

Contents

1	Introduction	1
1.1	A Brief Introduction to Robotic Mapping	2
1.2	The Big Picture	7
2	Perceiving 3D Range Data	9
2.1	Basic Principles	9
2.1.1	Time-of-Flight Measurement	9
2.1.2	Phase-Shift Measurement	10
2.1.3	Triangulation	11
2.2	Laser Scanner	11
2.2.1	1D Laser Measurement System	11
2.2.2	2D Laser Scanner	11
2.2.3	3D Laser Scanner	12
2.2.4	Projection 3D Scanner	14
2.3	Cameras and Camera Models	15
2.3.1	The Pinhole Camera Model and Perspective Projection	16
2.3.2	Stereo Cameras	19
2.4	3D Cameras	26
3	State of the Art	29
3.1	Categorization of Robotic Mapping Algorithms	29
3.1.1	Planar 2D Mapping	29
3.1.2	Planar 3D Mapping	31
3.1.3	Slice-Wise 6D SLAM	32
3.1.4	Full 6D SLAM	32
3.1.5	Recent Trends	32
3.2	Globally Consistent Range Image Alignment	33

4	3D Range Image Registration	35
4.1	The ICP Algorithm	35
4.1.1	Direct Solutions of the ICP Error Function	36
4.1.2	Approximate Solution of the ICP Error Function by a Helical Motion	48
4.1.3	Linearized Solution of the ICP Error Function	50
4.1.4	Computing Closest Points	52
4.1.5	Implementation Issues	64
4.1.6	The Parallel ICP Algorithm	67
4.2	Evaluation of the ICP Algorithm	69
5	Globally Consistent Range Image Registration	77
5.1	Explicit Loop Closing	77
5.1.1	Extrapolating the Odometry to Six Degrees of Freedom	77
5.1.2	Closed Loop Detection	78
5.1.3	Error Diffusion	79
5.2	GraphSLAM as Generalization of Loop Closing	81
5.2.1	Algorithm Overview	81
5.2.2	Probabilistic Global Relaxation Based on Scan Matching	81
5.2.3	Transforming the Solution	87
5.3	Other Modeling Approaches	93
5.3.1	Linearization Using Quaternions	93
5.3.2	GraphSLAM Using Helical Motion	99
5.3.3	GraphSLAM Using Linearization of a Rotation	104
6	Experiments and Results	109
6.1	3D Mapping with Kurt3D	109
6.1.1	The 3D Laser Range Finder	109
6.1.2	The Mobile Robot Kurt3D	110
6.1.3	Full 6D SLAM in a Planar Environment	111
6.1.4	Full 6D SLAM in an Indoor/Outdoor Environment	112
6.1.5	Full 6D SLAM in an Outdoor Environment	114
6.1.6	Kurt3D @ Competitions	121
6.2	Globally Consistent Registration of High Resolution Scans	123
6.3	Mapping Urban Environments – Registration with Dynamic Network Construction	125
6.4	Benchmarking 6D SLAM	130
6.4.1	Ground Truth Experiments	133
6.4.2	The Benchmarking Technique	134
6.4.3	Experimental Results	138
6.4.4	Justification of the Results	141
6.5	Further Applications	145
6.5.1	Mapping Abandoned Mines	145
6.5.2	Applications in Medicine	151

7	3D Maps with Semantics	155
7.1	Scene Interpretation	155
7.1.1	Feature Extraction	155
7.1.2	Interpretation	156
7.1.3	Application: Model Refinement	160
7.2	Object Localization in 3D Data	163
7.2.1	Object Detection	163
7.2.2	Object Localization	169
7.3	Semantic 3D Maps	170
8	Conclusions and Outlook	173
A	Math Appendix	177
A.1	Representing Rotations	177
A.1.1	Euler Angles	177
A.1.2	Axis Angle	178
A.1.3	Unit Quaternions	179
A.1.4	Converting Rotation Representations	181
A.2	Plücker Coordinates	182
A.3	Additional Theorems from Linear Algebra	183
A.4	Solving Linear Systems of Equations	186
A.5	Computing Constrained Extrema	187
A.5.1	Computing the Minimum of a Quadratic Form with Subject to Conditions	188
A.6	Numerical Function Minimization	190
	References	193

3D Robotic Mapping

The Simultaneous Localization and Mapping Problem
with Six Degrees of Freedom

Nüchter, A.

2009, XIX, 204 p., Hardcover

ISBN: 978-3-540-89883-2
