Part A Analysis

1	Review	3
1.1	Calculus	3
1.2	Linear Algebra	5
1.3	Appendix: Equivalence Relations	7
2	The Real Numbers	9
2.1	An Overview of the Real Numbers	9
2.2	The Real Numbers and Their Arithmetic	10
2.3	The Least Upper Bound Principle	13
2.4	Limits	15
2.5	Basic Properties of Limits	19
2.6	Monotone Sequences	20
2.7	Subsequences	23
2.8	Cauchy Sequences	27
2.9	Countable Sets	31
3	Series	35
3.1	Convergent Series	35
3.2	Convergence Tests for Series	39
3.3	Absolute and Conditional Convergence	44

4	Topology of \mathbb{R}^n	48
4.1	n -Dimensional Space	48
4.2	Convergence and Completeness in \mathbb{R}^n	52
4.3	Closed and Open Subsets of \mathbb{R}^n	56
4.4	Compact Sets and the Heine–Borel Theorem	61
5	Functions	67
5.1	Limits and Continuity	67
5.2	Discontinuous Functions	72
5.3	Properties of Continuous Functions	77
5.4	Compactness and Extreme Values	80
5.5	Uniform Continuity	82
5.6	The Intermediate Value Theorem	88
5.7	Monotone Functions	90
6	Differentiation and Integration	94
6.1	Differentiable Functions	94
6.2	The Mean Value Theorem	99
6.3	Riemann Integration	103
6.4	The Fundamental Theorem of Calculus	109
7	Norms and Inner Products	113
7.1	Normed Vector Spaces	113
7.2	Topology in Normed Spaces	117
7.3	Finite-Dimensional Normed Spaces	120
7.4	Inner Product Spaces	124
7.5	Finite Orthonormal Sets	128
7.6	Fourier Series	132
7.7	Orthogonal Expansions and Hilbert Spaces	136
8	Limits of Functions	142
8.1	Limits of Functions	142
8.2	Uniform Convergence and Continuity	147
8.3	Uniform Convergence and Integration	150
8.4	Series of Functions	154
8.5	Power Series	161
8.6	Compactness and Subsets of $C(K)$	168
9	Metric Spaces	175
9.1	Definitions and Examples	175
9.2	Compact Metric Spaces	180
9.3	Complete Metric Spaces	183

Part B Applications

10	Approximation by Polynomials	189
10.1	Taylor Series	189
10.2	How Not to Approximate a Function	198
10.3	Bernstein's Proof of the Weierstrass Theorem	201
10.4	Accuracy of Approximation	204
10.5	Existence of Best Approximations	207
10.6	Characterizing Best Approximations	211
10.7	Expansions Using Chebyshev Polynomials	217
10.8	Splines	223
10.9	Uniform Approximation by Splines	231
10.10	The Stone–Weierstrass Theorem	235
11	Discrete Dynamical Systems	240
11.1	Fixed Points and the Contraction Principle	241
11.2	Newton's Method	252
11.3	Orbits of a Dynamical System	257
11.4	Periodic Points	262
11.5	Chaotic Systems	269
11.6	Topological Conjugacy	277
11.7	Iterated Function Systems	285
12	Differential Equations	293
12.1	Integral Equations and Contractions	293
12.2	Calculus of Vector-Valued Functions	297
12.3	Differential Equations and Fixed Points	300
12.4	Solutions of Differential Equations	304
12.5	Local Solutions	309
12.6	Linear Differential Equations	316
12.7	Perturbation and Stability of DEs	320
12.8	Existence Without Uniqueness	324
13	Fourier Series and Physics	328
13.1	The Steady-State Heat Equation	328
13.2	Formal Solution	332
13.3	Convergence in the Open Disk	334
13.4	The Poisson Formula	337
13.5	Poisson's Theorem	341
13.6	The Maximum Principle	345
13.7	The Vibrating String (Formal Solution)	347
13.8	The Vibrating String (Rigorous Solution)	353
13.9	Appendix: The Complex Exponential	356

14	Fourier Series and Approximation	360
14.1	The Riemann–Lebesgue Lemma	360
14.2	Pointwise Convergence of Fourier Series	364
14.3	Gibbs’s Phenomenon	372
14.4	Cesàro Summation of Fourier Series	376
14.5	Least Squares Approximations	383
14.6	The Isoperimetric Problem	387
14.7	Best Approximation by Trigonometric Polynomials	390
14.8	Connections with Polynomial Approximation	393
14.9	Jackson’s Theorem and Bernstein’s Theorem	397
15	Wavelets	406
15.1	Introduction	406
15.2	The Haar Wavelet	408
15.3	Multiresolution Analysis	412
15.4	Recovering the Wavelet	416
15.5	Daubechies Wavelets	420
15.6	Existence of the Daubechies Wavelet	426
15.7	Approximations Using Wavelets	429
15.8	The Franklin Wavelet	433
15.9	Riesz Multiresolution Analysis	440
16	Convexity and Optimization	449
16.1	Convex Sets	449
16.2	Relative Interior	455
16.3	Separation Theorems	460
16.4	Extreme Points	464
16.5	Convex Functions in One Dimension	467
16.6	Convex Functions in Higher Dimensions	473
16.7	Subdifferentials and Directional Derivatives	477
16.8	Tangent and Normal Cones	487
16.9	Constrained Minimization	491
16.10	The Minimax Theorem	498
	References	505
	Index	507
