1	Introduction	1
	Matilde Bini, Paola Monari, Domenico Piccolo and Luigi Salmaso	
1.1	Generalized linear latent variable models	1
1.2	Multilevel models	5
1.2.1	Multilevel mixture factor models	6
1.3	Choices and conjoint analysis: critical aspects and recent developments	7
1.4	Robust diagnostic analysis with forward search	8
1.5	Nonparametric combination of dependent permutation tests and rankings	10
1.5.1	Introduction to permutation tests	11
1.5.2	Multivariate permutation tests and nonparametric combination methodology	12
1.5.3	Nonparametric combination of dependent rankings	14
2	Latent variable models for ordinal data	17
	Silvia Cagnone, Stefania Mignani and Irini Moustaki	
2.1	Introduction	17
2.2	The GLLVM for ordinal data	18
2.2.1	Model specification	18
2.2.2	Model estimation	19
2.3	The goodness-of-fit of the model	21
2.3.1	The problem of sparseness	21
2.3.2	An overall goodness-of-fit test	23
2.4	GLLVM for longitudinal ordinal data	24
2.5	Case study: perceptions of prejudice on American campus	25
2.6	Concluding remarks	28
3	Issues on item response theory modelling	29
	Mariagiulia Matteucci, Stefania Mignani and Bernard P. Veldkamp	
3.1	Introduction	29

3.2	Basics of item response theory	30
3.2.1	Parameter estimation	32
3.3	Advances in IRT: some issues	36
3.3.1	Multidimensionality	37
3.3.2	Incomplete design	40
3.3.3	Inclusion of prior information	41
3.4	Case study: prior information in educational assessment	43
3.5	Concluding remarks	44
4	Nonlinearity in the analysis of longitudinal data	47
	Estela Bee Dagum, Silvia Bianconcini and Paola Monari	
4.1	Introduction	47
4.2	Latent curve models	48
4.2.1	Estimation	50
4.3	Modelling nonlinearity in latent curve models	50
4.3.1	Polynomial trajectories	51
4.3.2	Exponential trajectories	52
4.3.3	Complex nonlinear curves	53
4.4	Case study: analysis of university student achievements	55
4.4.1	The data	55
4.4.2	Results	57
4.5	Concluding remarks	60
5	Multilevel models for the evaluation of educational institutions: a review	61
	Leonardo Grilli and Carla Rampichini	
5.1	The evaluation of educational institutions	61
5.2	Effectiveness	62
5.2.1	The value-added approach	64
5.2.2	Type A and type B effectiveness	64
5.3	Multilevel models as a tool for measuring effectiveness	65
5.3.1	The random intercept model	66
5.3.2	The random slope model	69
5.3.3	Cross-level interactions	69
5.3.4	Fixed versus random effects	70
5.3.5	Non-linear and multivariate multilevel models	71
5.3.6	Multilevel models for non-hierarchical structures	72
5.4	Issues in model specification	72
5.4.1	Simple versus complex models	72
5.4.2	To adjust or not to adjust?	73
5.4.3	Endogeneity	74
5.4.4	Modelling the achievement progress	75
5.4.5	Measurement error	76
5.5	Use of the model results	77
5.5.1	Ranking the schools	77

5.5.2	Predicting the outcome	79
5.6	Concluding remarks	79
6	Multilevel mixture factor models for the evaluation of educational programs' effectiveness	81
	Roberta Varriale and Caterina Giusti	
6.1	Introduction	81
6.2	The multilevel mixture factor model	82
6.3	The Generalized Latent Variable framework	85
6.4	Likelihood, estimation and posterior analysis	87
6.5	Model selection	90
6.6	Case study	91
7	A class of statistical models for evaluating services and performances	99
	Marcella Corduas, Maria Iannario and Domenico Piccolo	
7.1	Introduction	99
7.2	Unobserved components in the evaluation process	100
7.2.1	Rationale for a new class of models	101
7.3	Specification and properties of CUB models	102
7.4	Inferential issues and numerical procedures	106
7.4.1	The EM algorithm	106
7.4.2	Fitting measures	109
7.5	Fields of application	110
7.6	Further developments: a clustering approach	111
7.7	Case study	112
7.8	Concluding remarks	117
8	Choices and conjoint analysis: critical aspects and recent developments	119
	Rossella Berni and Riccardo Rivello	
8.1	Introduction	119
8.2	Literature review	120
8.2.1	Choice Experiment: theory and advances	123
8.2.2	Conjoint Analysis: theory and advances	128
8.3	Our proposal: conjoint analysis and response surface methodology	130
8.3.1	The outlined theory	130
8.3.2	The searching of the best profile through optimization	132
8.4	Case study	133
8.4.1	Optimization results	134
8.5	Concluding remarks	137
9	Robust diagnostics in university performance studies	139
	Matilde Bini, Bruno Bertaccini and Silvia Bacci	
9.1	Introduction	139
9.2	Robust methods vs diagnostic analysis	142

9.2.1	The Forward Search algorithm	145
9.3	The Forward Search for Generalized Linear Models	146
9.3.1	Robust GLMs for the university effectiveness evaluation. The case of the first year college drop out rate	147
9.4	The Forward Search for ANOVA models	153
9.4.1	The Forward Search for the fixed effects ANOVA	154
9.4.2	The Forward Search for the random effects ANOVA	156
9.4.3	The use of the robust ANOVA for the evaluation of the Italian university reform	158
9.5	Concluding remarks	159
10	A novel global performance score with an application to the evaluation of new detergents	161
	Stefano Bonnini, Livio Corain, Antonio Cordellina, Anna Crestana, Remigio Musci and Luigi Salmaso	
10.1	Introduction	161
10.2	Composite indexes	163
10.2.1	Standardization: data transformations to obtain homogeneous variables	163
10.2.2	Aggregation: synthesis of information	165
10.3	Global performance score	167
10.3.1	Global score on primary performance	167
10.3.2	Global score on secondary performance	169
10.3.3	Aggregation of GSP and GSS	170
10.4	Case study: comparative performance evaluations of new detergents	170
10.5	A comparative simulation study	173
10.6	Conclusions	176
11	Nonparametric tests for the randomized complete block design with ordered categorical variables	181
	Livio Corain and Luigi Salmaso	
11.1	Introduction	181
11.2	Overview on procedures proposed in the literature for the RCB design	182
11.3	Permutation tests for multivariate RCB design	185
11.4	Simulation study	188
11.5	Case study	190
11.6	Conclusions	192
12	A permutation test for umbrella alternatives	193
	Dario Basso, Fortunato Pesarin and Luigi Salmaso	
12.1	Introduction	193
12.2	Simple stochastic ordering alternatives	196
12.3	Permutation test for umbrella alternatives	199
12.4	Simulation study	201
12.5	Case study: graduates in engineering	204

13 Nonparametric methods for measuring concordance between rankings: a case study on the evaluation of professional profiles of municipal directors 209
Rosa Arboretti Giancristofaro, Mario Bolzan and Livio Corain

13.1 Introduction 209

13.2 Sample survey of municipal directors’ professional profiles 210

13.2.1 Context of the evaluation of the role of Communes and of municipal directors 210

13.2.2 Sample survey among Communes of the Veneto 211

13.3 Analysis of concordance between rankings 212

13.3.1 The construction of ranks 212

13.3.2 Hypothesis testing on concordance between rankings.... 213

13.3.3 Closed testing procedure 216

13.3.4 Rankings of the municipal director’s professional profile in the Communes of the Veneto survey 219

13.3.5 Discussion 220
