Part I BIOMOLECULES

1	The Hierarchy of Living Things	5
2	Information and Function	9
2.1	Information and Construction	9
2.2	Information Content	10
3	Biomolecules, Spin Glasses, Glasses, and Solids (R. H. Austin)	13
	References	17
4	Proteins	19
4.1	Amino Acids, the Building Blocks	19
4.2	Amino Acid Composition and Sequence	24
4.3	The Primary Sequence	25
4.4	Molecular Weight	27
4.5	Some Typical Proteins	28
4.5.1	Heme Proteins	28
4.5.2	Myoglobin (Mb)	30
4.5.3	Hemoglobin (Hb)	32
4.5.4	Structural Proteins	33
	References	35
5	Nucleic Acids	37
5.1	General Arrangement of Nucleic Acids	37
5.2	Mononucleotides—The Building Blocks	39
5.3	Polynucleotides	40
5.4	The Double Helix	41
5.5	Some Properties of DNA	42

5.6	Replication	44
5.7	Storage and Retrieval of Information	45
References		47
6	The Genetic Code	49
6.1	Transcription and Translation	49
6.2	The Code	49
6.3	Codon and Anticodon	51
7	Lipids and Membranes	53
7.1	Lipids	53
7.2	Membranes	55
7.3	Biomembranes and Inclusions	56
References		59
Part II SPATIAL STRUCTURE OF PROTEINS: MEASURE-		
MENT AND CONSEQUENCE		
8	The Secondary Structure	65
8.1	The Amino Acids	65
8.2	The Ramachandran Plot	66
8.3	The α -Helix	66
8.4	β Pleated Sheets	69
8.5	Secondary Structure Prediction	71
References		73
9	Tertiary Structure of Proteins	75
9.1	Packing of α -Helices and β Pleated Sheets	75
9.2	Structural Patterns	78
References		81
10	Myoglobin and Hemoglobin	83
10.1	Ligand Binding to Myoglobin	83
10.2	Ligand Binding to Hemoglobin: The Case for Conformational Complexity	86
10.3	The Bohr Effect: Further Evidence for Conformational Changes	89
References		91

Part III THE ENERGY LANDSCAPE AND DYNAMICS OF PROTEINS

11 Conformational Substates	97
11.1 States and Substates	97
11.2 Nonexponential Kinetics	100
11.3 The Debye-Waller Factor	103
11.4 Spectral Hole Burning	107
11.5 Substates Seen in Molecular Dynamics Simulations	109
References	111
12 The Organization of the Energy Landscape	113
12.1 The Energy Landscape in One Dimension	113
12.2 The Hierarchy of Substates	113
12.3 Taxonomic Substates (Tier 0)	114
12.4 Statistical Substates (Tier 1)	121
12.5 Few-Level Substates (Tier 2-?)	121
References	123
13 Reaction Theory	125
13.1 Arrhenius Transitions and Tunneling	125
13.2 Transition State Theory (TST)	128
13.3 The Kramers Equation	131
13.4 The Tunnel Effect	137
13.5 Barriers and Gates	144
13.6 Electronically Controlled Reactions	146
13.7 Collective Effects	152
References	153
14 Supercooled Liquids and Glasses	157
14.1 Glass Structure	157
14.2 Energy Landscape	158
14.3 Specific Heat (Heat Capacity)	159
14.4 Viscosity, Glass Transition, and Fragility	159
14.5 Fluctuation and Relaxation Processes	160
14.5.1 Fluctuation	160
14.5.2 Primary (α) and Secondary (β) Relaxations	162
14.6 Low-Temperature Phenomena in Glasses	164
14.7 Theory	166
References	167

Part IV FUNCTION AND DYNAMICS

15 Protein Dynamics	175
15.1 Equilibrium and Nonequilibrium Motions	176
15.2 Vibrations and Normal Modes	178
15.3 Protein Quakes	178
15.4 Another Look at Protein Landscapes: Conformation, Structure, and Reaction	180
15.5 The α Fluctuations and Slaving	183
15.6 Internal Motions, Hydration, and β Fluctuations	185
15.7 Low-Temperature Dynamics, or Lost in the Energy Landscape	189
References	193
16 Protein Quantum Dynamics? (R. H. Austin)	199
16.1 Self-Trapped States, Classical and Quantum Mechanical	200
16.2 What Are the Experiments?	203
References	207
17 Creative Homework: Dynamics and Function	209
17.1 Myoglobin as Prototype of Complexity	210
17.1.1 Kinetics and the Reaction Landscape	210
17.1.2 Pathways	211
17.1.3 Dynamics	211
17.1.4 Hydration	212
17.2 Neuroglobin—A Heme Protein in the Brain (G. U. Nienhaus)	212
17.2.1 The Reaction Energy Landscape of Ligand Binding	212
17.2.2 Molecular Structure of Ngb	213
17.2.3 Kinetic Experiments and Ligand Binding	213
17.2.4 Conformational Energy Landscape	214
17.2.5 What Is Ngb Good for in the Body?	215
17.3 Protein Folding and Unfolding—An Introduction (R. D. Young)	216
17.3.1 Two-State Model of Protein Folding and Unfolding	217
17.3.2 Thermodynamic Equilibrium Studies of Folded and Unfolded Proteins	220
17.3.3 Kinetic Studies of Protein Folding and Unfolding	224
17.3.4 Zwanzig Model of Protein Folding and Unfolding	226
17.3.5 Role of Solvent Dynamics in Protein Folding and Unfolding – A Research Perspective	228
17.3.6 Chemical and Protein Engineering Studies of Protein Folding and Unfolding	230
17.4 Farewell	230
References	231

Part V APPENDICES: TOOLS AND CONCEPTS FOR THE PHYSICS OF PROTEINS

18 Chemical Forces	243
18.1 Survey	243
18.2 Atomic Radii	245
18.3 Electric Dipole Moment and Polarizability	246
18.4 The Covalent Bond	248
18.5 Electrostatic Forces	248
18.6 Hydrogen bond	249
18.7 Van der Waals (Dispersion) Force	252
18.8 Electron Shell Repulsion and Van der Waals Potential	253
18.9 The Hydrophobic (Apolar) Interaction	253
References	255
19 Acids and Bases for Physicists	257
19.1 Acids and Bases	257
19.2 The pH Scale	258
19.3 The Henderson-Hasselbalch Equation	259
19.4 Amino Acids	259
References	261
20 Thermodynamics for Physicists	263
20.1 Variables	263
20.2 The Internal Energy	264
20.3 Thermodynamic Potentials	265
20.4 Equilibrium Conditions	266
20.5 Thermodynamic Quantities and Molecular Structure	267
20.6 Fluctuation	268
20.7 Fluctuation-Dissipation Theorems	273
20.8 Imperfections and Substates	275
References	277
21 Quantum Chemistry for Physicists	279
21.1 Atomic Orbitals	279
21.2 Bonds—General Aspects	281
21.3 Molecular Orbitals	284
21.4 Hybridization	289
21.5 Multiple Bonds	292
21.6 Delocalization and “Resonance”	294
21.7 The Peptide Bond	296
21.8 The Heme Group	299

References	307
22 Energy Levels from Nuclei to Proteins	309
References	313
23 Interaction of Radiation with Molecules	315
23.1 Absorption and Emission	315
23.2 Line Width	317
23.3 Transition Rates	318
23.3.1 Selection and Sum Rules	318
References	321
24 Water (R. H. Austin)	323
24.1 Clues to the Complexity of Water	324
24.2 Basic Structure of the Water Molecule	325
24.3 Condensed Water: Intermolecular Forces	326
24.3.1 Dispersion Forces	327
24.3.2 Dipole-Dipole Coupling	329
24.3.3 Ferroelectric Ice?	330
24.4 The Ice Problem and Entropy	332
24.4.1 The Hydrophobic Effect: Entropy at Work	334
24.4.2 Hydrogen Bonds	335
References	339
25 Scattering of Photons: X-Ray Diffraction	341
25.1 The Principles of Structure Determination	342
25.2 Interaction of X-Rays with Atoms	343
25.3 Intensity and Geometry	344
25.4 Scattering from Single Atoms and Molecules	346
25.5 Bragg's Law	348
25.6 The Laue Diffraction Equations	349
25.7 Crystal Diffraction	350
25.8 The Phase Problem	352
25.9 Data Collection	354
25.10 X-Ray Sources	356
25.11 Limitations of X-Ray Structures	359
References	361
26 Electronic Excitations	363
26.1 Electronic and Vibrational Transitions	363
26.2 Electronic Spectra—Experimental	364
26.3 Electronic Transitions	366

26.4 Chromophores and Their Spectra	367
26.5 Fluorescence	370
26.6 Experimental Observation of Fluorescence	372
References	375
27 Vibrations	377
27.1 Vibrational States	378
27.2 Fourier-Transform Infrared Spectroscopy	382
27.3 Raman Scattering—General	384
27.4 Raman Scattering—An Example	387
27.5 Resonance Raman Scattering	388
References	391
28 The Nucleus as a Probe (C. E. Schulz)	393
28.1 Hyperfine Interactions	393
28.2 The Mössbauer Effect	399
28.3 Isomer Shift	405
28.4 Zeeman Effects	407
28.5 Quadrupole Interaction	409
28.6 Electronic Parameters	412
References	415
29 Nuclear Magnetic Resonance and Molecular Structure Dynamics (R. H. Austin)	417
29.1 Coherent and Incoherent Processes in NMR	417
29.2 Two-Level States, Density Matrices, and Rabi Oscillations ...	420
29.3 Fourier Transform Free Induction Decay (FT-FID) and Spin Echoes	423
29.4 Spin-Spin Interactions and Protein Structure Determination ..	427
29.5 Probing the Protein Conformational Landscape with NMR ...	430
References	435
30 Neutron Diffraction	437
30.1 Neutron Scattering	437
30.2 Comparison: Neutrons <i>versus</i> X-Rays	438
30.3 Experimental	439
