1	A Review of Probability and Stochastic Processes	1
1.1	Set Theory Basics	1
1.1.1	The Venn Diagram and Basic Set Operations	2
1.1.2	Other Set Operations and Properties	3
1.2	Definitions and Axioms of Probability	3
1.3	Counting Methods for Determining Probabilities	5
1.3.1	Distinct Ordered k-Tuples	5
1.3.2	Sampling with Replacement and with Ordering	6
1.3.3	Sampling Without Replacement and with Ordering	6
1.3.4	Permutation of Distinct Objects	6
1.3.5	Sampling Without Replacement and Without Ordering	6
1.3.6	Sampling with Replacement and Without Ordering	7
1.4	Conditional Probability and Bayes Rule	7
	Simulation 1.1 – Conditional Probability	9
1.5	Random Variables	10
1.5.1	The Cumulative Distribution Function	10
1.5.2	Types of Random Variables	12
1.6	Conditional Probability Densities and Mass Functions	16
1.6.1	The Bayes Rule Revisited	16
1.6.2	The Total Probability Theorem Revisited	17
1.7	Statistical Averages of Random Variables	17
1.7.1	Mean of Random Variables	17
1.7.2	Moments of Random Variables	19
1.7.3	Joint Moments of Random Variables	20
1.7.4	The Characteristic and the Moment-Generating Functions	21
1.7.5	Conditional Expected Value	23
1.8	Some Discrete Random Variables	23
1.8.1	Bernoulli Random Variable	23
1.8.2	Binomial Random Variable	24
1.8.3	Geometric Random Variable	24
1.8.4	Poisson Random Variable	25
	Simulation 1.2 – Discrete Random Variables	26

1.9	Some Continuous Random Variables	27
1.9.1	Uniform Random Variable	27
1.9.2	Exponential Random Variable	28
1.9.3	Gaussian Random Variable	29
1.9.4	Rayleigh Random Variable	31
	Simulation 1.3 – Continuous Random Variables	32
1.9.5	Multivariate Gaussian Random Variables	34
1.10	Sum of Random Variables and the Central Limit Theorem	35
1.10.1	Mean and Variance for the Sum of Random Variables	35
1.10.2	Moments of the Sum of Random Variables	36
1.10.3	PDF of the Sum of Random Variables	36
1.10.4	The Central Limit Theorem	37
1.11	Transformations of Random Variables	38
	Simulation 1.4 – A Communication System Analysis	46
1.12	Parameter Estimation via Sample Mean	47
1.12.1	The Sample Mean	48
1.12.2	The Confidence Interval on the Sample Mean	50
	Simulation 1.5 – Confidence Interval on BER Estimations	53
1.12.3	The Law of Large Numbers	54
1.13	Generation of Random Numbers	55
1.13.1	Congruential Methods	56
1.13.2	Inverse CDF Method	56
1.13.3	Acceptance/Rejection Methods	57
1.13.4	Box-Muller Method	58
	Simulation 1.6 – Random Numbers Generation	58
1.14	Random Processes	60
	Simulation 1.7 – The Concept of Random Process	62
1.14.1	Stationarity Classes for Random Processes	63
1.14.2	Averages of Stationary Random Processes	64
	Simulation 1.8 – Estimating Averages of Random Processes	71
1.14.3	Random Processes Through Linear Systems	73
1.14.4	The Gaussian Random Process	76
	Simulation 1.9 – Filtered Complex Gaussian Process	77
1.14.5	Thermal Noise Process	79
1.15	Summary and Further Reading	82
1.16	Additional Problems	83
	References	85
2	Signals and Systems	87
2.1	Signals	87
2.1.1	Classification of Signals	87
2.1.2	Typical Deterministic Signals	90
2.2	Fourier Analysis of Signals	94
2.2.1	Fourier Series	94

Simulation 2.1 – Gibbs Phenomenon	97
2.2.2 Continuous-Time Fourier Transform	100
2.2.3 Discrete-Time Fourier Transform	106
2.2.4 Discrete Fourier Transform	108
Simulation 2.2 – The FFT via VisSim/Comm	111
2.2.5 Laplace and Z-Transforms	113
2.3 Sampling of Deterministic and Random Signals	115
2.3.1 Ideal Sampling of Deterministic Signals	115
2.3.2 Ideal Sampling of Stochastic Processes	117
2.3.3 Practical Sampling	117
Simulation 2.3 – Sampling	120
2.3.4 Analog-to-Digital Conversion	122
Simulation 2.4 – Uniform and Non-uniform Quantization	127
2.4 Linear Systems	130
2.4.1 Time-Domain Characterization of Linear Systems	130
2.4.2 Frequency-Domain Characterization of Linear Systems	132
2.4.3 Classifications and Properties of Linear Systems	135
2.4.4 Mapping a Discrete-Time into a Continuous-Time Frequency	139
Simulation 2.5 – Moving Average Filter	142
2.5 Complex Representation of Signals and Systems	146
Simulation 2.6 – Real Versus Complex Simulation	148
2.6 The Power Spectral Density Revisited	150
2.6.1 The PSD of Passband Signals	150
Simulation 2.7 – Estimating the PSD of Passband Signals	153
2.6.2 Estimation of the PSD via the Periodogram	155
Simulation 2.8 – Periodogram Estimation of the PSD	156
2.6.3 The PSD of Baseband Digital Communication Signals	159
2.7 The Bandwidth of Communication Signals	162
2.7.1 Absolute Bandwidth	162
2.7.2 –3 dB (or Half Power) Bandwidth	163
2.7.3 Equivalent Noise Bandwidth	163
2.7.4 Root Mean Square (<i>rms</i>) Bandwidth	163
2.7.5 Null-to-Null or Main Lobe Bandwidth	164
2.7.6 Spectral Mask	165
2.8 Summary and Further Reading	166
2.9 Additional Problems	166
References	168
3 Communication Channels	171
3.1 Definitions	171
3.1.1 Communication Channel	171
3.1.2 Channel Modeling	174
3.1.3 Channel Sounding	174
3.1.4 Empirical, Deterministic and Stochastic Channel Models	175

3.2	AWGN Channel Model	175
3.2.1	Vector AWGN Channel	176
	Simulation 3.1 – Waveform and Vector Channel Simulation	178
3.3	Discrete Memoryless Channels	180
3.3.1	The Binary Symmetric Channel Revisited	181
	Simulation 3.2 – Waveform and BSC Channel Simulation	181
3.4	Discrete Channels with Memory	183
3.5	Wireline Channels	184
3.5.1	Twisted Pair	184
3.5.2	Coaxial Cable	187
3.5.3	Waveguide	189
3.5.4	Optical Fiber	190
3.5.5	Low-Voltage Power-Line	194
3.6	Wireless Channels	199
3.6.1	Mobile Outdoor Channel	199
	Simulation 3.3 – Large-Scale and Small-Scale Propagation	208
	Simulation 3.4 – Mobile Channel Simulator	217
	Simulation 3.5 – Exploring the Coherence Bandwidth	226
	Simulation 3.6 – Exploring the Coherence Time	227
	Simulation 3.7 – Flat and Frequency Selective Channel	229
	Simulation 3.8 – A Modulated Signal Under Selective Fading	231
3.6.2	Mobile Indoor Channel	232
	Simulation 3.9 – Saleh-Valenzuela Indoor Channel Model	237
3.6.3	Terrestrial Microwave Channel	239
	Simulation 3.10 – Rummier Terrestrial Microwave Channel Model	247
3.6.4	Spatial Wireless Channel Models	250
3.6.5	Other Wireless Channels	252
3.7	Summary and Further Reading	256
3.8	Additional Problems	258

4	Baseband Digital Transmission	265
4.1	Definitions and Typical Baseband Signals	265
4.1.1	Line Codes	266
	Simulation 4.1 – Line Codes	272
4.1.2	M -ary PAM Signaling	273
	Simulation 4.2 – M -ary PAM Signaling	276
4.2	Detection of Baseband Pulses in Noise	278
4.2.1	Modeling and Motivation	278
	Simulation 4.3 – Motivation for Baseband Detection Analysis	279
4.2.2	The Matched Filter	284
	Simulation 4.4 – Pulse Signal-to-Noise Ratio Measurement	286
4.2.3	Equivalence Between the Matched Filter and the Correlator	289
	Simulation 4.5 – Equivalence Matched Filter \times Correlator	292

4.2.4	Error Probability Analysis	294
	Simulation 4.6 – Equivalence Matched Filter \times Correlator Revisited	302
4.2.5	MAP and ML Decision Rules for Binary Transmission	304
4.3	Intersymbol Interference (ISI)	307
4.3.1	Distortion-Free Channel and ISI Channel	307
	Simulation 4.7 – Distortion-Free Channel	310
4.3.2	Nyquist Criterion for ISI-Free Transmission	312
	Simulation 4.8 – Vestigial Symmetry	315
4.3.3	The Raised Cosine Spectrum	317
4.3.4	The Root-Raised Cosine Spectrum	319
	Simulation 4.9 – Nyquist Pulses	320
4.3.5	The Eye Diagram and the Bathtub Diagram	323
	Simulation 4.10 – Eye Diagram for M -PAM Signaling	325
	Simulation 4.11 – Bathtub Diagram for Binary Signaling	331
4.4	Correlative Coding	333
	Simulation 4.12 – Polybinary and Polybipolar Signal Generation	334
4.4.1	Duobinary and Modified Duobinary Signaling	335
4.4.2	Generalized Partial Response Signaling	340
	Simulation 4.13 – Duobinary Signaling Using a Matched Filter	341
4.5	Notions of Channel Equalization	343
4.5.1	Zero Forcing (ZF) Equalization	344
	Simulation 4.14 – ZF Equalization	347
4.5.2	Least Mean Square (LMS) Equalization	349
	Simulation 4.15 – LMS Equalization	354
4.6	Summary and Further Reading	355
4.7	Additional Problems	356
