<b>Foreword</b>	<b>v</b>
<b>I Additive Group Theory and Non-unique Factorizations</b> <i>Alfred Geroldinger</i>	<b>1</b>
<b>Introduction</b>	<b>3</b>
<b>Notation</b>	<b>5</b>
<b>1 Basic concepts of non-unique factorizations</b>	<b>7</b>
1.1 Arithmetical invariants . . . . .	9
1.2 Krull monoids . . . . .	13
1.3 Transfer principles . . . . .	16
1.4 Main problems in factorization theory . . . . .	20
<b>2 The Davenport constant and first precise arithmetical results</b>	<b>21</b>
2.1 The Davenport constant . . . . .	21
2.2 Group algebras . . . . .	24
2.3 Arithmetical invariants again . . . . .	29
<b>3 The structure of sets of lengths</b>	<b>35</b>
3.1 Unions of sets of lengths . . . . .	35
3.2 Almost arithmetical multiprogressions . . . . .	38
3.3 The characterization problem . . . . .	42
<b>4 Addition theorems and direct zero-sum problems</b>	<b>45</b>
4.1 The theorems of Kneser and of Kemperman-Scherk . . . . .	45
4.2 On the Erdős–Ginzburg–Ziv constant $s(G)$ and on some of its variants	48
<b>5 Inverse zero-sum problems and arithmetical consequences</b>	<b>57</b>
5.1 Cyclic groups . . . . .	57
5.2 Groups of higher rank . . . . .	70

5.3	Arithmetical consequences . . . . .	75
<b>Bibliography</b>		<b>79</b>
<b>II</b>	<b>Sumsets and Structure</b>	
	<i>Imre Z. Ruzsa</i>	<b>87</b>
<b>Introduction</b>		<b>89</b>
<b>Notation</b>		<b>91</b>
<b>1</b>	<b>Cardinality inequalities</b>	<b>93</b>
1.1	Introduction . . . . .	93
1.2	Plünnecke's method . . . . .	95
1.3	Magnification and disjoint paths . . . . .	97
1.4	Layered product . . . . .	100
1.5	The independent addition graph . . . . .	101
1.6	Different summands . . . . .	102
1.7	Plünnecke's inequality with a large subset . . . . .	104
1.8	Sums and differences . . . . .	106
1.9	Double and triple sums . . . . .	109
1.10	$A + B$ and $A + 2B$ . . . . .	111
1.11	On the non-commutative case . . . . .	114
<b>2</b>	<b>Structure of sets with few sums</b>	<b>119</b>
2.1	Introduction . . . . .	119
2.2	Torsion groups . . . . .	122
2.3	Freiman isomorphism and small models . . . . .	125
2.4	Elements of Fourier analysis on groups . . . . .	128
2.5	Bohr sets in sumsets . . . . .	132
2.6	Some facts from the geometry of numbers . . . . .	134
2.7	A generalized arithmetical progression in a Bohr set . . . . .	135
2.8	Freiman's theorem . . . . .	138
2.9	Arithmetic progressions in sets with small sumset . . . . .	139
<b>3</b>	<b>Location and sumsets</b>	<b>141</b>
3.1	Introduction . . . . .	141
3.2	The Cauchy–Davenport inequality . . . . .	142
3.3	Kneser's theorem . . . . .	143
3.4	Sumsets and diameter, part 1 . . . . .	146
3.5	The impact function . . . . .	147
3.6	Estimates for the impact function in one dimension . . . . .	149
3.7	Multi-dimensional sets . . . . .	152
3.8	Results using cardinality and dimension . . . . .	154

3.9	The impact function and the hull volume . . . . .	157
3.10	The impact volume . . . . .	159
3.11	Hovanskii's theorem . . . . .	163
<b>4</b>	<b>Density</b>	<b>167</b>
4.1	Asymptotic and Schnirelmann density . . . . .	167
4.2	Schirelmann's inequality . . . . .	169
4.3	Mann's theorem . . . . .	171
4.4	Schnirelmann's theorem revisited . . . . .	173
4.5	Kneser's theorem, density form . . . . .	177
4.6	Adding a basis: Erdős' theorem . . . . .	177
4.7	Adding a basis: Plünnecke's theorem, density form . . . . .	179
4.8	Adding the set of squares or primes . . . . .	182
4.9	Essential components . . . . .	184
<b>5</b>	<b>Measure and topology</b>	<b>185</b>
5.1	Introduction . . . . .	185
5.2	Raikov's theorem and generalizations . . . . .	185
5.3	The impact function . . . . .	187
5.4	Meditation on convexity and dimension . . . . .	188
5.5	Topologies on integers . . . . .	191
5.6	The finest compactification . . . . .	193
5.7	Banach density . . . . .	194
5.8	The difference set topology . . . . .	196
	<b>Exercises</b>	<b>199</b>
	<b>Bibliography</b>	<b>207</b>
<b>III</b>	<b>Thematic seminars</b>	<b>211</b>
<b>1</b>	<b>A survey on additive and multiplicative decompositions of sumsets and of shifted sets, <i>Christian Elsholtz</i></b>	<b>213</b>
1.1	Introduction . . . . .	213
1.2	Part I . . . . .	214
1.2.1	Multiplicative decompositions of sumsets . . . . .	214
1.2.2	Multiplicative decompositions of shifted sets . . . . .	216
1.2.3	Some background from sieve methods . . . . .	217
1.2.4	Proof of Theorem ?? . . . . .	219
1.3	Part II . . . . .	222
1.3.1	Sumsets . . . . .	222
1.3.2	Counting methods . . . . .	222
1.3.3	A result from extremal graph theory . . . . .	223

1.3.4	The case of primes . . . . .	225
1.3.5	Chains of primes in arithmetic progressions . . . . .	226
	Bibliography . . . . .	229
<b>2</b>	<b>On the detailed structure of sets with small additive property,</b>	
	<i>Gregory A. Freiman</i> . . . . .	<b>233</b>
2.1	Small doubling . . . . .	233
2.2	Sums of different sets . . . . .	237
	Bibliography . . . . .	239
<b>3</b>	<b>The isoperimetric method,</b>	
	<i>Yahya O. Hamidoune</i> . . . . .	<b>241</b>
3.1	Universal bounds of set products . . . . .	241
3.2	The Frobenius problem . . . . .	243
3.3	The $\alpha + \beta$ -theorems . . . . .	244
	3.3.1 Direct theorems . . . . .	244
	3.3.2 Inverse theorems . . . . .	245
3.4	Torsion-free groups: The isoperimetric approach . . . . .	246
3.5	The isoperimetric formalism . . . . .	248
3.6	The structure of $k$ -atoms . . . . .	250
	Bibliography . . . . .	251
<b>4</b>	<b>Additive structure of difference sets,</b>	
	<i>Norbert Hegyvári</i> . . . . .	<b>253</b>
4.1	Introduction . . . . .	253
4.2	The case $D(A)$ . . . . .	255
4.3	An intermezzo; $D(D(A))$ is highly well structured . . . . .	258
4.4	First difference sets and Bohr sets I . . . . .	258
4.5	Raimi's theorem; difference set of partitions . . . . .	261
4.6	First difference sets and Bohr sets II; Følner's theorem . . . . .	263
4.7	Applications of Følner theorem . . . . .	263
	Bibliography . . . . .	265
<b>5</b>	<b>The polynomial method in additive combinatorics,</b>	
	<i>Gyula Károlyi</i> . . . . .	<b>267</b>
5.1	Introduction . . . . .	267
5.2	Applications of the polynomial method to additive problems . . . . .	271
5.3	Appendix: The Vandermonde matrix . . . . .	275
	Bibliography . . . . .	277
<b>6</b>	<b>Problems in additive number theory, III,</b>	
	<i>Melvyn B. Nathanson</i> . . . . .	<b>279</b>
6.1	What sets are sumsets? . . . . .	279
6.2	Describing the structure of $hA$ as $h \rightarrow \infty$ . . . . .	280

6.3	Representation functions . . . . .	280
6.4	Sets with more sums than differences . . . . .	282
6.5	Comparative theory of linear forms . . . . .	284
6.6	The fundamental theorem of additive number theory . . . . .	286
6.7	Thin asymptotic bases . . . . .	287
6.8	Minimal asymptotic bases . . . . .	288
6.9	Maximal asymptotic non-bases . . . . .	289
6.10	Complementing sets of integers . . . . .	290
6.11	The Caccetta–Häggkvist conjecture . . . . .	293
	Bibliography . . . . .	295
<b>7</b>	<b>Incidences and the spectra of graphs,</b>	
	<i>Jozsef Solymosi</i>	<b>299</b>
7.1	Introduction . . . . .	299
7.2	The sum-product problem . . . . .	300
7.2.1	The sum-product graph . . . . .	301
7.2.2	The spectral bound . . . . .	303
7.3	Three-term arithmetic progressions . . . . .	304
7.3.1	The 3-AP graph . . . . .	304
7.4	Sidon functions . . . . .	306
7.4.1	Sidon functions . . . . .	306
7.4.2	A bipartite incidence graph . . . . .	308
7.4.3	The spectral bound . . . . .	309
7.5	Incidence bounds on pseudolines . . . . .	310
7.5.1	The incidence bound . . . . .	310
7.5.2	Strongly regular graphs . . . . .	311
	Bibliography . . . . .	313
<b>8</b>	<b>Multi-dimensional inverse additive problems,</b>	
	<i>Yonutz V. Stanchescu</i>	<b>315</b>
8.1	Direct and inverse problems of additive and combinatorial number theory . . . . .	315
8.2	The simplest inverse problem for sums of sets in several dimensions	316
8.3	Small doubling property on the plane . . . . .	318
8.4	Planar sets with no three collinear points on a line . . . . .	321
8.5	Exact structure results . . . . .	323
8.6	Difference sets . . . . .	324
8.7	Finite Abelian groups . . . . .	325
	Bibliography . . . . .	327

Combinatorial Number Theory and Additive Group  
Theory

Geroldinger, A.; Ruzsa, I.

2009, XI, 330 p., Softcover

ISBN: 978-3-7643-8961-1

A product of Birkhäuser Basel
