
Contents

1	Introduction	1
1.1	Low Temperatures in Nature	3
1.2	Cryomedicine: Cryosurgery and Cryopreservation	4
1.3	Lyophilization	8
1.4	Cryofixation	8
1.5	Destruction of Biological Tissues	9
1.6	Forensic Medicine	11
1.7	Food Industry	12
1.8	Numerical Simulation of Cryoaction	13

Part I Action of Low Temperatures in Nature and Medicine

2	Ice Formation in Biological Medium	17
2.1	Amorphous Ice	17
2.2	Water	20
2.3	Biological Water	30
2.4	Crystallization in Heterogeneous Media	33
3	Biological Effects of Low Temperatures	37
3.1	Processes in Cells Under Hypothermia	37
3.1.1	Antifreeze Proteins (AFPs)	41
3.1.2	Ice Nucleating Agents (INAs)	43
3.1.3	Protein Denaturation	47
3.1.4	Membrane Behavior	48
3.2	Cells in Aqueous Solutions	51
3.2.1	Cell Dehydration	53
3.2.2	Intracellular Ice	63
3.2.3	Cryoprotective Agents	70
3.2.4	Cell Interaction with Crystallization Front	75

3.2.5	Vitrification	80
3.3	Cryoaction In Vitro	84
3.4	Cryoaction In Vivo	90

Part II Cryoaction In Silico

A	Note on Modeling and Simulation	95
4	Imitation Models	97
4.1	Intracellular Ice Formation	97
4.2	Cellular Automata and Related Methods in Cryobiology	104
5	Microscopic Models	107
5.1	The Monte Carlo Method	108
5.1.1	Update Algorithms	109
5.2	Molecular Dynamics Methods	110
5.2.1	Classical Molecular Dynamics	110
5.2.2	Ab Initio Molecular Dynamics (AIMD)	112
5.2.3	Acceleration Methods	113
5.2.4	Parallel Computations	113
5.3	Models of Water	115
5.3.1	Interaction Potentials	115
5.3.2	Bulk Water	117
5.3.3	Water Confined Between Surfaces	119
5.3.4	Aqueous Solutions	122
5.4	Ice Crystallization	123
5.4.1	Pure Water	123
5.4.2	Aqueous Solutions	126
5.5	Transport in Small Pores	127
5.6	Protein Denaturation	131
5.7	AFPs and Their Binding to Ice	135
5.7.1	Cryoprotectors	139
6	Macroscopic Models	141
6.1	Freezing of Cell Suspensions	141
6.1.1	Heat Transfer During Cryopreservation of Cells in Solution	141
6.1.2	Coupled Heat and Mass Transfer During Cryopreservation of Cells in Solution	143
6.1.3	Explicit Treatment of “Mushy” Zone	149
6.2	Cell Interaction with Ice Front	150
6.2.1	Migration of Cells in the Solute Concentration Gradient	151

6.2.2	Cell Interaction with the Advancing Plane Crystallization Front	156
6.2.3	Cell in the Freezing Cylindrical Cavity	160
6.3	Heat Transfer in Biological Tissues	161
6.3.1	Heat Transfer in Living Tissues	161
6.3.2	Continuum Models	162
6.3.3	Vascular Models	164
6.3.4	Temperature Fluctuations in Living Tissues	168
6.4	Exact Solutions to the Bioheat Equation	169
6.4.1	Solution of One-Dimensional Multiregion Bioheat Equation	170
6.4.2	Heat Transfer with a Sinusoidal Heat Flux on Skin Surface	174
6.4.3	Freezing of the Cylindrical Tissue Region with a Single Embedded Coaxial Blood Vessel	175
6.4.4	Heat Transfer in a Finite Tissue Region with two Embedded Blood Vessels	176
6.5	Heat Transfer in Cryosurgery	178
6.5.1	Heat Transfer in the Single Probe Cryosurgery System	179
6.5.2	Heat Transfer in the Multiprobe Cryosurgery System	180
6.6	Mechanical Stress in Frozen Biological Objects	189
6.6.1	Stress in Frozen Tissues	189
6.6.2	Stress in Vitrified Biological Objects	191
6.7	Optimization of Cryoaction	193
7	Conclusions	199
A	A Brief History of Cryomedicine	201
A.1	Cryosurgery	203
A.1.1	Cryosurgery Equipment	204
A.2	Low Temperature Preservation	206
A.2.1	CP Procedures	208
A.2.2	CPA solutions	211
B	Simulation of Solidification	215
B.1	Sharp Interface Methods	216
B.1.1	The Classical Stefan Problem	218
B.1.2	Exact solutions	218
B.2	Diffuse Interface Methods	222
C	Thermal Properties of Tissues	225
C.1	Human	226
C.2	Animals	227
C.3	Latent heat	228
