

# CONTENTS

1	An Introduction to Relativistic Quantum Chemistry .....	1
	<i>W.H. Eugen Schwarz</i>	
1.1	Motivation .....	2
1.1.1	Quantization .....	3
1.1.2	Relativity .....	4
1.1.3	Relativistic Quantum Field Theory for Electrons .....	5
1.1.4	Quantum Chemistry .....	6
1.1.5	Relativistic Quantum Chemistry .....	7
1.1.6	Units and Numbers .....	12
1.2	From Three Basic Concepts to the Dirac Equation .....	12
1.2.1	Principle of Invariance: The Lorentz Transformation ...	12
1.2.2	Relativity and the Natural Laws for Mechanics and Electrodynamics .....	14
1.2.3	Relativistic and Non-relativistic Wave Equations .....	17
1.2.4	The Natural Occurrence of Spin .....	18
1.2.5	Picture Changes .....	22
1.2.6	Summary .....	25
1.3	Dirac Solutions for Hydrogen and Other Atoms .....	26
1.3.1	Relativistic Orbital Energies of the Simplified H-Atom Model .....	27
1.3.2	Relativistic Atomic Spinors .....	28
1.3.3	Relativistic Changes of Orbital Radii .....	31
1.3.4	Paradoxical Relations .....	31
1.3.5	Orbitals in Many-Electron Atoms: Small Angular Momenta .....	34
1.3.6	Orbitals in Many-Electron Atoms: Higher Angular Momenta .....	40
1.3.7	Orbitals in Many-Electron Atoms: The $p^{3/2}$ Valence Orbital .....	42
1.3.8	The Relativistic Two-Electron Interaction .....	43
1.3.9	Smaller Effects: Nuclear Size, QED and Weak Interaction .....	45
1.4	Relativistic Changes of Molecules .....	47
1.4.1	Always Two Different Relativistic Contributions .....	49
1.4.2	Multiple Perturbation Theory .....	51

1.4.3	Atomic Spinors and Molecular Quaternions.....	53
1.4.4	The Periodic System of Elements and Its Natural End..	55
	Acknowledgments .....	58
	References.....	58
2	Relativistic Effects and the Chemistry of the Heavier Main Group Elements .....	63
	<i>John S. Thayer</i>	
2.1	Background .....	63
2.1.1	Introduction to Relativistic Effects .....	63
2.1.2	Intraatomic Changes .....	65
2.1.3	Chemical Effects .....	66
2.2	Sixth Period Elements .....	66
2.2.1	s-Block Elements .....	66
2.2.2	d-Block Elements .....	67
2.2.3	p-Block Elements .....	72
2.3	Seventh and Eighth Period Elements .....	80
2.3.1	General .....	80
2.3.2	s-Block Elements .....	81
2.3.3	Superheavy Elements .....	81
2.4	Conclusions .....	84
	Acknowledgments .....	85
	References .....	85
3	Why do we Need Relativistic Computational Methods?.....	99
	<i>Jacek Styszyński</i>	
3.1	Introduction .....	99
3.2	Energetic Structure and Spectroscopic Constants.....	101
3.2.1	Diatomic Molecules.....	101
3.2.2	Polyatomic Molecules .....	147
3.3	Electric Properties of Molecules .....	151
3.3.1	Electric Properties of Interhalogens .....	152
3.3.2	Electric Field Gradient and Quadrupole Moments .....	154
3.4	Conclusions .....	158
	Appendix .....	159
	References.....	162
4	Two-Component Relativistic Theories.....	165
	<i>Maria Barysz</i>	
4.1	Introduction .....	165
4.2	The Two-Component Methodology .....	169

4.2.1	Elimination of the Small Component and the Pauli Expansion .....	169
4.2.2	Regular Approximations (RA) .....	171
4.2.3	Unitary Transformations of the Dirac Hamiltonian .....	172
4.2.4	Infinite Order Two-Component (IOTC) Method .....	176
4.3	Interactions.....	186
4.4	Summary and Conclusion .....	188
	Acknowledgments .....	189
	References .....	189
5	Relativistic Density Functional Theory .....	191
	<i>Christoph van Wüllen</i>	
5.1	Nonrelativistic Density Functional Theory Basics .....	191
5.2	Relativistic Extension of DFT .....	194
5.3	Relativistic Spin Density Functional Theory: Collinear and Noncollinear Approximation .....	198
5.4	Relativistic Exchange-Correlation Functionals .....	201
5.5	Dirac–Kohn–Sham Implementations .....	204
5.6	Quasirelativistic Methods .....	205
5.7	The Presence, and the Future .....	209
	References .....	210
6	Relativistic Pseudopotentials .....	215
	<i>Xiaoyan Cao and Michael Dolg</i>	
6.1	Introduction .....	215
6.2	Theoretical Considerations .....	217
6.2.1	Phillips–Kleinman Equation.....	217
6.2.2	Valence Electron Model Hamiltonian for an Atom.....	220
6.2.3	Analytical Form of Non-relativistic Pseudopotentials ..	221
6.2.4	Analytical Form of Scalar-Relativistic Pseudopotentials .....	223
6.2.5	Analytical Form of Relativistic Pseudopotentials .....	223
6.2.6	Molecular Pseudopotentials .....	225
6.2.7	Core-Polarization Potentials .....	225
6.2.8	Core–Core/Nucleus Repulsion Corrections.....	227
6.3	Energy-Consistent Pseudopotentials.....	227
6.3.1	Some Historical Aspects .....	228
6.3.2	Method of Parametrization .....	230
6.3.3	Availability of Pseudopotentials and Valence Basis Sets.....	233
6.4	Other Effective Core Potential Methods.....	237
6.4.1	Shape-Consistent Pseudopotentials .....	237
6.4.2	Model Potential Method .....	239

6.4.3	DFT-Based Effective Core Potentials .....	242
6.5	Example: Uranium .....	244
6.5.1	Choice of the Reference Data .....	245
6.5.2	Choice of the Core .....	247
6.5.3	Pseudopotential Adjustment .....	252
6.5.4	Valence Basis Set Optimization .....	261
6.5.5	Calibration and Application .....	262
6.6	Conclusions .....	269
	Acknowledgements .....	270
	References .....	270
7	Four-Component Electronic Structure Methods .....	279
	<i>Ephraim Eliav and Uzi Kaldor</i>	
7.1	Introduction .....	279
7.2	Four-Component Methodology .....	280
7.2.1	Dirac Equation – Historical Overview .....	280
7.2.2	QED Hamiltonian .....	284
7.2.3	Particle–Particle Interaction and the No-Virtual-Pair approximation .....	290
7.2.4	The NVPA Hamiltonian and Benchmarking of Four-Component Methods .....	296
7.2.5	Standard Four-Component SCF Procedure for Atoms and Molecules .....	299
7.3	The NVPA Multi-Root Multi-Reference Fock-Space Coupled Cluster Method .....	302
7.3.1	Basic FSCC Method .....	302
7.3.2	The Intermediate Hamiltonian CC Method .....	305
7.4	Applications: Heavy Elements .....	311
7.4.1	When Is an Atom “Heavy”? Ionization Potentials of Alkali Atoms .....	312
7.4.2	Gold Atom: Local Maximum of Relativistic Effects .....	313
7.4.3	The $f^2$ Levels of $\text{Pr}^{3+}$ : Importance of Dynamic Correlation .....	314
7.4.4	Electron Affinities of Alkali Atoms – Accuracy at the 1 meV Level .....	315
7.4.5	Electron Affinities in Group 13 .....	317
7.4.6	Properties Other Than Energy: Nuclear Quadrupole Moments .....	318
7.5	Applications: Superheavy Elements .....	320
7.5.1	Ground State Configuration of Roentgenium (E111) .....	320
7.5.2	Ground State of Rutherfordium – Relativity vs. Correlation .....	322

7.5.3	Eka-Lead (Element 114) – How Inert Is It? .....	323
7.5.4	Electronic Spectrum of Nobelium ( $Z = 102$ ) and Lawrencium ( $Z = 103$ ) .....	327
7.5.5	Can a Rare Gas Atom Bind an Electron? .....	330
7.5.6	Adsorption of Superheavy Atoms on Surfaces – Identifying and Characterizing New Elements .....	331
7.6	Directions for Future Development .....	333
7.6.1	Beyond Standard Four-Component Hartree–Fock Method: the QED–SCF Procedure .....	333
7.6.2	Beyond NVPA: QED Many-Body Description and the Covariant Evolution Operator Approach .....	335
7.6.3	Generalized Fock Space. Double Fock-Space CC .....	338
7.7	Summary and Conclusion .....	341
	Acknowledgments .....	342
	References .....	342
8	The Effects of Relativity in Materials Science: Core Electron Spectra .....	351
	<i>R. Broer</i>	
8.1	Introduction .....	351
8.2	Computational Methods .....	354
8.3	X-Ray Photoelectron Spectra .....	358
8.4	X-Ray Absorption and Electron Energy Loss Spectra .....	363
8.5	Summary .....	369
	Acknowledgments .....	370
	References .....	370
9	Relativistic Symmetries in the Electronic Structure and Properties of Molecules .....	373
	<i>Devashis Majumdar, Szczepan Roszak, and Jerzy Leszczynski</i>	
9.1	Introduction .....	375
9.2	Spin-Orbit Interaction and Double Group .....	375
9.3	Double Groups and Relativistic Treatment of Molecules .....	377
9.3.1	Diatomic Systems .....	377
9.3.2	Polyatomic Systems .....	380
9.4	Applications of Double Group Symmetry in Calculating Molecular Properties .....	383
9.4.1	Diatomics .....	383
9.4.2	Polyatomic Systems .....	389
9.5	Time Reversal .....	395

9.5.1	Parity .....	395
9.5.2	Charge Conjugation .....	397
9.5.3	CPT Theorem and Concept of Time Reversal .....	397
9.5.4	Properties of T and Its Implication in Molecular Properties .....	398
9.5.5	Time Reversal in Group Theory .....	399
9.6	Concluding Remarks .....	400
	Acknowledgements .....	401
	Appendix .....	401
	References .....	403
10	Relativistic String-Based Electron Correlation Methods .....	407
	<i>Timo Fleig</i>	
10.1	Introduction .....	407
10.2	General Principles .....	409
10.2.1	Time-Reversal Symmetry .....	409
10.2.2	Kramers-Paired Spinors .....	410
10.2.3	Integrals Over Kramers-Paired Spinors .....	412
10.2.4	Double Group Symmetry .....	413
10.2.5	Generalized Active Spaces .....	414
10.3	Many-Particle Wavefunctions .....	416
10.3.1	Spinor Strings .....	416
10.3.2	Relativistic Excitation Classes .....	418
10.4	Wavefunction-Based Electron Correlation Methods .....	419
10.4.1	Hamiltonian Operators .....	419
10.4.2	Configuration Interaction .....	423
10.4.3	Multi-Configuration SCF .....	429
10.4.4	Coupled Cluster .....	433
10.5	Sample Applications .....	438
10.5.1	Tl <sub>2</sub> Ground and Excited States .....	438
10.5.2	Br <sub>2</sub> <sup>2+</sup> .....	440
10.5.3	I <sub>3</sub> and I <sub>3</sub> <sup>-</sup> .....	441
10.6	Concluding Remarks .....	443
	Acknowledgements .....	444
	References .....	445
11	Electronic Structure and Chemistry of the Heaviest Elements .....	451
	<i>V. Pershina</i>	
11.1	Introduction .....	451
11.2	Production and Identification of the Heaviest Elements .....	452
11.3	Experimental Chemical Studies .....	455
11.3.1	Gas-Phase Chemistry .....	456
11.3.2	Liquid-Phase Chemistry .....	457

11.4	Theoretical Studies .....	458
11.4.1	Role of Theoretical Studies.....	458
11.4.2	Relativistic and QED Effects on Atomic Electronic Shells of the Heaviest Elements .....	458
11.5	Relativistic Quantum Chemical Methods .....	461
11.5.1	Atomic Codes .....	462
11.5.2	Molecular Methods .....	463
11.6	Atomic Properties of the Heaviest Elements and Relativistic Effects .....	467
11.6.1	Electronic Configurations.....	467
11.6.2	Ionization Potentials, Electron Affinities and Stable Oxidation States .....	468
11.6.3	Atomic/Ionic/Covalent Radii and Polarizability .....	471
11.7	GAS-Phase Chemistry .....	473
11.7.1	Rf Through Hs .....	473
11.7.2	Rg .....	480
11.7.3	Element 112 .....	482
11.7.4	Element 113 .....	493
11.7.5	Element 114 .....	496
11.7.6	Elements 115–118 .....	503
11.7.7	Elements with $Z > 118$ .....	506
11.7.8	Summary of Predictions of Volatility of the Heaviest Elements and Their Compounds .....	507
11.8	Aqueous Chemistry.....	507
11.8.1	Redox Potentials and Reduction Experiments .....	507
11.8.2	Complex Formation and Extraction by Liquid Chromatography .....	508
11.8.3	Summary of Predictions of the Complex Formation .....	511
11.9	Summary and Outlook .....	512
