Executive Summary	xiii
1 Introduction	1
H.-P. Plag, G. Beutler, R. Gross, T. A. Herring, C. Rizos, R. Rummel, D. Sahagian, J. Zumberge	
1.1 The challenge: living on a changing, dynamic planet	1
1.2 The potential: geodesy's contribution to a global society	2
1.3 The observing system: the current development of the Global Geodetic Observing System	7
1.4 The strategy: where to go from here	12
2 The goals, achievements, and tools of modern geodesy	15
H.-P. Plag, Z. Altamimi, S. Bettadpur, G. Beutler, G. Beyerle, A. Cazenave, D. Crossley, A. Donnellan, R. Forsberg, R. Gross, J. Hinderer, A. Komjathy, C. Ma, A. J. Mannucci, C. Noll, A. Nothnagel, E. C. Pavlis, M. Pearlman, P. Poli, U. Schreiber, K. Senior, P. L. Woodworth, S. Zerbini, C. Zuffada	
2.1 Introduction	15
2.2 Geodetic reference systems and frames	18
2.3 The tools and products of modern geodesy	23
2.4 Observing Earth geometry and kinematic	26
2.4.1 Overview	26
2.4.2 Space-geodetic tracking techniques	27
2.4.3 Altimetry	40
2.4.4 GNSS scatterometry and reflectometry	44
2.4.5 Geodetic imaging techniques	50
2.5 Observing Earth's rotation	55
2.5.1 Space-geodetic techniques	55
2.5.2 Ring laser gyroscopes	56
2.6 Observing Earth's gravity field	58
2.6.1 Superconducting gravimetry	58

2.6.2	Absolute gravimetry	60
2.6.3	Land movements and terrestrial gravimetry	61
2.6.4	Airborne gravimetry	62
2.6.5	Satellite missions	64
2.7	Observing time	67
2.7.1	Relativity: proper and coordinate time; realized time scales	67
2.7.2	Geodetic measurements and geodetic coordinates	67
2.7.3	Clocks and geodesy: future trends	68
2.8	Ensuring consistency of the observations of geometry, gravity field, and rotation	69
2.8.1	Consistency through co-location	69
2.8.2	Consistency of data collection and processing: conventions	72
2.9	Essential additional observations and applications	74
2.9.1	Atmospheric sounding	74
2.9.2	Ionospheric remote sensing: one person's signal is another person's noise	77
2.9.3	Tide gauges	80
2.9.4	Geodetic time and frequency transfer	87
3	Understanding a dynamic planet: Earth science requirements for geodesy	89
	R. Rummel, G. Beutler, V. Dehant, R. Gross, K. H. Ilk, H.-P. Plag, P. Poli, M. Rothacher, S. Stein, R. Thomas, P.L. Woodworth, S. Zerbini and V. Zlotnicki	
3.1	Introduction	89
3.2	The scientific and technological challenges for GGOS	90
3.3	Solid Earth physics	94
3.3.1	Plate motion	97
3.3.2	Earthquake and volcano physics	99
3.3.3	Deep Earth dynamics	101
3.3.4	Surface loading	102
3.4	The cryosphere	103
3.5	Ocean processes and their climatological implications	105
3.5.1	Providing the reference frame and the means for precise positioning	105
3.5.2	Altimetry and ocean circulation	106
3.5.3	Satellite gravity, ocean circulation and climate	107
3.5.4	Synergistic combination of measurements	108
3.5.5	Future needs	108
3.6	Studies of weather and climate processes	109
3.6.1	Geo-referencing of all meteorological observations	109
3.6.2	Providing atmospheric weather models with space- and time-varying gravity fields	110

3.6.3	Collecting observations of the upper-atmospheric mass and lower tropospheric water vapor fields	110
3.6.4	Tracking global change in the atmosphere	111
3.7	Sea level change	112
3.7.1	Geo-location of sea and land levels and their changes ...	113
3.7.2	Understanding sea level change	114
3.8	The hydrological cycle	117
3.9	Mass transport and mass anomalies in the Earth system	118
3.9.1	Mass redistributions and geodesy	119
3.10	Earth rotation: understanding Earth system dynamics	123
3.10.1	Earth rotation measurements	123
3.10.2	UT1 and Length-of-Day Variations	124
3.10.3	Polar Motion	127
3.11	Earth rotation: understanding processes in the solid Earth	130
3.11.1	Earth's interior from Earth rotation	130
3.11.2	Geophysical fluids from Earth rotation	131
3.11.3	General remarks	132
4	Maintaining a modern society	135
	C. Rizos, D. Brzezinska, R. Forsberg, G. Johnston, S. Kenyon, D. Smith	
4.1	Spatial data infrastructure	135
4.2	Navigation	139
4.2.1	Marine navigation	140
4.2.2	Air navigation	140
4.2.3	Land navigation	141
4.3	Engineering, surveying and mapping	141
4.3.1	Machine guidance	142
4.3.2	Land titling and development	143
4.3.3	Engineering geodesy and structural monitoring	143
4.3.4	Geographic information systems	144
4.3.5	Height systems	145
4.4	Timing applications	146
4.5	Early warning and emergency management	146
4.6	Infomobility	147
4.7	Management of and access to natural resources	149
4.7.1	Water management and hydrology	149
4.7.2	Energy resources	150
4.8	Monitoring the environment and improving predictability	150
4.8.1	GNSS meteorology	151
4.8.2	Space weather	151
5	Earth observation: Serving the needs of an increasingly global society	153
	D. Sahagian, D. Alsdorf, C. Kreemer, J. Melack, M. Pearlman, H.-P. Plag, P. Poli, S. Reid, M. Rodell, R. Thomas, P. L. Woodworth	
5.1	The current and future framework of global Earth observations ...	153

5.2	Disasters: Reducing loss of life and property from natural and human-made disasters	156
5.2.1	Landslides, rock falls and subsidence	157
5.2.2	Volcanic eruptions	159
5.2.3	Earthquakes	159
5.2.4	Tsunamis	160
5.2.5	Storm surges	165
5.2.6	Flooding	165
5.2.7	The slowly developing disasters: sea level rise	166
5.3	Energy Resources: Improving management of energy resources ..	169
5.4	Climate change: Understanding, assessing, predicting, mitigating, and adopting to climate variability and change	171
5.5	Water: Improving water resource management through better understanding of the water cycle	175
5.5.1	The global hydrological cycle	175
5.5.2	Water for life: the challenge of water management	176
5.5.3	Observations of the Global Water Cycle	178
5.5.4	Slow branch challenges	180
5.5.5	Fast branch challenges	186
5.6	Weather: Improving weather information, forecasting, and warning	190
5.7	Ecosystems: Improving the management and protection of terrestrial, coastal, and marine ecosystems	192
5.7.1	Measurements of CO ₂ spatial and temporal distribution to better understand the Earth's carbon cycle	192
5.7.2	Monitoring wetlands	193
5.8	Agriculture: Supporting sustainable agriculture and combating desertification	193
5.8.1	Monitoring deforestation and logging	194
5.8.2	Agricultural land cover and land use	195
5.8.3	Precision farming	195
6	Geodesy: Foundation for exploring the planets, the solar system and beyond	197
	J. F. Zumberge, J. S. Border, V. Dehant, W. M. Folkner, D. L. Jones, T. Martin-Mur, J. Oberst, J. G. Williams, X. Wu	
6.1	Planetary geodesy	197
6.1.1	Planetary rotation and interior properties	198
6.1.2	Example: Mars	199
6.1.3	Example: Earth's Moon	200
6.1.4	Example: Europa	201
6.1.5	Planetary mapping	201
6.2	Radio science and interferometry	202
6.3	Interplanetary navigation	203
6.3.1	Current and future tracking data types	203

6.3.2	Interplanetary trajectory determination	206
6.3.3	Current and future requirements of GGOS for interplanetary navigation	207
7	Integrated scientific and societal user requirements and functional specifications for the GGOS	209
	R. Gross, G. Beutler, H.-P. Plag	
7.1	Introduction	209
7.2	Summary of user requirements	210
	7.2.1 Societal applications	210
	7.2.2 Earth observations	210
	7.2.3 Natural hazards	211
	7.2.4 Earth science	211
	7.2.5 Lunar and planetary science	212
7.3	Quantitative requirements	214
7.4	Tasks of GGOS	219
7.5	Products available through GGOS	219
7.6	Accuracy of GGOS products	220
7.7	Functional specification for GGOS	221
	7.7.1 Determination, maintenance, and access to the global terrestrial reference frame	221
	7.7.2 Earth rotation	223
	7.7.3 Earth's gravity field	223
	7.7.4 Earth system monitoring: mass transport and mass redistribution	223
	7.7.5 Determination, maintenance, and access to the celestial reference frame	224
7.8	Operational specifications for GGOS	224
8	The future geodetic reference frame	225
	T. A. Herring, Z. Altamimi, H.-P. Plag, P. Poli	
8.1	Introduction	225
8.2	Concept of reference system and reference frame	226
8.3	Future reference frame formulations	229
8.4	Origin and orientation of the TRS	231
8.5	Scientific challenge of the future reference frame: the need for an Earth system model	231
8.6	Towards an Earth system model	232
9	The future Global Geodetic Observing System	237
	M. Rothacher, G. Beutler, D. Behrend, A. Donnellan, J. Hinderer, C. Ma, C. Noll, J. Oberst, M. Pearlman, H.-P. Plag, B. Richter, T. Schöne, G. Tavernier, P. L. Woodworth	
9.1	The overall system design	237
9.2	The overall observing system design: the five levels	240
9.3	Level 1: Ground-based infrastructure	241

9.3.1	Core network of co-located stations	241
9.3.2	VLBI station network	242
9.3.3	SLR/LLR station network	243
9.3.4	GNSS station network	245
9.3.5	DORIS station network	246
9.3.6	Networks of gravimeters	247
9.3.7	Network of tide gauge stations and ocean bottom geodesy	247
9.3.8	Co-location of instruments and auxiliary sensors	248
9.4	Level 2: Low Earth Orbiter satellite missions and their applications	249
9.4.1	Gravity satellite missions	250
9.4.2	Ocean and ice altimetry satellite missions	251
9.4.3	InSAR and optical satellite missions	252
9.4.4	Future satellite mission concepts	253
9.4.5	Co-location onboard satellites	255
9.4.6	Airborne and shipborne sensors	255
9.5	Level 3: GNSS and laser ranging satellites	256
9.5.1	Global Navigation Satellite Systems	256
9.5.2	Laser ranging satellites	257
9.6	Level 4: planetary missions	257
9.7	Level 5: extragalactic objects	259
9.8	GGOS data flow: from measurements to users	260
9.8.1	Data centers and data flow	260
9.8.2	Synergies between observing techniques	262
9.8.3	Operating centers and communications	262
9.8.4	Future technologies and capabilities for data infrastructure	263
9.9	GGOS User Interface: Database, Portal, and Clearinghouse	264
9.9.1	GGOS Portal architecture	265
9.9.2	GGOS Portal goals and objectives	267
9.9.3	A GGOS clearinghouse mechanism for geodesy	267
9.10	Data analysis, combination, modeling, and products	270
10	Towards GGOS in 2020	273
	G. Beutler, M. Pearlman, H.-P. Plag, R. Neilan, M. Rothacher, R. Rummel	
10.1	The GGOS high-level components	273
10.2	Building on the heritage	274
10.2.1	Level 1: the terrestrial geodetic infrastructure	274
10.2.2	Level 2: the LEO satellite missions	276
10.2.3	Level 3: the GNSS and SLR satellites	277
10.2.4	Level 4: lunar and planetary “geodesy” and missions ...	277
10.2.5	Level 5: the extragalactic objects	278

10.3	Organizational considerations	278
10.3.1	History	278
10.3.2	The revolution invoked by space geodesy	278
10.3.3	Current situation	279
10.3.4	Internal organization of GGOS	279
10.3.5	Integration of relevant regional activities	280
10.3.6	Integration of GGOS into global programs	280
11	Recommendations	283
	H.-P. Plag, G. Beutler, R. Gross, T. A. Herring, P. Poli, C. Rizos, M. Rothacher, R. Rummel, D. Sahagian, J. Zumberge
