

Contents

1	Introduction	1
1.1	Background and Motivation	1
1.2	Invitation: A Sample Calculation	3
1.2.1	Zero-Point Energies: Summing $\frac{1}{2}\hbar\omega$	3
1.2.2	From Discrete to Continuous: Phase Shifts and the Density of States	5
1.2.3	Counting States: Levinson's Theorem	6
1.2.4	Divergences: The Born Approximation	7
1.2.5	Computational Techniques	11
	References	12
2	Review of Scattering Theory	15
2.1	Scattering Theory in Arbitrary Dimension	15
2.2	Green's Functions from Scattering Data	18
2.3	Phase Shifts and Density of States	20
2.4	Levinson's Theorem and Finite Energy Sum Rules	23
2.4.1	Overview and Simplified Derivation	24
2.4.2	Proof of the Regular Sum Rules	25
2.4.3	The Symmetric Channel in One Dimension	29
	References	32
3	Quantum Field Theory and the Spectral Method	33
3.1	Small-Amplitude Quantum Corrections	33
3.2	The Canonical Formalism	34
3.2.1	The Vacuum Energy Density	35
3.2.2	The Vacuum Energy	40
3.3	The Path Integral Approach	41
3.4	Connecting the Functional and Canonical Formalisms	43
3.5	Feynman Diagrams and the Born Series	44
3.6	Some Remarks on Renormalization	52
3.7	Quantum Energy of Interfaces	55
3.7.1	The Interface Formula	56
	References	60

4	Applications in One Space Dimension	63
4.1	Vacuum Polarization Energy in Exactly Solvable Models	63
4.2	Fermions in One Spatial Dimension	67
4.2.1	Parity-Invariant Background Fields	67
4.2.2	Fermions in the sine-Gordon Background	70
4.2.3	Fermions in the Kink Background	72
4.3	Bosons, Fermions, Supersymmetry, Central Charge, and the BPS Bound	76
4.3.1	Fermions	76
4.3.2	Supersymmetry and Central Charge	77
4.3.3	SVV Anomaly	81
4.4	Soliton Stabilization by Fermions in $d = 1+1$	82
4.4.1	The One-Loop Effective Energy	85
4.4.2	The Fermion Number	86
4.4.3	Results	86
	References	88
5	Spectral Analysis of Charges	91
5.1	Basic Idea and Derivation	91
5.2	Electrostatics and the Need for Regularization	93
5.3	Chiral Bag Model in One Space Dimension	96
5.4	Chiral Bag Model in Three Space Dimensions	97
	References	101
6	Hedgehog Configurations in $d = 3 + 1$	103
6.1	Chiral Fermions	103
6.1.1	The Model	103
6.1.2	The Fermion Loop	104
6.1.3	Numerical Analysis	110
6.2	$SU_L(2)$ Gauge Theory	116
6.2.1	Classical Sphalerons	117
6.2.2	Energetically Stabilized Solitons	119
6.2.3	The Search for the Soliton	120
6.2.4	Beyond the Spherical Ansatz	127
	References	127
7	Boundary Conditions and Casimir Forces	129
7.1	Dirichlet Conditions from Quantum Field Theory	131
7.2	Rigid Bodies: Dirichlet Points and Parallel Plates	132
7.3	The Casimir Stress on a Dirichlet Ring	136
7.4	Oversubtraction and Diagrammatic Analysis	139
7.5	The Dirichlet Sphere	140
	References	142

8	String-Type Configurations	143
8.1	Flux Tubes in Quantum Electrodynamics	143
8.1.1	The Vortex Configuration	144
8.1.2	The Quantum Energy of the Vortex	144
8.1.3	Subtleties of Configurations with Net Flux and Embedding	146
8.1.4	Numerical Results for the Quantum Energy	148
8.1.5	Quantum Energy Density	151
8.2	Flux Tubes and Strings in the Electroweak Standard Model	153
8.2.1	The Bosonic Sector	154
8.2.2	The String Solutions	155
8.2.3	The Sphaleron Square	155
8.2.4	The Fermion Action	157
8.2.5	Fermions on Strings	158
8.2.6	The Vacuum Polarization Energy	159
8.2.7	Numerical Results	163
	References	168
9	Quantum Corrections to Q-Balls	171
9.1	The Q -Ball	171
9.2	Quantum Corrections	173
9.3	Applications	176
	References	177
	Index	179

Spectral Methods in Quantum Field Theory

Graham, N.; Quandt, M.; Weigel, H.

2009, XI, 182 p. 30 illus., Hardcover

ISBN: 978-3-642-00138-3
