

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	The Fascination of Locomotion	1
1.2	Biologically inspired Robotics	2
1.3	RoboCup	4
1.4	Summary Remarks and a Diagram of the Book	5
<b>2</b>	<b>Mechanical Background</b>	<b>7</b>
2.1	Modeling	7
2.2	Kinematics of Multibody Systems	9
2.2.1	Kinematics of Rigid Bodies	9
2.2.2	Kinematics of Multibody Systems with Open-loop Structures	11
2.2.3	Holonomic and Non-Holonomic Constraints	12
2.3	Dynamics of Multibody Systems	15
2.3.1	Synthetic Method	15
2.3.1.1	Principle of Linear Momentum	15
2.3.1.2	Principle of Angular Momentum	16
2.3.2	Analytical Method	19
2.3.2.1	D’ALEMBERT’s Principle	19
2.3.2.2	LAGRANGE’s Equations of the 2nd Kind	20
2.3.2.3	Multibody Systems with Additional Constraints	23
2.3.2.4	VORONETS’ Equations	25
2.3.2.5	APPELL’s Equations	27
2.4	Forces Related to Locomotion	29
2.4.1	Force of Gravity	29
2.4.2	Spring Force	30
2.4.3	Friction Forces	33
2.4.3.1	General Notes	33
2.4.3.2	Viscous Friction Force	34
2.4.3.3	Dry Friction Force	36
2.4.3.4	An Approach of Mathematical Friction Modeling	41

<b>3</b>	<b>Mathematical Methods and Elements of Control Theory</b>	47
3.1	Modeling	47
3.2	Analysis and Modification of the Model – the Role of an Experiment	48
3.3	Mathematical Methods	48
3.3.1	Perturbation Methods	48
3.3.2	Stability of Stationary Motions	50
3.3.3	Introduction of Dimensionless Variables and Method of Dimensions	55
3.3.4	Remarks on Numerical Methods	59
3.4	Some Aspects from Control Theory	61
3.4.1	Motivating Example and General Formulations	61
3.4.2	Open- and Closed-Loop Control	63
3.4.3	Output Feedback	64
3.4.3.1	Introduction	64
3.4.3.2	Relative Degree	65
3.4.3.3	Minimum-Phase Condition and Invariant Zeros	67
3.4.4	Recapitulatory Example and High-Gain Control	70
<b>4</b>	<b>Wheeled Locomotion Systems – Rolling</b>	73
4.1	Rolling - the Exclusive Engineering Idea for Locomotion	73
4.2	Two-Wheel Planar Mobile Robot	75
4.2.1	Two-Wheel Vehicle Model	76
4.2.2	Kinematics	77
4.2.3	Dynamics	78
4.2.3.1	APPELL's Equations	79
4.2.3.2	LAGRANGE's Equations with Multipliers	85
4.2.3.3	VORONETS' Equations	87
4.2.3.4	Synthetic Method – Basic Theorems of Dynamics	88
4.2.4	Analysis of the Equations of Motion	91
4.3	The Three-Wheel RoboCup Player “Lukas” Utilizing Omnidirectional Wheels	95
4.3.1	Kinematics	95
4.3.2	Dynamics	98
4.3.3	Control of the RoboCup Player “Lukas”	102
4.3.3.1	Velocity Control Loop	104
4.3.3.2	Positioning “Lukas”	104
4.3.3.3	High-Level Tasks	105
4.4	Non-Holonomic Mobile Robot	106
4.4.1	The Idea and Performance of the Mobile Robot	106
4.4.2	Mechanical Model of a Planar Four-Bar Mechanism with Wheels	107
4.4.3	Kinematics of the Mechanism	108
4.4.4	Dynamics of the Mechanism	111
4.4.5	Dynamic Simulations of the Locomotion of the Planar Four-Bar Mechanism with Wheels	116

4.5	Trimaran	118
<b>5</b>	<b>Walking Machines – Walking</b>	<b>125</b>
5.1	Human Walking and Running: History and General Remarks	125
5.2	Dynamic Models of Walking	128
5.2.1	Dynamics of Human Trunk Locomotion	128
5.2.2	Dynamics of Extremities	133
5.2.2.1	Introductory Remarks	133
5.2.2.2	Mathematical and Physical Pendulum	134
5.2.2.3	Double Pendulum	136
5.2.3	Simplest Integrative Model of Walking – Inverted Pendulum	139
5.2.3.1	Inverted Pendulum with Fixed Length	139
5.2.3.2	Inverted Pendulum with Variable Length	140
5.2.3.3	Inverted Double Pendulum	142
5.2.3.4	Inverted Double Pendulum with a Rigid Body	144
5.2.4	The Three-Body Model of Walking	146
5.2.4.1	Kinetic Energy of the Upper Body	147
5.2.4.2	Kinetic and Potential Energies of the Leg	147
5.2.4.3	LAGRANGE's Equations for the Three-Body Model	148
5.2.5	Five-Body Model of a Walking Robot	150
5.2.5.1	Kinetic Energy of a Lower Leg	151
5.2.5.2	Potential Energy of the System and the Generalized Forces	153
5.2.5.3	The Equations of Motion	155
5.3	Robustness and Adaptivity	156
5.4	Generalization – Scaling	158
<b>6</b>	<b>Worm-like Locomotion Systems – Crawling</b>	<b>161</b>
6.1	Modeling Worm-Like Locomotion Systems (WLLS)	161
6.2	Straight Discrete Worms with Contact via Spikes, [137]	163
6.2.1	Kinematics	163
6.2.2	Dynamics	167
6.2.3	Geometric Interpretation of the Results	168
6.3	Straight Discrete Worms with Contact via Dry Friction	170
6.4	Worm-Like Locomotion based on Friction with Anisotropic Friction Coefficients	171
6.4.1	System of Two Mass Points and a Kinematic Drive	171
6.4.2	System of Two Mass Points with a Linear Elastic Element	173
6.4.2.1	Mechanical Model and Equations with a Linear Elastic Element	173
6.4.2.2	Application of the Averaging Method	175
6.4.2.3	Stationary Regime	181
6.4.2.4	Conditions of Stability	183

6.4.3	System with Two Mass Points and a Nonlinear Elastic Element . . . . .	185
6.4.3.1	Equation of Motion . . . . .	185
6.4.3.2	Stationary Regime and Conditions of Stability . . . . .	187
6.4.3.3	Discussion of Results and Graphical Illustrations . . . . .	188
6.4.4	System of $n$ Mass Points with Kinematic Constraints . . . . .	191
6.4.4.1	Mechanical Model and Equations of Motion . . . . .	191
6.4.4.2	Asymptotic Approximation . . . . .	193
6.5	Worm-like Locomotion Based on Periodic Change of Normal Forces . . . . .	200
6.5.1	Introductory Remarks . . . . .	200
6.5.2	Vibration-Driven Robot with One Moveable Internal Mass . . . . .	200
6.5.2.1	Mechanical Model and Equation of Motion . . . . .	200
6.5.2.2	Steady-State Motion of the System in the Case of Small Friction . . . . .	204
6.5.2.3	Vibration-Driven Robot with One Unbalance Exciter . . . . .	208
6.5.2.4	Analysis of the Results . . . . .	211
6.5.3	Vibration-Driven Robot with Two Unbalance Exciters . . . . .	213
6.5.3.1	Mechanical Model and Equations of Motion . . . . .	213
6.5.3.2	Application of the Method of Averaging . . . . .	216
6.5.3.3	Numerical Example . . . . .	222
6.6	Worm-like Locomotion Based on Viscous Friction . . . . .	226
6.6.1	Two Mass Points Subjected to a Kinematic Constraint . . . . .	226
6.6.1.1	Statement of the Problem . . . . .	226
6.6.1.2	Asymptotic Approximation . . . . .	228
6.6.1.3	Steady-State Solution . . . . .	229
6.6.2	A Rigid Body Acted upon by a Periodic Force . . . . .	232
6.6.3	A Rigid Body with a Moving Internal Mass . . . . .	234
6.6.4	Two Bodies Connected by a Spring . . . . .	235
6.6.4.1	Statement of the Problem . . . . .	235
6.6.4.2	Asymptotic Approximation . . . . .	236
6.6.5	System of Three Mass Points with Kinematic Constraints . . . . .	239
6.6.5.1	Equations of Motion . . . . .	239
6.6.5.2	Smooth Control . . . . .	241
6.6.5.3	Motion with Viscous Friction . . . . .	243
6.6.5.4	Comparison between Viscous and Dry Friction . . . . .	244
7	<b>Adaptive Control Approach to Worm-like Locomotion Systems . . . . .</b>	<b>247</b>
7.1	Introductory Remarks . . . . .	247
7.2	The Worm-like Locomotion System as a Dynamic Control System . . . . .	249
7.3	Adaptive High-Gain Control . . . . .	251
7.3.1	Motivation and History . . . . .	251
7.3.2	Control Objective and Adaptation Law . . . . .	252
7.3.3	Feedback and Controllers for Systems with Different Relative Degrees . . . . .	255

7.4	Simulations .....	256
7.4.1	Simulation using a 2-D COULOMB Model .....	257
7.4.1.1	Simulation Data .....	257
7.4.1.2	Tracking of a Time-Shifted Sine Signal .....	257
7.4.1.3	Tracking an “Optimal” Kinematic Gait .....	259
7.4.2	Simulation using a 3-D COULOMB Model .....	261
7.4.2.1	Simulation Data .....	261
7.4.2.2	Tracking of an “Optimal” Kinematic Gait .....	261
7.5	3-D Animations .....	263
<b>8</b>	<b>Prototypes of Worm-Like Locomotion Systems .....</b>	<b>265</b>
8.1	Worm-like Locomotion System with Two Stepping Motors .....	265
8.2	Locomotion Systems with One Unbalance Rotor System .....	267
8.3	Locomotion Systems with Two Unbalance Rotors .....	268
8.4	Vibration-Driven Robot – “MINCH Robot” .....	269
8.5	Miniaturized Vibration-Driven Robot with a Piezo Actuator .....	273
8.6	Worm-like Locomotion System Based on Smart Materials .....	274
	<b>References .....</b>	<b>279</b>
	<b>Index .....</b>	<b>287</b>

Mechanics of Terrestrial Locomotion  
With a Focus on Non-pedal Motion Systems  
Zimmermann, K.; Zeidis, I.; Behn, C.  
2009, XX, 289 p. 205 illus., Hardcover  
ISBN: 978-3-540-88840-6
