

Contents

1	Introduction	1
	Decreasing Resources Consumption by Airplanes, Cars, and Wind	
	Energy Plants	2
2	Industrial Microwave Sources at ISM Frequencies	5
	Possible 24.15 GHz Sources and Their Properties	6
3	Microwave Heating – Dielectric Properties and Energy Conversion	9
	Heating – A General Electromagnetic Problem	9
	Electromagnetic Wave Propagation and Material Interaction	10
	Classical Debye Dissipation Model of Materials	12
	Detailed Consideration on Microwave Heating of Water	13
	Ionic Contribution	13
	A Non Classical Consideration on Microwave Heating of Water	14
	Synthesis of Technical Macromolecular Plastics	17
	Quantum Representation of the Microwave Effective Electric Conductivity	19
4	Efficient Microwave Transmission Devices and Measurements	23
	Standard Rectangular Waveguides	23
	Waveguide Antenna Design	25
	Experimental Verification	30
	Dielectric Measurements and Material Data	31
	Dielectric Measurements	33
5	Avionic Microwave Anti-/De-Icing Systems	35
	Basic Considerations of Icing in Aviation	35
	Microwave Alternative – CAPRI Investigations	38
	Millimetre-Wave Investigations at FZK	39
	Following the CAPRI-Approach	40
	Heating of CFRP Composites	41
	Discussion and Conclusions to the mm-Wave Experiments	
	for Technological Design Preparations	43
	Electrothermal CFRP-Airfoil In-Flight Model	44

Theoretical Basics of Microwave In-Flight Composite Heating	45
Continuous Anti-Icing System Design	49
Frequency Choice	50
Microwave Source	50
Primary Waveguide System Components	52
Secondary Waveguide System Components	53
Power Requirements and Heating Performance	54
Common Aluminum Approach	54
Power Reduction with CFRP-Composites	55
Anti-Icing In-Flight Heating Performance	55
De-Icing Leading Edge System	57
6 Processing Technology for Composite Materials	59
The HEPHAISTOS-Systemline and Technology	62
Microwave Process Development	66
Fundamental Investigations	69
Homogeneous Field Applicator Development	69
Electrothermal Considerations	73
The Temperature Answer of Materials Exposed to a Homogeneous Field	
– Choice of Frequency	76
Basic Investigations for the CFC Curing Process with Microwaves	78
Anisotropic Electromagnetic Effects for CFRP Heating	80
Design and Proof of the Modular 2.45 GHz HEPHAISTOS Conception . .	82
Process Development	86
Development of Thermo-Electric Foils	89
Systematic Material Investigations for Microwave Processed CFC	
Materials	90
7 Summary and Outlook	99
References	103
Index	111

Energy Efficient Microwave Systems
Materials Processing Technologies for Avionic, Mobility
and Environmental Applications

Feher, L.E.

2009, XVI, 114 p., Hardcover

ISBN: 978-3-540-92121-9
