

Contents

Introduction	1
1 General notation and quoted results	15
2 Frobenius P -categories: the first definition	27
3 The Frobenius P -category of a block	39
4 Nilcentralized, selfcentralizing and intersected objects in Frobenius P -categories	47
5 Alperin fusions in Frobenius P -categories	57
6 Exterior quotient of a Frobenius P -category over the selfcentralizing objects	73
7 Nilcentralized and selfcentralizing Brauer pairs in blocks	93
8 Decompositions for Dade P -algebras	103
9 Polarizations for Dade P -algebras	117
10 A gluing theorem for Dade P -algebras	137
11 The nilcentralized chain k^* -functor of a block	151
12 Quotients and normal subcategories in Frobenius P -categories	179
13 The hyperfocal subcategory of a Frobenius P -category	195
14 The Grothendieck groups of a Frobenius P -category	211
15 Reduction results for Grothendieck groups	241
16 The local-global question: reduction to the simple groups	287
17 Localities associated with a Frobenius P -category	319
18 The localizers in a Frobenius P -category	333
19 Solvability for Frobenius P -categories	361
20 A perfect \mathcal{F} -locality from a perfect \mathcal{F}^{sc} -locality	369
21 Frobenius P -categories: the second definition	389
22 The basic \mathcal{F} -locality	397
23 Narrowing the basic \mathcal{F}^{sc} -locality	409
24 Looking for a perfect \mathcal{F}^{sc} -locality	437
Appendix	449
