

Contents

1 Basic Concepts in Signals	1
1.1 Introduction to the Book and Signals	1
1.1.1 Different Ways of Looking at a Signal	1
1.1.2 Continuous-Time and Discrete-Time Signals	3
1.1.3 Analog Versus Digital Signal Processing	5
1.1.4 Examples of Simple Functions	6
1.2 Useful Signal Operations	8
1.2.1 Time Shifting	8
1.2.2 Time Scaling	8
1.2.3 Time Reversal	8
1.2.4 Amplitude Shift	8
1.2.5 Simple Symmetries: Even and Odd Functions	9
1.2.6 Products of Even and Odd Functions	9
1.2.7 Signum (or sgn) Function	10
1.2.8 Sinc and Sinc ² Functions	10
1.2.9 Sine Integral Function	10
1.3 Derivatives and Integrals of Functions	11
1.3.1 Integrals of Functions with Symmetries	12
1.3.2 Useful Functions from Unit Step Function	12
1.3.3 Leibniz's Rule	13
1.3.4 Interchange of a Derivative and an Integral	13
1.3.5 Interchange of Integrals	13
1.4 Singularity Functions	14
1.4.1 Unit Impulse as the Limit of a Sequence	15
1.4.2 Step Function and the Impulse Function	16
1.4.3 Functions of Generalized Functions	17
1.4.4 Functions of Impulse Functions	18
1.4.5 Functions of Step Functions	19
1.5 Signal Classification Based on Integrals	19
1.5.1 Effects of Operations on Signals	21
1.5.2 Periodic Functions	21
1.5.3 Sum of Two Periodic Functions	23
1.6 Complex Numbers, Periodic, and Symmetric Periodic Functions	24
1.6.1 Complex Numbers	25

1.6.2	Complex Periodic Functions	27
1.6.3	Functions of Periodic Functions	27
1.6.4	Periodic Functions with Additional Symmetries.	28
1.7	Examples of Probability Density Functions and their Moments.	29
1.8	Generation of Periodic Functions from Aperiodic Functions	31
1.9	Decibel	32
1.10	Summary.	34
	Problems	35
2	Convolution and Correlation	39
2.1	Introduction	39
2.1.1	Scalar Product and Norm	40
2.2	Convolution	41
2.2.1	Properties of the Convolution Integral	41
2.2.2	Existence of the Convolution Integral.	44
2.3	Interesting Examples	44
2.4	Convolution and Moments	50
2.4.1	Repeated Convolution and the Central Limit Theorem.	52
2.4.2	Deconvolution	53
2.5	Convolution Involving Periodic and Aperiodic Functions	54
2.5.1	Convolution of a Periodic Function with an Aperiodic Function	54
2.5.2	Convolution of Two Periodic Functions.	55
2.6	Correlation	56
2.6.1	Basic Properties of Cross-Correlation Functions	57
2.6.2	Cross-Correlation and Convolution	57
2.6.3	Bounds on the Cross-Correlation Functions	58
2.6.4	Quantitative Measures of Cross-Correlation	59
2.7	Autocorrelation Functions of Energy Signals	63
2.8	Cross- and Autocorrelation of Periodic Functions	65
2.9	Summary	68
	Problems	68
3	Fourier Series	71
3.1	Introduction	71
3.2	Orthogonal Basis Functions.	72
3.2.1	Gram–Schmidt Orthogonalization	74
3.3	Approximation Measures.	75
3.3.1	Computation of $c[k]$ Based on Partial	77
3.3.2	Computation of $c[k]$ Using the Method of Perfect Squares	77
3.3.3	Parseval’s Theorem	78
3.4	Fourier Series	80
3.4.1	Complex Fourier Series	80
3.4.2	Trigonometric Fourier Series	83
3.4.3	Complex F-series and the Trigonometric F-series Coefficients-Relations	83

3.4.4	Harmonic Form of Trigonometric Fourier Series.	83
3.4.5	Parseval's Theorem Revisited	84
3.4.6	Advantages and Disadvantages of the Three Forms of Fourier Series.	85
3.5	Fourier Series of Functions with Simple Symmetries.	85
3.5.1	Simplification of the Fourier Series Coefficient Integral	86
3.6	Operational Properties of Fourier Series	87
3.6.1	Principle of Superposition	87
3.6.2	Time Shift	87
3.6.3	Time and Frequency Scaling	88
3.6.4	Fourier Series Using Derivatives.	89
3.6.5	Bounds and Rates of Fourier Series Convergence by the Derivative Method	91
3.6.6	Integral of a Function and Its Fourier Series	93
3.6.7	Modulation in Time.	93
3.6.8	Multiplication in Time.	94
3.6.9	Frequency Modulation	95
3.6.10	Central Ordinate Theorems.	95
3.6.11	Plancherel's Relation (or Theorem).	95
3.6.12	Power Spectral Analysis	95
3.7	Convergence of the Fourier Series and the Gibbs Phenomenon.	96
3.7.1	Fourier's Theorem.	96
3.7.2	Gibbs Phenomenon	97
3.7.3	Spectral Window Smoothing.	99
3.8	Fourier Series Expansion of Periodic Functions with Special Symmetries.	100
3.8.1	Half-Wave Symmetry	100
3.8.2	Quarter-Wave Symmetry.	102
3.8.3	Even Quarter-Wave Symmetry	102
3.8.4	Odd Quarter-Wave Symmetry.	102
3.8.5	Hidden Symmetry	103
3.9	Half-Range Series Expansions	103
3.10	Fourier Series Tables	104
3.11	Summary.	104
	Problems	106
4	Fourier Transform Analysis	109
4.1	Introduction	109
4.2	Fourier Series to Fourier Integral	109
4.2.1	Amplitude and Phase Spectra	112
4.2.2	Bandwidth-Simplistic Ideas.	114
4.3	Fourier Transform Theorems, Part 1.	114
4.3.1	Rayleigh's Energy Theorem	114
4.3.2	Superposition Theorem	115
4.3.3	Time Delay Theorem.	116
4.3.4	Scale Change Theorem	116
4.3.5	Symmetry or Duality Theorem	118
4.3.6	Fourier Central Ordinate Theorems	119

4.4	Fourier Transform Theorems, Part 2	119
4.4.1	Frequency Translation Theorem	120
4.4.2	Modulation Theorem	120
4.4.3	Fourier Transforms of Periodic and Some Special Functions	121
4.4.4	Time Differentiation Theorem	124
4.4.5	Times- t Property: Frequency Differentiation Theorem	126
4.4.6	Initial Value Theorem	128
4.4.7	Integration Theorem	128
4.5	Convolution and Correlation	129
4.5.1	Convolution in Time	129
4.5.2	Proof of the Integration Theorem	132
4.5.3	Multiplication Theorem (Convolution in Frequency)	133
4.5.4	Energy Spectral Density	135
4.6	Autocorrelation and Cross-Correlation	136
4.6.1	Power Spectral Density	138
4.7	Bandwidth of a Signal	139
4.7.1	Measures Based on Areas of the Time and Frequency Functions	139
4.7.2	Measures Based on Moments	140
4.7.3	Uncertainty Principle in Fourier Analysis	141
4.8	Moments and the Fourier Transform	143
4.9	Bounds on the Fourier Transform	144
4.10	Poisson's Summation Formula	145
4.11	Interesting Examples and a Short Fourier Transform Table . .	145
4.11.1	Raised-Cosine Pulse Function	146
4.12	Tables of Fourier Transforms Properties and Pairs	147
4.13	Summary	147
	Problems	147
5	Relatives of Fourier Transforms	155
5.1	Introduction	155
5.2	Fourier Cosine and Sine Transforms	156
5.3	Hartley Transform	159
5.4	Laplace Transforms	161
5.4.1	Region of Convergence (ROC)	163
5.4.2	Inverse Transform of Two-Sided Laplace Transform . . .	164
5.4.3	Region of Convergence (ROC) of Rational Functions – Properties	165
5.5	Basic Two-Sided Laplace Transform Theorems	165
5.5.1	Linearity	165
5.5.2	Time Shift	165
5.5.3	Shift in s	165
5.5.4	Time Scaling	165
5.5.5	Time Reversal	166
5.5.6	Differentiation in Time	166
5.5.7	Integration	166
5.5.8	Convolution	166

5.6	One-Sided Laplace Transform	166
5.6.1	Properties of the One-Sided Laplace Transform	167
5.6.2	Comments on the Properties (or Theorems) of Laplace Transforms	167
5.7	Rational Transform Functions and Inverse Laplace Transforms	174
5.7.1	Rational Functions, Poles, and Zeros	175
5.7.2	Return to the Initial and Final Value Theorems and Their Use	176
5.8	Solutions of Constant Coefficient Differential Equations Using Laplace Transforms	178
5.8.1	Inverse Laplace Transforms	179
5.8.2	Partial Fraction Expansions	179
5.9	Relationship Between Laplace Transforms and Other Transforms	183
5.9.1	Laplace Transforms and Fourier Transforms	184
5.9.2	Hartley Transforms and Laplace Transforms	185
5.10	Hilbert Transform	186
5.10.1	Basic Definitions	186
5.10.2	Hilbert Transform of Signals with Non-overlapping Spectra	188
5.10.3	Analytic Signals	189
5.11	Summary	190
	Problems	190
6	Systems and Circuits	193
6.1	Introduction	193
6.2	Linear Systems, an Introduction	193
6.3	Ideal Two-Terminal Circuit Components and Kirchhoff's Laws	194
6.3.1	Two-Terminal Component Equations	195
6.3.2	Kirchhoff's Laws	197
6.4	Time-Invariant and Time-Varying Systems	198
6.5	Impulse Response	199
6.5.1	Eigenfunctions	202
6.5.2	Bounded-Input/Bounded-Output (BIBO) Stability	202
6.5.3	Routh–Hurwitz Criterion (R–H criterion)	203
6.5.4	Eigenfunctions in the Fourier Domain	206
6.6	Step Response	208
6.7	Distortionless Transmission	213
6.7.1	Group Delay and Phase Delay	213
6.8	System Bandwidth Measures	216
6.8.1	Bandwidth Measures Using the Impulse Response $h(t)$ and Its Transform $H(j\omega)$	216
6.8.2	Half-Power or 3 dB Bandwidth	217
6.8.3	Equivalent Bandwidth or Noise Bandwidth	217
6.8.4	Root Mean-Squared (RMS) Bandwidth	218
6.9	Nonlinear Systems	219
6.9.1	Distortion Measures	220

6.9.2	Output Fourier-Transform of a Nonlinear System . . .	220
6.9.3	Linearization of Nonlinear System Functions	221
6.10	Ideal Filters.	221
6.10.1	Low-Pass, High-Pass, Band-Pass, and Band-Elimination Filters	222
6.11	Real and Imaginary Parts of the Fourier Transform of a Causal Function	227
6.11.1	Relationship Between Real and Imaginary Parts of the Fourier Transform of a Causal Function Using Hilbert Transform	228
6.11.2	Amplitude Spectrum $ H(j\omega) $ to a Minimum Phase Function $H(s)$	229
6.12	More on Filters: Source and Load Impedances	229
6.12.1	Simple Low-Pass Filters	231
6.12.2	Simple High-Pass Filters	231
6.12.3	Simple Band-Pass Filters	233
6.12.4	Simple Band-Elimination or Band-Reject or Notch Filters	235
6.12.5	Maximum Power Transfer.	238
6.12.6	A Simple Delay Line Circuit	239
6.13	Summary.	239
	Problems	239
7	Approximations and Filter Circuits	243
7.1	Introduction	243
7.2	Bode Plots.	246
7.2.1	Gain and Phase Margins	252
7.3	Classical Analog Filter Functions	254
7.3.1	Amplitude-Based Design.	254
7.3.2	Butterworth Approximations	255
7.3.3	Chebyshev (Tschhebyscheff) Approximations	257
7.4	Phase-Based Design	262
7.4.1	Maximally Flat Delay Approximation	263
7.4.2	Group Delay of Bessel Functions	264
7.5	Frequency Transformations.	266
7.5.1	Normalized Low-Pass to High-Pass Transformation . . .	266
7.5.2	Normalized Low-Pass to Band-Pass Transformation. . .	268
7.5.3	Normalized Low-Pass to Band-Elimination Transformation	268
7.5.4	Conversions of Specifications from Low-Pass, High-Pass, Band-Pass, and Band Elimination Filters to Normalized Low-Pass Filters	270
7.6	Multi-terminal Components.	273
7.6.1	Two-Port Parameters	273
7.6.2	Circuit Analysis Involving Multi-terminal Components and Networks	277
7.6.3	Controlled Sources	278
7.7	Active Filter Circuits	279
7.7.1	Operational Amplifiers, an Introduction	279

7.7.2	Inverting Operational Amplifier Circuits	280
7.7.3	Non-inverting Operational Amplifier Circuits	282
7.7.4	Simple Second-Order Low-Pass and All-Pass Circuits. . .	284
7.8	Gain Constant Adjustment	285
7.9	Scaling	287
7.9.1	Amplitude (or Magnitude) Scaling, RLC Circuits . . .	287
7.9.2	Frequency Scaling, RLC Circuits	288
7.9.3	Amplitude and Frequency Scaling in Active Filters . .	288
7.9.4	Delay Scaling	290
7.10	RC–CR Transformations: Low-Pass to High-Pass Circuits . .	292
7.11	Band-Pass, Band-Elimination and Biquad Filters	294
7.12	Sensitivities	298
7.13	Summary.	301
	Problems	301
8	Discrete-Time Signals and Their Fourier Transforms	311
8.1	Introduction	311
8.2	Sampling of a Signal.	312
8.2.1	Ideal Sampling.	312
8.2.2	Uniform Low-Pass Sampling or the Nyquist Low-Pass Sampling Theorem	314
8.2.3	Interpolation Formula and the Generalized Fourier Series	317
8.2.4	Problems Associated with Sampling Below the Nyquist Rate	319
8.2.5	Flat Top Sampling.	322
8.2.6	Uniform Band-Pass Sampling Theorem	324
8.2.7	Equivalent continuous-time and discrete-time systems.	325
8.3	Basic Discrete-Time (DT) Signals	325
8.3.1	Operations on a Discrete Signal	327
8.3.2	Discrete-Time Convolution and Correlation	329
8.3.3	Finite duration, right-sided, left-sided, two-sided, and causal sequences	330
8.3.4	Discrete-Time Energy and Power Signals	330
8.4	Discrete-Time Fourier Series	332
8.4.1	Periodic Convolution of Two Sequences with the Same Period.	334
8.4.2	Parseval's Identity	334
8.5	Discrete-Time Fourier Transforms	335
8.5.1	Discrete-Time Fourier Transforms (DTFTs)	335
8.5.2	Discrete-Time Fourier Transforms of Real Signals with Symmetries	336
8.6	Properties of the Discrete-Time Fourier Transforms.	339
8.6.1	Periodic Nature of the Discrete-Time Fourier Transform	339
8.6.2	Superposition or Linearity	340
8.6.3	Time Shift or Delay	341
8.6.4	Modulation or Frequency Shifting	341

8.6.5	Time Scaling	341
8.6.6	Differentiation in Frequency	342
8.6.7	Differencing	342
8.6.8	Summation or Accumulation	344
8.6.9	Convolution	344
8.6.10	Multiplication in Time	345
8.6.11	Parseval's Identities	346
8.6.12	Central Ordinate Theorems	346
