# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	General	1
1.2	Random Mechanical Vibration	5
1.3	Random Acoustic Vibration	5
1.4	Statistical Energy Analysis	6
1.5	Fokker-Planck-Kolmogorov Equation	6

---

## Part I Random Mechanical Vibration

---

<b>2</b>	<b>Linear Random Vibration Systems</b>	<b>9</b>
2.1	Introduction	9
2.2	Probability	9
	Problems	14
2.3	Random Process	16
2.3.1	Power Spectral Density	20
2.3.2	Measurement of PSD	30
2.3.3	Discrete Fourier Transform	31
2.3.4	Evaluation of the Autocorrelation Function	32
2.3.5	Evaluation of the PSD	32
2.3.6	Digital Simulation of a Random Process	35
	Problems	35
2.4	Deterministic Linear Dynamic Systems	37
2.4.1	Force Loaded SDOF System	39
	Problems	45
2.4.2	SDOF with Enforced Acceleration	46
2.4.3	Multi-Inputs and Single Output (MISO)	52
2.4.4	Unit Load Random Vibration Responses	53
	Problems	54
2.5	Deterministic MDOF Linear Dynamic Systems	56

2.5.1	Random Forces .....	56
2.5.2	MDOF System Loaded by Random Enforced Acceleration .....	59
2.5.3	Random Forces and Stresses .....	62
Problems	.....	68
2.6	Complex Modal Analysis, Lyapunov's Equation .....	70
2.6.1	State-Space Equation .....	70
2.6.2	Enforced Acceleration .....	74
2.6.3	Derivation of Miles' Equation .....	82
2.6.4	Power Transfer Between Two Oscillators .....	83
2.6.5	Augmented State-Space Equation under Non-White Excitation .....	87
Problems	.....	98
2.7	Limit Load Factors .....	104
2.7.1	Introduction .....	104
2.7.2	Equations of Motion 2 SDOF System .....	105
2.7.3	Frequency Transfer Function .....	107
2.7.4	Random Responses .....	108
2.7.5	Feedback Factor .....	109
2.7.6	Limit Load Factors .....	111
2.8	Force-Limit Prediction Methods .....	112
2.8.1	Introduction .....	112
2.8.2	Simple Coupled 2DOF System .....	113
2.8.3	Complex Coupled Two-SDOF System .....	120
2.8.4	Semi-Empirical Method .....	129
Problems	.....	131
2.9	Analysis of Narrow-Band Processes .....	133
2.9.1	Crossings .....	134
2.9.2	Peaks .....	138
2.9.3	Fatigue Damage due to Random Loads .....	140
Problems	.....	143
2.10	Wide-Band Fatigue Damage .....	146
Problems	.....	149
2.11	Practical Aspects Enforced Acceleration .....	150
Problems	.....	155
2.12	3-Sigma Strength Verification .....	156
2.12.1	Strength Verification .....	157
2.12.2	Estimation of Payload Random Vibration Load Factors for Structure Design .....	160
2.12.3	Random Vibration Input Reduction .....	167
2.12.4	Acceleration Response Curve .....	170
2.12.5	Random Response Spectrum .....	171
2.12.6	Relating Random to Sinusoidal Vibration .....	172
2.12.7	Method for Calculating rms Von Mises Stress .....	175
Problems	.....	183

2.12.8 Random Vibration Component Test Specification . . . . .	185
2.13 Random Responses Analysis in the Time Domain . . . . .	185
2.13.1 Introduction . . . . .	185
2.13.2 Simulation of the Random Time Series . . . . .	186
Problems . . . . .	199

---

## Part II Acoustic Random Vibration

---

<b>3 Low Frequency Acoustic Loads . . . . .</b>	<b>203</b>
3.1 Introduction . . . . .	203
3.2 Acoustic Loads . . . . .	203
Problems . . . . .	206
3.3 Response Analysis . . . . .	207
Problems . . . . .	217
3.4 Modal Damping . . . . .	220
3.5 Simplified Acoustic Response Analysis . . . . .	221
3.5.1 Introduction . . . . .	221
3.5.2 Acoustic Loads Transformed into Mechanical Random Vibrations . . . . .	221
3.5.3 The Stress in an Acoustically Loaded Panel . . . . .	225
3.5.4 Acoustic and Random Vibration Test Tailoring . . . . .	226
Problems . . . . .	232
3.6 Fluid Structure Interaction . . . . .	233
3.6.1 Introduction . . . . .	233
3.6.2 Wave Equation . . . . .	233
3.6.3 Pressure Structure Interaction . . . . .	240
3.6.4 Structural Responses . . . . .	241

---

## Part III Statistical Energy Analysis

---

<b>4 Statistical Energy Analysis . . . . .</b>	<b>251</b>
4.1 Introduction . . . . .	251
4.2 Some Basics about Averaged Quantities . . . . .	251
4.3 Two Coupled Oscillators . . . . .	256
4.4 Multimode Systems . . . . .	264
4.5 SEA Parameters . . . . .	269
4.5.1 Dissipation Loss Factor . . . . .	269
4.5.2 Coupling Loss Factor . . . . .	272
4.5.3 Modal Densities . . . . .	283
4.5.4 Subsystem Energies . . . . .	291
4.5.5 Source Power Inputs . . . . .	294
4.5.6 Stresses and Strains . . . . .	295
4.5.7 Non-resonant Response . . . . .	297

4.6	Applications .....	299
4.6.1	Panel in an Acoustic Field .....	299
4.6.2	Sandwich Panels .....	299
4.7	Test-Based SEA Equations .....	304
4.8	SEA Strategy .....	312
	Problems .....	313

---

## Part IV Fokker-Planck-Kolmogorov Method or Diffusion Equation Method

---

<b>5</b>	<b>Fokker-Planck-Kolmogorov Method or Diffusion Equation Method .....</b>	<b>323</b>
5.1	Introduction .....	323
5.2	Probability Theory .....	324
5.3	Markoff Process .....	325
5.4	Smoluchowki or Chapman-Kolmogorov Equation .....	326
5.5	Derivation of the Fokker-Planck-Kolmogorov Equation .....	327
5.5.1	Calculation of FPK Equation Coefficients .....	335
5.5.2	Exact Stationary Response Solutions of Nonlinear Dynamic Systems .....	338
5.5.3	Stationary Solution FPK Equation of Conservative Systems .....	342
5.5.4	High-Order System (MDOF) .....	344
5.6	Itô-Stratonovich Dilemma in Stochastic Processes .....	346
5.7	Behavior of Linear Systems with Random Parametric Excitation .....	357
5.7.1	Moments and Autocorrelation .....	359
5.8	Generation FPK Equation for MDOF Systems .....	362
	Problems .....	365
5.9	Numerical Solution of the FPK Equation .....	373
5.9.1	Solution of the FPK Equation by the Finite Element Method .....	373
5.9.2	General Finite Element Approach .....	373
	Problems .....	384
5.9.3	Solution of the FPK Equation by the Finite Difference Method .....	386
5.9.4	Boundary Conditions Numerical Solution FPK Equation .....	390
	Problems .....	392
5.10	Applications .....	394
5.10.1	Vibrating Thin Plates Exposed to Acoustic Loads .....	394
<b>A</b>	<b>Simulation of the Random Time Series .....</b>	<b>405</b>
	Problems .....	408

<b>B</b>	<b>Tables of Integrals</b> .....	409
	B.1 Approximations of Inverse Transform of the Standard Normal .....	411
	B.2 Integrals of Probability Density Functions .....	411
<b>C</b>	<b>Some Fourier Transforms</b> .....	413
	Problems .....	416
<b>D</b>	<b>Modal Effective Mass</b> .....	417
	Problems .....	421
<b>E</b>	<b>Thevenin's and Norton's Theorems for Equivalent Linear Mechanical</b> .....	425
	Problems .....	428
<b>F</b>	<b>Lyapunov's Equation</b> .....	429
<b>G</b>	<b>Correlation Coefficients</b> .....	435
<b>H</b>	<b>Approximations for the Joint Acceptance and Acoustic Response Analysis</b> .....	439
	H.1 Theory .....	439
	Problems .....	446
<b>I</b>	<b>Simplification of Conductance</b> .....	449
<b>J</b>	<b>Modal Density of Composite Sandwich Panels</b> .....	451
	J.1 Equation of Motion .....	451
	J.2 Modal Density .....	453
<b>K</b>	<b>Wave Propagation and Group Velocity</b> .....	459
<b>L</b>	<b>Finite Difference Approximations for Various Orders</b> .....	467
	L.1 Introduction .....	467
	L.2 Second Order Approximation .....	467
	L.3 Fourth Order Approximation .....	468
	L.4 Sixth Order Approximation .....	468
	L.5 Eighth Order Approximation .....	468
	L.5.1 Tenth Order Approximation .....	468
	L.5.2 Stability .....	469
	Problems .....	469
<b>M</b>	<b>The Galerkin Method</b> .....	471
	Problems .....	475

<b>N</b>	<b>Wiener Process, Stochastic Integrals, Stochastic Differential Equations</b> .....	481
	N.1 Wiener Process .....	481
	N.2 Itô versus Stratonovich .....	483
	N.3 Stochastic Integrals .....	488
	N.4 Correlation Function .....	490
	Problems .....	491
<b>O</b>	<b>Glossary</b> .....	493
	<b>References</b> .....	499
	<b>Index</b> .....	513
