

CONTENTS

1 Introduction 1

1.1 Gender Differences in Mortality after CABG 1

1.2 Gender Aspects of Risk Factors 3

1.2.1 Somatic Risk Factors 3

1.2.2 Psychosocial Risk Factors 6

1.3 Outcome Measures 13

1.3.1 Mortality 13

1.3.2 Quality of Life 13

1.3.3 Depression 15

2 Hypotheses 16

2.1 Gender Differences in Risk Factors and Outcomes 16

2.2 Moderator Hypotheses 17

2.3 Mediator Hypotheses 17

3 Method 18

3.1 Participants 18

3.1.1 Recruitment Procedures 18

3.1.2 Inclusion/Exclusion Criteria 18

3.2 Measurements 19

3.2.1 Outcome Parameters 19

3.2.2 Sociodemographic Data 19

3.2.3 Clinical Data 20

3.2.4 Psychosocial Variables 20

3.3 General Statistical Procedures 23

3.3.1 Missing Values 24

3.3.2 Statistical Procedures 24

3.4 Sample 26

3.4.1 Sample Size 26

3.4.2 Drop-out Analysis 27

3.4.3 Sociodemographic Data 29

4	Results	30
4.1	Predictors of Mortality and Physical Functioning Based on Preoperative Data	30
4.1.1	Description of Predictors	30
4.1.2	Predicting Mortality	38
4.1.3	Predicting Physical Functioning	44
4.2	Predictors of Well-Being Based on Longitudinal Data	48
4.2.1	Description of Predictors	49
4.2.2	Stress Factors after Surgery	54
4.3	Predictive Relationship between Physical Functioning and Depression	58
5	Discussion	62
5.1	Gender Differences in Outcome	62
5.1.1	Clinical Risk Factors	63
5.1.2	Sociodemographic Risk Factors	64
5.1.3	Preoperative Depression and Anxiety	67
5.2	Gender Aspects in Recovery	69
5.2.1	Domestic Work	69
5.2.2	Changes in Physical Functioning and Depression	70
5.3	Is Depression Predictive for Physical Functioning?	72
5.4	Limitations	73
5.5	Clinical Implications	75
5.6	Conclusion	78
6	Summary	79
7	Zusammenfassung	81
8	References	83
8.1	Literature	83
8.2	Tables	95
8.3	Figures	97
	Appendix	98
	Acknowledgements	98

Gender and Recovery from Coronary Artery Bypass
Surgery

A Psychological Perspective

Kendel, F.

2009, VIII, 104 p. 11 illus., 8 illus. in color., Softcover
