1	Introduction	1
1.1	The Sixth Problem of Hilbert	1
1.1.1	The Mathematical Treatment of the Axioms of Physics	1
1.1.2	From Microscopic to Macroscopic Equations	2
1.2	Formal Study of the Transitions	2
1.2.1	Scalings	3
1.2.2	Hydrodynamic Limits	3
1.3	The Probabilistic Approach	5
1.3.1	The Euler Limit	6
1.3.2	The Incompressible Navier-Stokes Equations	7
1.4	The Analytic Approach	8
1.4.1	Formal Derivations	8
1.4.2	Convergence Proofs Based on Asymptotic Expansions	9
1.4.3	Convergence Proofs Based on Spectral Results	10
1.4.4	A Program of Deriving Weak Solutions	10
2	The Boltzmann Equation and its Formal Hydrodynamic Limits	13
2.1	Formulation and Fundamental Properties of the Boltzmann Equation	15
2.1.1	The Boltzmann Collision Integral	15
2.1.2	Local Conservation Laws	19
2.1.3	Boltzmann's H Theorem	21
2.2	Orders of Magnitude and Qualitative Behaviour of the Boltzmann Equation	22
2.2.1	Nondimensional Form of the Boltzmann Equation	22
2.2.2	Hydrodynamic Regimes	24
2.2.3	Corrections to Hydrodynamic Approximations	27
2.2.4	Taking into Account the Boundary	29

2.3	Mathematical Theories for the Boltzmann Equation	30
2.3.1	Perturbative Framework : Global Existence of Smooth Solutions	30
2.3.2	Physical Framework : Global Existence of Renormalized Solutions	33
2.3.3	Further Results in One Space Dimension	43
3	Mathematical Tools for the Derivation of Hydrodynamic Limits	47
3.1	Physical a Priori Estimates : Definition of Suitable Functional Spaces	47
3.1.1	The Entropy Bound	48
3.1.2	The Darrozès-Guiraud Information	53
3.1.3	The Entropy Dissipation Bound	54
3.2	Properties of the Collision Operator : Relaxation Towards Equilibrium and Regularization in v Variables	56
3.2.1	Some Results in the Non Perturbative Framework	56
3.2.2	Coercivity of the Linearized Collision Operator	58
3.2.3	Improving Integrability with Respect to the v Variables	64
3.3	Properties of the Free Transport Operator : Dispersion and Averaging Lemmas	66
3.3.1	L^2 Averaging Lemmas	67
3.3.2	Dispersive Properties of the Free-Transport Operator	70
3.3.3	L^1 Averaging Lemmas	72
3.3.4	The Case of a Spatial Domain with Boundaries	76
4	The Incompressible Navier-Stokes Limit	79
4.1	Convergence Result : From the Boltzmann Equation to the Incompressible Navier-Stokes-Fourier System	79
4.1.1	Mathematical Theories for the Incompressible Navier-Stokes Equations	79
4.1.2	Analogies with the Scaled Boltzmann Equation	84
4.1.3	Statement of the Result	86
4.2	The Moment Method	89
4.2.1	Description of the Strategy	89
4.2.2	Convergence of the Conservation Defects	92
4.2.3	Decomposition of the Flux Term	97
4.3	Study of the Convection and Diffusion Terms	100
4.3.1	Spatial Regularity Coming from Averaging Lemmas	101
4.3.2	Filtering of Acoustic Waves	104
4.3.3	Convergence of the Nonlinear Convection Term	105
4.3.4	Convergence of the Diffusion Term	109

4.4	Taking into Account Boundary Conditions	111
4.4.1	A Priori Estimates Coming from the Inside	112
4.4.2	A Priori Estimates Coming from the Boundary	115
4.4.3	The Limiting Boundary Conditions	117
5	The Incompressible Euler Limit	121
5.1	Convergence Result : From the Boltzmann Equation to the Incompressible Euler System	121
5.1.1	Mathematical Theories for the Incompressible Euler Equations	121
5.1.2	Analogies with the Scaled Boltzmann Equation	126
5.1.3	The Convergence Results for “Well-Prepared” Initial Data	127
5.1.4	The Convergence Result for General Initial Data	129
5.2	The Relative Entropy Method	131
5.2.1	Description of the Strategy	131
5.2.2	The Stability Inequality in the Framework of Renormalized Solutions	134
5.2.3	The Stability Inequality Under the Additional Integrability Assumption	136
5.3	The Case of “Well-Prepared” Initial Data	139
5.3.1	Control of the Flux Term	139
5.3.2	Proof of Theorem 5.1.8 and Corollary 5.1.9	143
5.4	Taking into Account Acoustic Waves	145
5.4.1	Construction of Approximate Solutions by a Filtering Method	146
5.4.2	Control of the Flux Term and Proof of Convergence	151
5.5	Taking into Account the Knudsen Layer	155
5.5.1	The Refined Stability Inequality	156
5.5.2	Construction of An Approximate Solution	158
5.5.3	Control of the Flux Term and Proof of Convergence	160
6	The Compressible Euler Limit	163
6.1	Mathematical Theories for the Compressible Euler System	163
6.1.1	Local Smooth Solutions	164
6.1.2	Weak and Entropic Solutions	165
6.1.3	Global Entropic Solutions in One Spatial Dimension	165
6.2	Some Perspectives	167
6.2.1	Convergence Towards Smooth Solutions	167
6.2.2	Convergence Towards Weak Solutions in One Space Dimension	167
	Appendix	169
A	Some Consequences of Egorov’s Theorem	169
A.1	The Product Limit Theorem	169
A.2	An Asymptotic Result of Variables Separating	170

B	Classical Trace Results on the Solutions of Transport Equations	171
B.1	Definition of the Trace	172
B.2	Free Transport with Reflection at the Boundary	172
C	Some Consequences of Chacon's Biting Lemma	174
C.1	From Renormalized Convergence to Chacon's Convergence	174
C.2	A Result of Partial Equiintegrability	176
