Preface	VII
1 A Short Biography of Luis A. Santaló	1
2 Scientific Work of Luis A. Santaló	5
3 Some Photographs of Luis A. Santaló	11
4 Luis A. Santaló's Published Work	19
5 List of Santaló's Papers Included in the Selection	39
6 Selected Papers of Luis A. Santaló	43
Part I. Differential Geometry	43
[45.2] Note on convex curves on the hyperbolic plane	47
[50.1] On parallel hypersurfaces in the elliptic and hyperbolic n -dimensional space	55
[62.1] On the Gauss-Bonnet formula for polyhedra in spaces of constant curvature	61
[63.1] A relation between mean curvatures of parallel convex bodies in spaces of constant curvature	73
[67.1] Total absolute curvatures of manifolds contained in a Euclidean space	81
[67.2] Horocycles and convex sets in the hyperbolic plane	91
[68.1] Horospheres and convex bodies in hyperbolic space	97
[69.1] Convexity in the hyperbolic plane	103
[69.2] On some geometric inequalities in the style of Fary	115
[70.1] Mean values and curvatures	123
[74.1] Total curvatures of compact manifolds immersed in Euclidean space	133

Part II. Integral Geometry	161
[36.1] Integral Geometry 7: New applications of the concept of the kinematic measure in the plane and space	167
[41.1] A generalization of a theorem of T. Kubota on ovals	215
[41.2] Proof of a theorem of Bottema on ovals	219
[41.3] A theorem and an inequality referring to rectifiable curves	223
[41.4] Curves of extremal total torsion and D -curves	233
[42.1] Integral formulas in Crofton's style on the sphere and some inequalities referring to spherical curves	253
[42.2] On the isoperimetric inequality for surfaces of constant negative curvature	269
[43.1] Integral Geometry on surfaces of constant negative curvature	285
[44.1] Note on convex spherical curves	303
[45.1] Mean value of the number of regions into which a body in space is divided by n arbitrary planes	311
[47.3] D -curves on cones	317
[49.1] Integral Geometry in three-dimensional spaces of constant curvature	327
[49.2] Integral Geometry on surfaces	349
[50.2] Integral Geometry in general spaces	365
[52.1] Measure of sets of geodesics in a Riemannian space and applications to integral formulas in elliptic and hyperbolic spaces	373
[52.2] Integral Geometry in Hermitian spaces	385
[54.1] Questions of Differential and Integral Geometry in spaces of constant curvature	397
[56.1] On the mean curvatures of a flattened convex body	417
[60.3] Two applications of the Integral Geometry in affine and projective spaces	423
[62.3] On the Kinematic fundamental formula of Integral Geometry for spaces of constant curvature	435
[66.1] Groups in the plane with respect to which sets of points and lines admit an invariant measure	449
[66.2] Average values for polygons formed by random lines in the Hyperbolic plane	473
[75.1] The kinematic formula in Integral Geometry for cylinders	487
[78.1] Sets of segments on surfaces	497
[80.1] Notes on the Integral Geometry in the hyperbolic plane	507
[80.2] Cauchy and Kubota formulas for convex bodies in elliptic n -space	519

Part III. Convex Geometry	527
[40.2] A theorem on sets of parallelepipeds with parallel edges	533
[42.3] Supplement to the note: A theorem on sets of parallelepipeds with parallel edges	543
[46.1] Convex regions on the n -dimensional spherical surface	549
[46.2] On convex bodies with constant width in E_n	561
[49.3] An affine invariant for convex bodies in n -dimensional space	569
[59.1] On complete systems of inequalities among three elements of a plane convex figure	575
[83.1] An inequality between the parts into which a convex body is divided by a plane section	593
[86.1] On the measure of line segments entirely contained in a convex body	601
[88.1] Affine Integral Geometry and convex bodies	613
Part IV. Affine Geometry	619
[46.3] A geometrical characterization for the affine differential invariants of a space curve	621
[47.1] Affine invariants of certain pairs of curves and surfaces	629
[50.3] Integral Geometry in projective and affine spaces	645
[60.1] Steiner formula for parallel surfaces in affine geometry	663
[62.2] On the measure of sets of parallel linear subspaces in affine space	677
Part V. Statistic and Stereology	685
[40.1] Sur quelques problèmes de probabilités géométriques	689
[43.2] On the probable distribution of corpuscles in a body, deduced from the distribution of its sections, and analogous problems	705
[47.2] On the first two moments of the measure of a random set	725
[55.1] On the distribution of sizes of corpuscles contained in a body from the distribution of their sections or projections	739
[72.1] (With Yañez). Averages for polygons formed by random lines in Euclidean and hyperbolic planes	753
[78.2] (With Fava). Plate and line segment processes	771
[79.1] (With Fava). Random processes on manifolds in \mathbf{R}^n	779
[80.3] Random lines and tessellations in a plane	791
[84.1] Mixed random mosaics	803

Contents

7	Comments on Some of Santaló's Papers	809
8	Book Reviews	821
9	On the Correspondence between Santaló and Vidal-Abascal	843
10	Some Remarks on Two Classifications of Santaló's Papers	849
11	Authorization	851
12	Acknowledgements	853

Selected Works

Santaló, L.A. - Naveira, A.M.; Reventós, A. (Eds.)

2009, XII, 854 p., Hardcover

ISBN: 978-3-540-89580-0
