberration	280
9.1.4	Chromatic Correction of Systems with Curved Axis	285
9.2	Correction of Geometrical Aberrations	291
9.2.1	Correction of Second-Order Aberrations	292
9.2.2	Correction of Third-Order Spherical Aberration	297
9.2.3	Aplanats	299
9.2.4	Achromatic Aplanats	302
9.2.5	Correction of Third-Order Field Curvature and Astigmatism	311
9.2.6	Correction of Coma	315
10	Electron Mirrors	321
10.1	Reference Electron	322
10.2	Equation of Motion	323
10.3	Eikonal Approach	325
10.4	Rotationally Symmetric Mirrors	327
10.4.1	Linear Approximation	327
10.4.2	Lateral Fundamental Rays	328
10.4.3	Longitudinal Fundamental Deviations	328
10.5	Path Deviations	334
10.6	Electrostatic Mirror	337
10.6.1	Positional Deviations	337
10.6.2	Axial Aberrations	338

11 Optics of Electron Guns	345
11.1 Field Emission Guns	345
11.2 Gaussian Optics	347
11.3 Aberrations	350
11.3.1 Second-Rank Deviations	350
11.3.2 Third-Order Spherical Aberration at the Crossover	352
12 Confinement of Charged Particles	355
13 Monochromators and Imaging Energy Filters	359
13.1 Electrostatic Monochromator	360
13.2 Imaging Energy Filters	362
13.2.1 Types of Imaging Energy Filters	363
13.2.2 MANDOLINE Filter	365
13.2.3 W-Filter	369
14 Relativistic Electron Motion and Spin Precession	373
14.1 Covariant Hamilton Formalism	375
14.2 Path Equations and Hamiltonian in Minkowski Space	380
14.3 Four-Dimensional Hamilton–Jacobi Equation	383
14.4 Generalized Maupertuis Principle	385
14.5 Approximate Relativistic Canonical Momentum and Hamiltonian in the Laboratory System	388
14.6 Spin Precession	391
References	395
Index	401
