

Contents

Introduction	1
Part I Categorical and Operadic Background	
Foreword: Categorical Conventions	17
1 Symmetric Monoidal Categories for Operads	21
2 Symmetric Objects and Functors	35
3 Operads and Algebras in Symmetric Monoidal Categories	53
4 Miscellaneous Structures Associated to Algebras over Operads	77
Bibliographical Comments on Part I	95
Part II The Category of Right Modules over Operads and Functors	
5 Definitions and Basic Constructions	99
6 Tensor Products	107
7 Universal Constructions on Right Modules over Operads	113
8 Adjunction and Embedding Properties	121

9	Algebras in Right Modules over Operads	129
10	Miscellaneous Examples	139
	Bibliographical Comments on Part II	149
	Part III Homotopical Background	
11	Symmetric Monoidal Model Categories for Operads	153
12	The Homotopy of Algebras over Operads	185
13	The (Co)homology of Algebras over Operads – Some Objectives for the Next Part	203
	Bibliographical Comments on Part III	215
	Part IV The Homotopy of Modules over Operads and Functors	
14	The Model Category of Right Modules over an Operad	219
15	Modules and Homotopy Invariance of Functors	225
16	Extension and Restriction Functors and Model Structures	235
17	Miscellaneous Applications	241
	Bibliographical Comments on Part IV	261
	Part V Appendix: Technical Verifications	
	Foreword	265
18	Shifted Modules over Operads and Functors	267
19	Shifted Functors and Pushout-Products	277
20	Applications of Pushout-Products of Shifted Functors	287
	References	291
