3	The Dawn of a New Era	75
3.1	The Ultimate Answer to the Earth Age Problem: Radioactivity	75
3.2	The Complicated Structure of the Earth	75
3.3	The Invention of the Cathode Ray Tube	76
3.4	Dispersing Kelvin's Clouds. A New Horizon	77
3.5	Rutherford's 1907 Address	96
3.6	The Atom Is Mostly Empty	99
3.7	Science by Committee	102
3.8	New Elements or Misled by the Stars	104
3.9	The First Atomic Quantum Theory	109
3.10	Kelvin and the Age of the Earth. An Epilog	111
3.11	What We Know Today about the Age of the Earth	112
3.12	Heat Flow	113
4	Towards a Complete Theory of Stellar Structure	115
4.1	Eddington. The First Stellar Model with Radiative Transfer	115
4.2	Stars Are Gaseous	115
4.3	Radiation Pressure Plays a Crucial Role in Stars	116
4.4	Basic Astrophysics: The Stars Obey Our Laws of Physics	119
4.5	Absorption of Radiation. A Key Issue	119
4.6	Two Logical Steps Leading to the Role of Radiation Pressure	120
4.7	Is the Contraction Energy Sufficient?	121
4.8	Some Surprising Expressions	122
4.9	Can We Model the Sun?	122
4.10	The Achilles Heel	122
4.11	The Second Paper	123
4.12	The Mean Molecular Weight	123
4.13	Why Is the Molecular Weight Important for a Star?	124
4.14	A New Phase of Matter	125
4.15	How Much Can a Star Radiate?	127
4.16	Variable Stars as Theory Testers	129
4.17	Leavitt's Cepheid Variable Observations	130
4.18	Some Time Perspectives	132
4.19	A Death Blow to the Binary Hypothesis	133
4.20	The Theory of Stellar Pulsation	135
4.21	Hertzsprung Again. A Small Digression	138
4.22	A Confusing Issue. The Bizarre White Dwarfs	139
4.23	Can We Already Guess What the Energy Source Might Be?	142
4.24	Eddington's Response to Russell	143
4.25	The Components of the Nucleus	144
4.26	Early Hints	146
4.27	Eddington's Presidential Address	148
4.27.1	Predicting Saturation in the Absorption	149
4.27.2	The Prediction of Nuclear Energy and Transmutation of the Elements	151

4.28	Chemical Elements in Equilibrium	153
4.29	Eddington Discovers Kramers' Law	154
4.30	The Universe Has Uniform Composition	155
4.31	Hertzsprung Once More. The Observed Mass–Luminosity Law	157
4.32	Kramers Discovers His Law	159
4.33	Absorption in Strong Radiation Fields	160
4.34	Subatomic Energy in Difficulty	160
4.35	Saha. Getting the Stellar State	161
4.36	The Theoretical Mass–Luminosity Law	163
4.37	Conceptual Difficulties	166
4.38	Objections to the Mass–Luminosity Law	168
4.39	The Writing Was on the Wall	170
4.40	The Russell–Vogt Theorem	171
4.41	The Rosseland Mean: The Situation Worsens	173
4.42	Are the Stars Well Mixed?	174
4.43	The Absorption Coefficient Dispute and the Mass–Luminosity Relation	178
4.44	The Mass–Luminosity Relation Again	179
4.45	How Pristine the Stars Remain	181
4.46	A Devastating Argument	182
4.47	Reaching the Limits of Knowledge	185
4.48	Russell Again. Discovery of the Most Abundant Element in the Solar Atmosphere	186
4.49	Two Birds in a Single Shot	189
4.50	The Hydrogen in the Sun	192
4.51	First Signs of Finer Details	194
4.52	The Cowling Model	195
5	From Chemistry to Dying Stars	197
5.1	The Problem with the Existence of Different Atoms	197
5.2	The Road to the Pauli Principle. The Multi-Electron Atom	197
5.3	The Chemists Have It Differently	198
5.4	The Helium Atom	200
5.5	The Physicists' Approach. Was It Any Better?	201
5.6	Bohr and the Periodic Table	203
5.7	Stoner. Getting Closer	204
5.8	The Pauli Principle	204
5.9	The Unique Behavior of Particles	208
5.10	The Behavior of a Collection of Particles	210
5.11	Why the Difference in Behavior? Why Does PEP Apply?	211
5.12	Why Is There Chemistry? Why Does Matter Have Its Bulky Form?	212
5.13	Observational Limits on the Pauli Principle	214
5.14	Eddington's White Dwarf Paradox	215
5.15	Cracking the Paradox: Ralph Fowler 1926	215
5.16	Pokrowski. A Limit on the Mass of a Collapsed Star	217

5.17	Anderson Expands on Pokrowski's Idea, but Changes the Reasons .	218
5.18	Stoner Again	219
5.19	Anderson	220
5.20	Stoner Responds	221
5.21	Chandrasekhar. The Final and Accurate Answer	224
5.22	What Determines Stellar Masses?	227
5.23	1930. Milne's Attack on Eddington's Stellar Structure	229
5.24	Condensed Models	232
5.25	Independent Derivation of the Limiting Mass	238
5.26	Erupting Stars	242
5.27	The Observations of How Stars Perish	243
5.28	The Transformation of Matter into Neutrons	254
5.29	The Neutron Star	256
5.30	Oppenheimer: The Collapse to a Neutron Star	257
5.31	Back to Observations	259
5.32	Novas and Supernovas Are Not the Same Thing	260
5.33	Clinching the Identification	260
5.34	There Is More Than One Type of Supernova	261
5.35	Is There Any Remnant?	262
5.36	The Discovery of Neutron Stars	263
5.37	Eddington's Objection to the White Dwarf Theory	264
5.38	No Escape for Massive Stars	267
5.39	Newtonian Black Holes versus Einsteinian Black Holes	268
5.40	Schwarzschild. Solving the Einstein Equations	268
5.41	Einstein and Black Holes	271
5.42	Observations of Black Holes	272
6	The Solution to the Stellar Energy Problem	275
6.1	The Quantum Revolution	276
6.2	We Have Already Seen this Movie	278
6.3	Light at the End of the Tunnel	278
6.3.1	Tunneling: The Secret of Stellar and Biological Time Scales .	281
6.3.2	Tunneling Under Stellar Conditions	283
6.4	The Paradox of the Giants	284
6.5	A Snag?	285
6.6	Creation and Annihilation of Matter in Stars. A Brief Comeback . .	286
6.7	The Masses of Nuclei	289
6.8	The Birth of Nuclear Astrophysics	290
6.9	The Idea of Regenerative Synthesis	291
6.10	The $^8\text{Be}_4$ Barrier	294
6.11	The Discovery of the Neutron	300
6.12	New Horizons. Astrophysics	301
6.13	New Horizons. Nuclear Physics	302
6.14	Deuterium Exists and Is Stable	303
6.15	The Weak Force. Key to Stellar Longevity	305

6.16	The Return of Atkinson	308
6.17	The Last Paper on Liquid Stars	310
6.18	The Nuclear Dilemma: Equilibrium Versus Rate	310
6.19	At Last: A Fatal Blow to Classical Mass Annihilation	313
6.20	Back to the Nuclear Barrier	315
6.21	Weizsäcker	317
6.22	The First Paper	317
6.23	The Second Paper	319
6.24	Gamow Again	325
6.25	The Energy Source	326
6.26	A Problem of Stability	327
6.27	Hans Bethe	328
6.28	The First Calculation of the pp Reaction	328
6.29	Hans Bethe and the CN Cycle	332
6.30	Acceptance by the Community and New Puzzles	336
6.31	The Last Piece of Nuclear Data	337
6.32	The First Full Model of the Sun	338
6.33	The Fate of the Sun	339
6.34	Accretion: Revival of Helmholtz?	339
7	How the Low Mass Stars Perish	341
7.1	The Energy Source of White Dwarfs	341
7.2	The Central Stars of Planetary Nebulas	346
7.3	The Harman–Seaton Sequence	354
7.4	Stellar Evolution to PN Formation	362
7.5	Some of the Remaining Problems with the White Dwarfs	364
7.6	Masses of the Central Stars	364
7.7	Shaping the PN	365
7.8	A Few Present Day Challenges for Understanding PNs	366
7.9	From the Vantage Point of Time	366
8	The Life and Death of Massive Stars	369
8.1	New Physics: A Prelude	369
8.2	The Creation of the Weak Interaction Theory	373
8.3	The Evolution of Massive Stars	374
8.4	The Explosive Climax: Properties of the ‘Classical’ Supernovas	378
8.5	Supernova Theory	383
8.6	The Trigger	385
8.7	The Explosion. A History of Unsubstantiated Proclamations	397
8.7.1	Type II SNs	398
8.7.2	Type I SNs	403
8.8	Esoteric Mechanisms?	404
8.9	Peculiar SNs. An Example	405
8.10	Obstacles to Understanding the SN Phenomenon and the Formation of the Elements Beyond C and O	408

8.11	The Light Curve	409
8.12	The Tale of a Recent Supernova. What One Good Case Can Tell Us	413
8.13	Identification and Scattered Records	415
