

CONTENTS

Abstract	viii
Foreword.	ix
Introduction.	xi
 Chapter 1. General	 1
1.1. Atmospheric turbulence	1
1.2. Aircraft vortex wake	4
1.3. Turbulence characteristics of the vortex wake	9
1.4. Present-day methods for numerical simulation of vortex wakes behind trunk-route aircraft	10
 Chapter 2. Discrete vortex method	 13
2.1. Problem statement	13
2.2. Fundamentals of the discrete vortex method	17
2.3. Point vortex	18
2.4. Vortex segment	19
2.5. Closed vortex frame	20
2.6. Numerical modeling of free turbulence in separated and jet flows in the framework of the discrete vortex method	21
 Chapter 3. The near vortex wake behind a single aircraft	 33
3.1. Aircraft geometry representation	33
3.2. Vorticity panel representation	34
3.3. Peculiarities of flow simulation around trunk-route aircraft	34
3.4. The characteristics of the near vortex wake behind some aircraft	35
 Chapter 4. Far vortex wake behind a turbojet aircraft	 39
4.1. The algorithm for computation of the far vortex wake behind aircraft	39

4.2. Mathematical model of the far vortex wake	41
4.3. Check for the existence and uniqueness of the solution	42
4.4. Similarity considerations for flow in the far vortex wake	47
4.5. A universal procedure for transition to the mathematical model of the far vortex wake	50
4.6. Consideration of the state of the atmosphere	53
4.7. Verification of the method and predicted results.	55
4.8. The characteristics of the vortex wake behind the Il-76 aircraft.	57
4.9. The characteristics of the vortex wake behind the An-124, B-747 and A-380 aircraft	61
 Chapter 5. Vortex wakes behind propeller-driven aircraft	 71
5.1. Problem statement	71
5.2. The effect of propellers on the far vortex wake characteristics	72
5.3. On a rational number of vortices for modeling a propeller	76
5.4. Examples of computed far vortex wake characteristics of propeller- driven aircraft in comparison with experimental data	78
5.5. The characteristics of the vortex wake behind the An-26 aircraft.	79
5.6. The characteristics of the vortex wake behind the An-12 aircraft.	84
5.7. The characteristics of the vortex wake behind the C-130 aircraft.	90
 Chapter 6. Wind flow over rough terrain	 99
6.1. Basic conditions	99
6.2. Problem statement	99
6.3. A solution technique. Terrain representation	100
6.4. Examples of air flow computations	100
 Chapter 7. Simulation of the far vortex wake of an aircraft at takeoff and landing	 105
7.1. Problem statement	105
7.2. Simulation of an aircraft's near vortex wake. Linear theory	108
7.3. An approximate computation of an aircraft's far vortex wake	115
7.4. Generation of crossflow by vortex tubes. Turbulent boundary layer computation.	116
7.5. Computation of the far vortex wake behind the B-727 aircraft with account for the effect of the boundary layer on an aerodrome's surface. Comparison between computational results and flight test data.	118
7.6. Computation of the far vortex wake of Russian-built Tu-204 and Il-96 trunk-route aircraft at landing	122
7.7. On the visualization of an aircraft's far vortex wake near the ground	125
7.8. Conclusions and prospects	126

Chapter 8. Aerodynamic loads on aircraft encountering vortex wakes of other aircraft	129
8.1. Problem statement	129
8.2. A solution technique	130
8.3. Verification of the method and predicted results.	131
8.4. The aerodynamic loads on aircraft in the far vortex wakes of preceding aircraft	134
8.5. Prediction of the effect of wind flow over rough terrain on the aerodynamic loads experienced by an aircraft	137
8.6. Numerical prediction of an aircraft's dynamics in a vortex wake	144
References.	149

Vortex wakes of Aircrafts

Ginevsky, A.S.; Zhelannikov, A.I.

2009, XV, 154 p. 162 illus., Hardcover

ISBN: 978-3-642-01759-9
