## Part I Basic Techniques

<b>1 Hilbert Space Techniques</b>	
1.1 The projection on a closed convex set . . . . .	3
1.2 The Riesz representation theorem . . . . .	6
1.3 The Lax–Milgram theorem . . . . .	8
1.4 Convergence techniques . . . . .	10
Exercises . . . . .	11
<b>2 A Survey of Essential Analysis</b>	
2.1 $L^p$ -techniques . . . . .	13
2.2 Introduction to distributions . . . . .	18
2.3 Sobolev Spaces . . . . .	22
Exercises . . . . .	32
<b>3 Weak Formulation of Elliptic Problems</b>	
3.1 Motivation . . . . .	35
3.2 The weak formulation . . . . .	38
Exercises . . . . .	41
<b>4 Elliptic Problems in Divergence Form</b>	
4.1 Weak formulation . . . . .	43
4.2 The weak maximum principle . . . . .	49
4.3 Inhomogeneous problems . . . . .	53
Exercises . . . . .	54
<b>5 Singular Perturbation Problems</b>	
5.1 A prototype of a singular perturbation problem . . . . .	57
5.2 Anisotropic singular perturbation problems . . . . .	61
Exercises . . . . .	69

<b>6 Problems in Large Cylinders</b>	
6.1 A model problem . . . . .	73
6.2 Another type of convergence . . . . .	79
6.3 The general case . . . . .	82
6.4 An application . . . . .	86
Exercises . . . . .	89
<b>7 Periodic Problems</b>	
7.1 A general theory . . . . .	93
7.2 Some additional remarks . . . . .	101
Exercises . . . . .	103
<b>8 Homogenization</b>	
8.1 More on periodic functions . . . . .	106
8.2 Homogenization of elliptic equations . . . . .	109
8.2.1 The one-dimensional case . . . . .	109
8.2.2 The $n$ -dimensional case . . . . .	112
Exercises . . . . .	119
<b>9 Eigenvalues</b>	
9.1 The one-dimensional case . . . . .	121
9.2 The higher-dimensional case . . . . .	123
9.3 An application . . . . .	127
Exercises . . . . .	128
<b>10 Numerical Computations</b>	
10.1 The finite difference method . . . . .	129
10.2 The finite element method . . . . .	135
Exercises . . . . .	147

## Part II More Advanced Theory

<b>11 Nonlinear Problems</b>	
11.1 Monotone methods . . . . .	153
11.2 Quasilinear equations . . . . .	160
11.3 Nonlocal problems . . . . .	166
11.4 Variational inequalities . . . . .	170
Exercises . . . . .	174

**12  $L^\infty$ -estimates**

12.1	Some simple cases . . . . .	177
12.2	A more involved estimate . . . . .	180
12.3	The Sobolev–Gagliardo–Nirenberg inequality . . . . .	183
12.4	The maximum principle on small domains . . . . .	187
	Exercises . . . . .	188

**13 Linear Elliptic Systems**

13.1	The general framework . . . . .	191
13.2	Some examples . . . . .	197
	Exercises . . . . .	202

**14 The Stationary Navier–Stokes System**

14.1	Introduction . . . . .	203
14.2	Existence and uniqueness result . . . . .	205
	Exercises . . . . .	208

**15 Some More Spaces**

15.1	Motivation . . . . .	211
15.2	Essential features of the Sobolev spaces $W^{k,p}$ . . . . .	212
15.3	An application . . . . .	215
	Exercises . . . . .	216

**16 Regularity Theory**

16.1	Introduction . . . . .	217
16.2	The translation method . . . . .	221
16.3	Regularity of functions in Sobolev spaces . . . . .	224
16.4	The bootstrap technique . . . . .	227
	Exercises . . . . .	229

**17 The p-Laplace Equation**

17.1	A minimization technique . . . . .	231
17.2	A weak maximum principle and its consequences . . . . .	237
17.3	A generalization of the Lax–Milgram theorem . . . . .	239
	Exercises . . . . .	245

**18 The Strong Maximum Principle**

18.1	A first version of the maximum principle . . . . .	247
18.2	The Hopf maximum principle . . . . .	252
18.3	Application: the moving plane technique . . . . .	255
	Exercises . . . . .	259

**19 Problems in the Whole Space**

19.1 The harmonic functions, Liouville theorem . . . . .	261
19.2 The Schrödinger equation . . . . .	267
Exercises . . . . .	273

---

**Appendix: Fixed Point Theorems**

A.1 The Brouwer fixed point theorem . . . . .	275
A.2 The Schauder fixed point theorem . . . . .	279
Exercises . . . . .	280

<b>Bibliography</b> . . . . .	281
-------------------------------	-----

<b>Index</b> . . . . .	287
------------------------	-----
