

Contents

1	Introduction	1
1.1	Walking Robots	1
1.1.1	Humanoid Robots	1
1.1.2	Research on Walking Robots	3
1.2	Port-Hamiltonian Modeling and Control	5
1.2.1	Port-Hamiltonian Modeling	5
1.2.2	Port-Hamiltonian Control	10
1.2.3	The European Project GeoPlex	11
1.3	Goals and Outline of This Book	12
2	Modeling of Rigid Mechanisms	15
2.1	Kinematics of Rigid Bodies	16
2.1.1	Pose of a Rigid Body	16
2.1.2	Velocity of a Rigid Body	22
2.2	Kinematics of Rigid Mechanisms	26
2.3	Dynamics of Open Rigid Mechanisms	34
2.3.1	Forces on Rigid Mechanisms	34
2.3.2	Kinetic Co-energy of Rigid Mechanisms	37
2.3.3	Dynamic Equations of Rigid Mechanisms	40
2.4	Kinematic Loops and Nonholonomic Constraints	46
3	Modeling of Compliant and Rigid Contact	55
3.1	Contact Kinematics	56
3.1.1	Direct Derivation for Simple Cases	57
3.1.2	Indirect Derivation for General Case	60
3.2	Compliant Contact	65
3.2.1	Interconnection Structure of Compliant Contact	66
3.2.2	Compliant Contact Forces	72
3.3	Rigid Contact	76

3.3.1	Model Setup	77
3.3.2	Momentum Reset on Impact	79
3.3.3	Constraint Forces during Contact	80
3.3.4	Conditions for Contact Release	81
3.3.5	Extension to Two Contact Points	84
4	Modeling and Analysis of Walking Robots	93
4.1	Gait Search as an Optimization Problem	94
4.2	A Planar Compass-Gait Walker	98
4.2.1	Dynamic Models of the Compass-Gait Walker	98
4.2.2	Analysis of Impact Energy Loss	103
4.2.3	Analysis and Simulation of Passive Dynamic Walking	107
4.3	A Planar Walking Robot with Knees	110
4.3.1	The Walking Robot Dribbel	110
4.3.2	Dynamic Models of Dribbel	112
4.3.3	Impact Analysis and Efficient Walking	116
4.4	A Three-Dimensional Walking Robot	119
4.4.1	Dynamic Models of the Three-Dimensional Robot ...	120
4.4.2	Efficient Walking on Level Ground	123
5	Control of Walking Robots	129
5.1	Passive Mechanical Control	130
5.2	Port-Based Curve Tracking	134
5.2.1	System Representation Encoding Desired Behavior	135
5.2.2	Port-Based Asymptotic Control	139
5.2.3	Application to Walking Robots	146
5.3	Planar Stability Using One Actuator	151
5.3.1	Simulation of a Stabilizing Hip Controller	152
5.3.2	Experimental Implementation and Results	155
5.4	3D Stability by Foot Placement	157
5.4.1	Simplified Model of the 3D Walker	158
5.4.2	Energy Conservation by Ankle Push-Off	160
5.4.3	Lateral Stabilization and Control by Foot Placement	161
6	Conclusions	167
6.1	Conclusions	167
6.2	Recommendations for Future Work	170
A	Mathematical Background	175
A.1	Linear Algebra	175
A.2	Differential Geometry	180
A.3	Lie Groups	182
A.3.1	Definition and Examples	182
A.3.2	Exponential Coordinates	186

Contents	XIII
B Port-Hamiltonian Systems and Bond Graphs	191
B.1 Port-Hamiltonian Systems	191
B.2 Bond Graphs	196
References	201
Index	209

Modeling and Control for Efficient Bipedal Walking
Robots

A Port-Based Approach

Duindam, V.; Stramigioli, S.

2009, XIV, 214 p. 81 illus., Hardcover

ISBN: 978-3-540-89917-4
