<b>Preface</b> .....	xiii
<b>1 Introduction</b> .....	1
1.1 Brief History of the Calculus of Variations and Optimal Control....	2
1.2 The Brachistochrone Problem .....	4
1.3 Optimal Economic Growth .....	5
1.3.1 Ramsey’s 1928 Model.....	5
1.3.2 Neoclassical Optimal Growth.....	6
1.4 Regional Allocation of Public Investment .....	7
1.4.1 The Dynamics of Capital Formation.....	8
1.4.2 Population Dynamics.....	10
1.4.3 Technological Change.....	12
1.4.4 Criterion Functional and Final Form of the Model .....	13
1.5 Dynamic Telecommunications Flow Routing.....	14
1.5.1 Assumptions and Notation .....	14
1.5.2 Flow Propagation Mechanism .....	15
1.5.3 Path Delay Operators .....	17
1.5.4 Dynamic System Optimal Flows .....	18
1.5.5 Additional Constraints .....	18
1.5.6 Final Form of the Model .....	20
1.6 Brief History of Dynamic Games .....	20
1.7 Dynamic User Equilibrium for Vehicular Networks.....	21
1.8 Dynamic Oligopolistic Network Competition .....	22
1.8.1 Notation .....	23
1.8.2 Extremal Problems and the Nash Game .....	23
1.8.3 Differential Variational Inequality Formulation.....	26
1.9 Revenue Management and Nonlinear Pricing .....	27
1.9.1 The Decision Environment.....	27
1.9.2 The Role of Denial-of-Service Costs and Refunds .....	29
1.9.3 Firms’ Extremal Problem .....	29
1.10 The Material Ahead .....	30
List of References Cited and Additional Reading.....	31

<b>2</b>	<b>Nonlinear Programming and Discrete-Time Optimal Control</b> .....	33
2.1	Nonlinear Program Defined .....	34
2.2	Other Types of Mathematical Programs .....	35
2.3	Necessary Conditions for an Unconstrained Minimum .....	37
2.4	Necessary Conditions for a Constrained Minimum .....	38
2.4.1	The Fritz John Conditions .....	38
2.4.2	Geometry of the Kuhn-Tucker Conditions .....	39
2.4.3	The Lagrange Multiplier Rule .....	41
2.4.4	Motivating the Kuhn-Tucker Conditions .....	43
2.5	Formal Derivation of the Kuhn-Tucker Conditions .....	46
2.5.1	Cones and Optimality .....	47
2.5.2	Theorems of the Alternative .....	48
2.5.3	The Fritz John Conditions Again .....	49
2.5.4	The Kuhn-Tucker Conditions Again .....	50
2.6	Sufficiency, Convexity, and Uniqueness .....	52
2.6.1	Quadratic Forms .....	52
2.6.2	Concave and Convex Functions .....	53
2.6.3	Kuhn-Tucker Conditions Sufficient .....	58
2.7	Generalized Convexity and Sufficiency .....	60
2.8	Numerical and Graphical Examples .....	62
2.8.1	LP Graphical Solution .....	62
2.8.2	NLP Graphical Example .....	64
2.8.3	Nonconvex, Nongraphical Example .....	66
2.8.4	A Convex, Nongraphical Example .....	68
2.9	Discrete-Time Optimal Control .....	69
2.9.1	Necessary Conditions .....	71
2.9.2	The Minimum Principle .....	74
2.9.3	Discrete Optimal Control Example .....	75
2.10	Exercises .....	77
	List of References Cited and Additional Reading .....	78
<b>3</b>	<b>Foundations of the Calculus of Variations and Optimal Control</b> .....	79
3.1	The Calculus of Variations .....	80
3.1.1	The Space $C^1 [t_0, t_f]$ .....	80
3.1.2	The Concept of a Variation .....	80
3.1.3	Fundamental Lemma of the Calculus of Variations .....	82
3.1.4	Derivation of the Euler-Lagrange Equation .....	85
3.1.5	Additional Necessary Conditions in the Calculus of Variations .....	87
3.1.6	Sufficiency in the Calculus of Variations .....	93
3.1.7	Free Endpoint Conditions in the Calculus of Variations ....	95
3.1.8	Isoperimetric Problems in the Calculus of Variations .....	95
3.1.9	The Beltrami Identity for $\frac{\partial f_0}{\partial t} = 0$ .....	96

- 3.2 Calculus of Variations Examples ..... 97
  - 3.2.1 Example of Fixed Endpoints in the Calculus of Variations. 98
  - 3.2.2 Example of Free Endpoints in the Calculus of Variations .. 99
  - 3.2.3 The Brachistochrone Problem .....100
- 3.3 Continuous-Time Optimal Control .....103
  - 3.3.1 Necessary Conditions for Continuous-Time Optimal Control .....105
  - 3.3.2 Necessary Conditions with Fixed Terminal Time, No Terminal Cost, and No Terminal Constraints ....109
  - 3.3.3 Necessary Conditions When the Terminal Time Is Free.....111
  - 3.3.4 Necessary Conditions for Problems with Interior Point Constraints .....113
  - 3.3.5 Dynamic Programming and Optimal Control .....114
  - 3.3.6 Second-Order Variations in Optimal Control .....117
  - 3.3.7 Singular Controls .....119
  - 3.3.8 Sufficiency in Optimal Control .....120
- 3.4 Optimal Control Examples .....124
  - 3.4.1 Simple Example of the Minimum Principle .....124
  - 3.4.2 An Example Involving Singular Controls .....127
  - 3.4.3 Approximate Solution of Optimal Control Problems by Time Discretization .....130
  - 3.4.4 A Two-Point Boundary-Value Problem .....130
  - 3.4.5 Example with Free Terminal Time .....134
- 3.5 The Linear-Quadratic Optimal Control Problem .....138
  - 3.5.1 LQP Optimality Conditions .....138
  - 3.5.2 The HJPDE and Separation of Variables for the LQP .....140
  - 3.5.3 LQP Numerical Example.....141
  - 3.5.4 Another LQP Example .....142
- 3.6 Exercises .....144
- List of References Cited and Additional Reading .....145
  
- 4 Infinite Dimensional Mathematical Programming .....147**
  - 4.1 Elements of Functional Analysis .....148
    - 4.1.1 Notation and Elementary Concepts .....148
    - 4.1.2 Topological Vector Spaces .....149
    - 4.1.3 Convexity .....157
    - 4.1.4 The Hahn-Banach Theorem .....158
    - 4.1.5 Gâteaux Derivatives and the Gradient of a Functional .....159
    - 4.1.6 The Fréchet Derivative .....162
  - 4.2 Variational Inequalities and Constrained Optimization of Functionals .....163
  - 4.3 Continuous-Time Optimal Control .....165
    - 4.3.1 Analysis Based on the G-Derivative .....166
    - 4.3.2 Variational Inequalities as Necessary Conditions .....169

4.4	Optimal Control with Time Shifts .....	174
4.4.1	Some Preliminaries .....	175
4.4.2	The Optimal Control Problem of Interest .....	176
4.4.3	Change of Variable .....	176
4.4.4	Necessary Conditions for Time-Shifted Problems .....	177
4.4.5	A Simple Abstract Example .....	183
4.5	Derivation of the Euler-Lagrange Equation .....	185
4.6	Kuhn-Tucker Conditions for Hilbert Spaces .....	186
4.7	Mathematical Programming Algorithms .....	190
4.7.1	The Steepest Descent Algorithm .....	190
4.7.2	The Projected Gradient Algorithm .....	198
4.7.3	Penalty Function Methods .....	204
4.7.4	Example of the Steepest Descent Algorithm .....	206
4.7.5	Example of the Gradient Projection Algorithm .....	209
4.7.6	Penalty Function Example .....	214
4.8	Exercises .....	216
	List of References Cited and Additional Reading .....	217
<b>5</b>	<b>Finite Dimensional Variational Inequalities and Nash Equilibria</b> .....	<b>219</b>
5.1	Some Basic Notions .....	220
5.2	Nash Equilibria and Normal Form Games .....	220
5.3	Some Related Nonextremal Problems .....	222
5.3.1	Nonextremal Problems and Programs .....	223
5.3.2	Kuhn-Tucker Conditions for Variational Inequalities .....	224
5.3.3	Variational Inequality and Complementarity Problem Generalizations .....	226
5.3.4	Relationships Among Nonextremal Problems .....	226
5.3.5	Variational Inequality Representation of Nash Equilibrium .....	231
5.3.6	User Equilibrium .....	231
5.3.7	Existence and Uniqueness .....	235
5.4	Sensitivity Analysis of Variational Inequalities .....	237
5.5	The Diagonalization Algorithm .....	239
5.5.1	The Algorithm .....	241
5.5.2	Convergence of Diagonalization .....	242
5.5.3	A Nonnetwork Example of Diagonalization .....	243
5.6	Gap Function Methods for $VI(F, \Lambda)$ .....	248
5.6.1	Gap Function Defined .....	248
5.6.2	The Auslender Gap Function .....	249
5.6.3	Fukushima-Auchmuty Gap Functions .....	250
5.6.4	The D-Gap Function .....	251
5.6.5	Gap Function Numerical Example .....	253
5.7	Other Algorithms for $VI(F, \Lambda)$ .....	255
5.7.1	Methods Based on Differential Equations .....	256
5.7.2	Fixed-Point Methods .....	257

5.7.3	Generalized Linear Methods .....	258
5.7.4	Successive Linearization with Lemke’s Method .....	259
5.8	Computing Network User Equilibria .....	260
5.9	Exercises .....	263
	List of References Cited and Additional Reading .....	263
<b>6</b>	<b>Differential Variational Inequalities and Differential Nash Games .....</b>	<b>267</b>
6.1	Infinite-Dimensional Variational Inequalities .....	268
6.2	Differential Variational Inequalities .....	271
6.2.1	Problem Definition .....	271
6.2.2	Naming Conventions .....	272
6.2.3	Regularity Conditions for $DVI(F, f, \Psi, U, x_0, t_0, t_f)$ .....	273
6.2.4	Necessary Conditions .....	274
6.2.5	Existence .....	276
6.2.6	Nonlinear Complementarity Reformulation .....	276
6.3	Differential Nash Games .....	277
6.3.1	Differential Nash Equilibrium .....	277
6.3.2	Generalized Differential Nash Equilibrium .....	281
6.4	Fixed-Point Algorithm .....	282
6.4.1	Formulation .....	282
6.4.2	The Unembellished Algorithm .....	283
6.4.3	Solving the SubProblems .....	286
6.4.4	Numerical Example .....	287
6.5	Descent in Hilbert Space with Gap Functions .....	289
6.5.1	Gap Functions in Hilbert Spaces .....	289
6.5.2	D-gap Equivalent Optimal Control Problem .....	292
6.5.3	Numerical Example .....	297
6.6	Differential Variational Inequalities with Time Shifts .....	298
6.6.1	Necessary Conditions .....	300
6.6.2	Fixed-Point Formulation and Algorithm .....	303
6.6.3	Time-Shifted Numerical Examples .....	305
6.7	Exercises .....	310
	List of References Cited and Additional Reading .....	311
<b>7</b>	<b>Optimal Economic Growth .....</b>	<b>313</b>
7.1	Alternative Models of Optimal Economic Growth .....	314
7.1.1	Ramsey’s 1928 Model .....	314
7.1.2	Optimal Growth with the Harrod-Domar Model .....	315
7.1.3	Neoclassical Optimal Growth .....	316
7.2	Optimal Regional Growth Based on the Harrod-Domar Model .....	318
7.2.1	Tax Rate as the Control .....	325
7.2.2	Tax Rate and Public Investment as Controls .....	328
7.2.3	Equal Public and Private Savings Ratios .....	333
7.2.4	Sufficiency .....	339

7.3	A Computable Theory of Regional Public Investment Allocation ...	343
7.3.1	The Dynamics of Capital Formation.....	344
7.3.2	Population Dynamics .....	345
7.3.3	Technological Change .....	347
7.3.4	Criterion Functional and Final Form of the Model .....	348
7.3.5	Numerical Example Solved by Time Discretization .....	349
7.4	Exercises.....	350
	List of References Cited and Additional Reading .....	351
<b>8</b>	<b>Production Planning, Oligopoly and Supply Chains .....</b>	<b>353</b>
8.1	The Aspatial Price-Taking Firm .....	354
8.1.1	Optimal Control Problem for Aspatial Perfect Competition .....	355
8.1.2	Numerical Example of Aspatial Perfect Competition .....	355
8.1.3	The Aspatial Price Taking Firm with a Terminal Constraint on Inventory .....	358
8.2	The Aspatial Monopolistic Firm.....	362
8.2.1	Necessary Conditions for the Aspatial Monopoly .....	363
8.2.2	Numerical Example .....	364
8.3	The Monopolistic Firm in a Network Economy .....	367
8.3.1	The Network Firm's Extremal Problem .....	367
8.3.2	Discrete-Time Approximation .....	370
8.3.3	Numerical Example .....	371
8.3.4	Solution by Discrete-Time Approximation.....	373
8.3.5	Solution by Continuous-Time Gradient Projection .....	373
8.4	Dynamic Oligopolistic Spatial Competition .....	376
8.4.1	Some Background and Notation .....	377
8.4.2	The Firm's Objective and Constraints .....	378
8.4.3	The DVI Formulation.....	380
8.4.4	Discrete-Time Approximation .....	384
8.4.5	A Comment About Path Variables .....	386
8.4.6	Numerical Example .....	386
8.4.7	Interpretation of Numerical Results .....	389
8.5	Competitive Supply Chains .....	395
8.5.1	Inverse Demands.....	395
8.5.2	Producers' Extremal Problem .....	396
8.5.3	Retailers' Extremal Problem .....	399
8.5.4	Supply Chain Extremal Problem.....	400
8.5.5	The Differential Variational Inequality .....	401
8.5.6	The DVI.....	404
8.5.7	Numerical Example .....	405
8.6	Exercises.....	408
	List of References Cited and Additional Reading .....	409

- 9 Dynamic User Equilibrium** .....411
  - 9.1 Some Background .....412
  - 9.2 Arc Dynamics .....413
    - 9.2.1 Dynamics Based on Arc Exit Flow Functions .....413
    - 9.2.2 Dynamics with Controlled Entrance and Exit Flows .....414
    - 9.2.3 Cell Transmission Dynamics.....415
    - 9.2.4 Dynamics Based on Arc Exit Time Functions .....416
    - 9.2.5 Constrained Dynamics Based on Proper Flow  
Propagation Constraints .....418
  - 9.3 The Measure-Theoretic Nature of DUE.....421
  - 9.4 The Infinite-Dimensional Variational Inequality Formulation .....423
  - 9.5 When Delays Are Exogenous.....428
  - 9.6 When the Delay Operators Are Endogenous.....435
    - 9.6.1 Nested Operators .....437
    - 9.6.2 The Problem Setting .....438
    - 9.6.3 Analysis .....439
    - 9.6.4 Computation with Endogenous Delay Operators .....445
  - 9.7 Conclusions.....452
  - 9.8 Exercises .....453
  - List of References Cited and Additional Reading .....455
  
- 10 Dynamic Pricing and Revenue Management** .....457
  - 10.1 Dynamic Pricing with Fixed Inventories .....458
    - 10.1.1 Infinite-Dimensional Variational Inequality Formulation ..460
    - 10.1.2 Restatement of the Isoperimetric Constraints .....463
    - 10.1.3 Differential Variational Inequality Formulation .....464
    - 10.1.4 Numerical Example .....464
  - 10.2 Revenue Management as an Evolutionary Game .....467
    - 10.2.1 Assumptions and Notation .....468
    - 10.2.2 Demand Dynamics .....469
    - 10.2.3 Constraints .....470
    - 10.2.4 The Firm’s Optimal Control Problem .....471
    - 10.2.5 Differential Quasivariational Inequality Formulation.....473
    - 10.2.6 Numerical Example .....475
  - 10.3 Network Revenue Management .....481
    - 10.3.1 Discrete-Time Notation .....481
    - 10.3.2 Demand Functions.....483
    - 10.3.3 Denial-of-Service Costs and Refunds .....485
    - 10.3.4 Firms’ Extremal Problem .....485
    - 10.3.5 Market Equilibrium Problem  
as a Quasivariational Inequality.....487
    - 10.3.6 Numerical Example .....488
  - 10.4 Exercises .....490
  - List of References Cited and Additional Reading .....492
  
- Index** .....495
