Preface	v
1 The Role of Dynamics in Extracting Information Sparsely Encoded in High Dimensional Data Streams	1
Mario Sznaiier, Octavia Camps, Necmiye Ozay, Tao Ding, Gilead Tadmor, and Dana Brooks	
1.1 Introduction	1
1.2 Key Subproblems Arising in the Context of Dynamic Information Extraction	2
1.3 Nonlinear Embedding of Dynamic Data	5
1.4 Structure Extraction from High Dimensional Data Streams	7
1.5 Robust Dynamic Data Segmentation	10
1.5.1 Example 1: Video Segmentation	13
1.5.2 Example 2: Segmentation of Dynamic Textures	15
1.6 Constrained Interpolation of High Dimensional Signals	17
1.7 Hypothesis Testing and Data Sharing	20
1.8 Conclusions	25
References	25
2 Information Trajectory of Optimal Learning	29
Roman V. Belavkin	
2.1 Introduction	29
2.2 Topology and Geometry of Learning Systems	32
2.2.1 Problem Statement and Basic Concepts	32
2.2.2 Asymmetric Topologies and Gauge Functions	34
2.2.3 Trajectories Continuous in Information	35
2.3 Optimal Evolution and Bounds	37
2.4 Empirical Evaluation on Learning Agents	40
2.5 Conclusion	43
References	44

vii

3	Performance-Information Analysis and Distributed Feedback Stabilization in Large-Scale Interconnected Systems	45
	Khanh D. Pham	
3.1	Introduction	45
3.2	Problem Formulation	48
3.3	Performance-Information Analysis	52
3.4	Problem Statements	62
3.5	Distributed Risk-Averse Feedback Stabilization	74
3.6	Conclusions	80
	References	81
4	A General Approach for Modules Identification in Evolving Networks	83
	Thang N. Dinh, Incheol Shin, Nhi K. Thai, My T. Thai, and Taieb Znati	
4.1	Introduction	84
4.2	Preliminaries and Problem Definition	85
	4.2.1 Preliminaries	85
	4.2.2 Problem Definition	86
4.3	Compact Representation of a Network	86
	4.3.1 Structure Preservation	88
	4.3.2 Size of the Compact Representation	91
4.4	Partition Based on Evolution History	92
	4.4.1 Algorithm	93
	4.4.2 Complexity	95
4.5	Experimental Evaluation	96
4.6	Conclusions	99
	References	99
5	Topology Information Control in Feedback Based Reconfiguration Processes	101
	Alexandru Murgu, Ian Postlethwaite, Dawei Gu, and Chris Edwards	
5.1	Introduction and Motivation	101
5.2	Group Communication Networking	103
5.3	Reconfiguration Process Optimization	108
	5.3.1 Topology Information Model	108
	5.3.2 Information Control Problem	111
5.4	Topology Information Control	113
	5.4.1 Lagrangian Solution	113
	5.4.2 Distributed Implementation	116
	5.4.3 Summary of Computational Results	120
5.5	Concluding Remarks	122
	References	123
6	Effect of Network Geometry and Interference on Consensus in Wireless Networks	125
	Sundaram Vanka, Vijay Gupta, and Martin Haenggi	
6.1	Introduction	125

6.2	Problem Formulation	126
6.3	Analysis of a Ring and a 2D Torus	129
6.3.1	The 1-D Case: Nodes on a Ring	129
6.3.2	Nodes on a Two-Dimensional Torus	132
6.4	Hierarchical Networks	138
6.5	Conclusions	141
	References	142
7	Analyzing the Theoretical Performance of Information Sharing . . .	145
	Paul Scerri, Prasanna Velagapudi, and Katia Sycara	
7.1	Introduction	145
7.2	Information Sharing	147
7.2.1	Token Algorithms	148
7.3	Experimental Results	149
7.3.1	Optimality of the Lookahead Policy	150
7.3.2	Optimality of the Random Policies	151
7.3.3	Effects of Noisy Estimation	152
7.3.4	Properties Affecting Optimality	154
7.3.5	Scaling Network Size	156
7.4	Related Work	161
7.5	Conclusions and Future Work	162
	References	163
8	Self-Organized Criticality of Belief Propagation in Large Heterogeneous Teams	165
	Robin Ginton, Praveen Paruchuri, Paul Scerri, and Katia Sycara	
8.1	Introduction	165
8.2	Self-Organized Criticality	167
8.3	Belief Sharing Model	168
8.4	System Operation Regimes	169
8.5	Simulation Results	170
8.6	Related Work	181
8.7	Conclusions and Future Work	182
	References	182
9	Effect of Humans on Belief Propagation in Large Heterogeneous Teams	183
	Praveen Paruchuri, Robin Ginton, Katia Sycara, and Paul Scerri	
9.1	Introduction	183
9.2	Self-Organized Critical Systems	185
9.3	The Enabler-Impeder Effect	185
9.4	Model of Information Dissemination in a Network	186
9.5	Simulation Results	187
9.6	Related Work	194
9.7	Conclusions and Future Work	195
	References	195

10	Integration of Signals in Complex Biophysical Systems	197
	Alla Kammerdiner, Nikita Boyko, Nong Ye, Jiping He, and Panos Pardalos	
10.1	Introduction	198
10.2	Methods for Analysis of Phase Synchronization	199
10.2.1	Instantaneous Phase	199
10.2.2	Phase Synchronization	201
10.2.3	Generalized Phase Synchronization	201
10.3	Analysis of the Data Collected During Sensory-Motor Experiments	203
10.3.1	Sensory-Motor Experiments and Neural Data Acquisition	203
10.3.2	Computational Analysis of the LFP Data	204
10.4	Conclusion	209
	References	210
11	An Info-Centric Trajectory Planner for Unmanned Ground Vehicles	213
	Michael A. Hurni, Pooya Sekhavat, and I. Michael Ross	
11.1	Introduction	213
11.2	Problem Formulation and Background	215
11.3	Obstacle Motion Studies	217
11.3.1	The Sliding Door	217
11.3.2	The Cyclic Sliding Door	219
11.3.3	Obstacle Crossing (No Intercept)	224
11.3.4	Obstacle Intercept	225
11.3.5	Obstacle Intercept Window	226
11.4	Target Motion Studies	228
11.4.1	Target Rendezvous: Vehicle Faster than Target	228
11.4.2	Target Rendezvous: Vehicle Slower than Target	229
11.4.3	Target Rendezvous: Variable Target Motion	230
11.5	Conclusion	231
	References	231
12	Orbital Evasive Target Tracking and Sensor Management	233
	Huimin Chen, Genshe Chen, Dan Shen, Erik P. Blasch, and Khanh Pham	
12.1	Introduction	233
12.2	Fundamentals of Space Target Orbits	235
12.2.1	Time and Coordinate Systems	235
12.2.2	Orbital Equation and Orbital Parameter Estimation	235
12.3	Modeling Maneuvering Target Motion in Space Target Tracking	237
12.3.1	Sensor Measurement Model	237
12.3.2	Game Theoretic Formulation for Target Maneuvering Onset Time	238
12.3.3	Nonlinear Filter Design for Space Target Tracking	238
12.3.4	Posterior Cramer–Rao Lower Bound of the State Estimation Error	240
12.4	Sensor Management for Situation Awareness	241

12.4.1	Information Theoretic Measure for Sensor Assignment . .	241
12.4.2	Covariance Control for Sensor Scheduling	242
12.4.3	Game Theoretic Covariance Prediction for Sensor Management	243
12.5	Simulation Study	244
12.5.1	Scenario Description	244
12.5.2	Performance Comparison	245
12.6	Summary and Conclusions	247
	References	254
13	Decentralized Cooperative Control of Autonomous Surface Vehicles	257
	Pedro DeLima, Dimitri Zarzhitsky, and Daniel Pack	
13.1	Introduction	257
13.2	Motivation	258
13.3	Decentralized Hierarchical Supervisor	258
13.3.1	Persistent ISR Task	261
13.3.2	Transit	264
13.4	Simulation Results	270
13.5	Conclusion and Future Work	272
	References	273
14	A Connectivity Reduction Strategy for Multi-agent Systems	275
	Xiaojun Geng and David Jeffcoat	
14.1	Introduction	275
14.2	Background	276
14.2.1	Model	276
14.2.2	Edge Robustness	277
14.3	A Distributed Scheme of Graph Reduction	278
14.3.1	Redundant Edges and Triangle Closures	279
14.3.2	Local Triangle Topologies	280
14.3.3	Distributed Algorithm	281
14.4	Discussion and Simulation	284
14.5	Conclusion	286
	References	286
15	The Navigation Potential of Ground Feature Tracking	287
	Meir Pachter and Güner Mutlu	
15.1	Introduction	287
15.2	Modeling	289
15.3	Special Cases	292
15.4	Nondimensional Variables	295
15.5	Observability	297
15.6	Only the Elevation z_p of the Tracked Ground Object is Known . .	300
15.7	Partial Observability	302
15.8	Conclusion	302
	References	303

16	Minimal Switching Time of Agent Formations with Collision Avoidance	305
	Dalila B.M.M. Fontes and Fernando A.C.C. Fontes	
16.1	Introduction	305
16.2	Problem Definition	308
16.3	Dynamic Programming Formulation	310
16.3.1	Derivation of the Dynamic Programming Recursion	310
16.3.2	Collision Avoidance	311
16.4	Computational Implementation	313
16.5	Computational Experiments	317
16.6	Conclusion	319
	References	320
17	A Moving Horizon Estimator Performance Bound	323
	Nicholas R. Gans and Jess W. Curtis	
17.1	Introduction	323
17.2	Linear State Estimation	324
17.2.1	Kalman Filter as an IIR Filter	325
17.2.2	Moving Average Implementation	326
17.3	MHE Performance Bound	327
17.3.1	Situation When $\ A - KHA\ \geq 1$	329
17.3.2	Alternative Derivation	329
17.4	Simulation and Analysis	330
17.4.1	Simulation of Moving Horizon Estimator and Error Bound	330
17.4.2	Monte Carlo Analysis of Error Bound	332
17.5	Future Work	334
	References	334
18	A p-norm Discrimination Model for Two Linearly Inseparable Sets	335
	Pavlo Krokhmal, Robert Murphey, Panos M. Pardalos, and Zhaohan Yu	
18.1	Introduction	335
18.2	The p -norm Linear Separation Model	337
18.3	Implementation of p -order Conic Programming Problems via Polyhedral Approximations	341
18.3.1	Polyhedral Approximations of p -order Cones	343
18.3.2	“Tower-of-Variables” (Ben-Tal and Nemirovski [4])	344
18.3.3	Polyhedral Approximations of 3-dimensional p -order Cones	346
18.4	Case Study	349
18.5	Conclusions	351
	References	351
19	Local Neighborhoods for the Multidimensional Assignment Problem	353
	Eduardo L. Pasiliao Jr.	
19.1	Introduction	353

19.2	Neighborhoods	355
19.2.1	Intrapermutation Exchanges	356
19.2.2	Interpermutation Exchanges	361
19.3	Extensions	364
19.3.1	Variable Depth Interchange	364
19.3.2	Path Relinking	364
19.3.3	Variable Neighborhood	368
19.4	Discussion	369
	References	370

Dynamics of Information Systems

Theory and Applications

Hirsch, M.; Pardalos, P.; Murphey, R. (Eds.)

2010, XIV, 372 p. 123 illus., 78 illus. in color., Hardcover

ISBN: 978-1-4419-5688-0
