

Table of Contents

Introduction	xix
PART I WirelessHART in a Nutshell.....	1
Chapter 1 Overview	3
1.1 About the HART Standard	3
1.2 About the WirelessHART Standard	4
1.3 The Layers	7
1.4 A Simple Example	12
Chapter 2 Physical Layer	15
2.1 Physical Layer Services	16
2.1.1 Message SPs	16
2.1.2 Management SPs	16
Chapter 3 Data Link Layer	19
3.1 Data Link Layer Services	20
3.1.1 Message SPs	20
3.1.2 Management SPs	21
3.2 Logical Link Control	23
3.2.1 The DLPDU	23
3.2.2 DLPDU Types	24
3.2.3 DLPDU Priority and Flow Control	24
3.2.4 Error Detection Coding and Security	25
3.3 Media Access Control	25
3.3.1 Slot Timing	25
3.3.2 Communication Tables and Buffers	27
3.3.3 Link Scheduling	27
Chapter 4 Network Layer and Transport Layer	29
4.1 Overview	29
4.1.1 Communication Traffic	29
4.1.2 Routing	30
4.1.3 Security	31
4.2 Network Layer Services	32
4.2.1 Network Layer Message SPs	32
4.2.2 Network Layer Management Services	33
4.3 Network Layer Specification	34
4.3.1 Network Layer PDUs	34

4.3.2 Transport Layer PDU	37
Chapter 5 Application Layer	39
5.1 Application Layer Interface.....	39
5.2 Dynamic and Device Variables	44
5.3 Host Conformance Classifications	44
Chapter 6 WirelessHART Network	45
6.1 Field Devices	46
6.1.1 General Requirements.....	46
6.1.2 Maintenance Port	46
6.1.3 WirelessHART Device Interface	47
6.2 Router Device	48
6.3 Adapter	48
6.4 Handheld.....	49
6.5 Gateway and Access Point	50
6.5.1 General Requirements.....	50
6.5.2 Gateway Model	51
6.6 Network Manager and Security Manager	55
6.6.1 Core Network Functions	55
6.6.2 Network Manager Requirements	58
6.6.3 Scheduling.....	60
PART II WirelessHART in Depth.....	63
Chapter 7 An Example	65
7.1 Network Management and Host Request.....	66
7.2 Process Measurement	69
7.3 Scheduling Example – Single Hop.....	70
7.4 Scheduling Example – Multiple Hop	71
Chapter 8 Discourses on the Stack	73
8.1 Physical Layer	73
8.1.1 Physical Channel and Maximum Bandwidth.....	73
8.1.2 Packet Length versus Reliability	74
8.1.3 Channel Hopping	74
8.1.4 Health Report	75
8.2 Data Link Layer.....	76
8.2.1 Timeslot	76
8.2.2 Links.....	78
8.2.3 Synchronization	79
8.2.4 Keep Alive Interval.....	80
8.2.5 Clock Drift and Precision.....	82
8.2.6 Broadcast Messages	82

8.3 Network and Transport Layer.....	83
8.3.1 Session and Transport Table, Who Owns Who?	83
8.3.2 The Security Layer	84
8.3.3 Broadcast and Response.....	84
8.3.4 Block Data Transfer	84
8.3.5 Transport Type Codes	85
8.4 Application Layer	85
8.4.1 Commands and Messages	85
8.4.2 Wireless verses Wired Command Formats	86
8.4.3 Some Interesting Commands	87
8.4.4 Burst Data and Delayed Response	88
8.5 Topics that Cross Layers	89
8.5.1 The Encryption Algorithm	89
8.5.2 Message Life Time.....	97
8.5.3 Retry	98
8.5.4 MSB and LSB, Big Endian and Small Endian	99
8.5.5 Short Address and Long Address.....	100
8.5.6 Nonce Counter and Sequence Numbers	100
8.5.7 Timestamp and ASN Time	103
8.5.8 Master and Slave	103
8.5.9 Broadcast and Unicast.....	104
8.6 Other Topics	104
8.6.1 Memory Footprint	104
8.6.2 Key Change.....	105
Chapter 9 Discourses on the Mesh Network.....	107
9.1 The Birth of a WirelessHART Mesh.....	107
9.2 Device Life Cycle in the Network	107
9.2.1 Pre-configure the New Device.....	108
9.2.2 Network Device Advertise	108
9.2.3 New Device Synchronize.....	109
9.2.4 Join Request	110
9.2.5 Join Reply.....	111
9.2.6 More Configurations	112
9.2.7 Keep in the Network	113
9.2.8 Disconnect.....	113
9.2.9 Rejoin	113
9.3 Routing	114
9.3.1 Source Routing	114
9.3.2 Graph Routing.....	114
9.3.3 Mixed Routing	115
9.3.4 Superframe Routing	116
9.3.5 Proxy Routing	117
9.3.6 Broadcast Routing.....	118

9.4 Communication with the Host.....	119
9.5. Network Management	120
9.5.1 Superframe Lengths	120
9.5.2 Allocating Bandwidth for the Host Application	120
9.5.3 Some Comments	121
9.6 Redundancy	122
9.6.1 Device Redundancy	122
9.6.2 Path Redundancy	123
9.6.3 Broadcast Redundancy.....	127
9.7 Scalability	127
9.8 Low Power Mode and Battery Life.....	127
9.9 Interoperability and Interchangeability	129
9.10 Unwanted Access to a WirelessHART Mesh.....	129
9.10.1 Jamming.....	129
9.10.2 Key Discovery	131
Chapter 10 Discourses in General	133
10.1 The WirelessHART Standard and the ISO OSI Standard.....	133
10.2 Radio Basics	135
10.2.1 Radio Basics.....	135
10.2.2 Spread Spectrum Modulation	138
10.2.3 Media Access Control.....	139
10.2.4 The Reason for 2.4GHz Band.....	141
10.3 Why Centralized Control.....	141
10.4 Field Survey.....	143
10.5 The WirelessHART Standard and the IEEE 802.15.4 Standard	144
10.5.1 WirelessHART Values in IEEE 802.15.4 Header Fields	144
10.5.2 The Security Method.....	145
10.5.3 Maximum MAC Payload.....	146
10.5.4 Other Comparisons	146
10.5.5 Some Added Benefits with the IEEE 802.15.4 Standard	147
10.5.6 Beacon.....	147
10.5.7 Configure IEEE 802.15.4 Stack for WirelessHART Stack	149
10.6 Coexistence.....	150
10.6.1 The IEEE 802.15.4 Standard	151
10.6.2 The IEEE 802.11 Standard	151
10.6.3 Other Standards.....	153
10.6.4 Coexistence Test Scenarios.....	153
10.7 The HART Standard and Other Fieldbus Standards.....	154
10.8 What the WirelessHART Standard Does Not	155
10.9 Security and Reliability	155
10.10 Do I Need to Know All These to Use WirelessHART Technology?...	156

PART III WirelessHART in Practice.....	157
Chapter 11 Test and Diagnostic Tools.....	159
11.1 The Wi-Analys Tool	160
11.2 The Wi-HTest Tool.....	163
11.2.1 WirelessHART Test Specification and Test Scripts	164
11.2.2 Wi-HTest Architecture.....	166
11.3 The Post Process Suite.....	173
Chapter 12 A Fast Approach to Equip a HART Device with WirelessHART Capability	175
12.1 The WirelessHART Adapter	175
12.2 A WirelessHART Adapterlite	175
Chapter 13 Development Recommendations.....	177
13.1 OS or No OS	177
13.2 Timestamping Incoming Messages	178
13.3 Realizing Network Layers in the Stack	178
13.4 API between Adjacent Network Layers in the Stack	179
13.5 A Timer Module	179
13.5.1 Timeslots in the WirelessHART Standard.....	180
13.5.2 Standard-Conscious Timer Module	180
13.5.3 The Implementation	182
13.6 Hardware Considerations	183
13.7 Miscellaneous Comments.....	184
Chapter 14 Deployment Recommendations	187
14.1 Scope the Network.....	187
14.2 Design the Network	187
14.3 Deploy the Network.....	189
14.4 More Comments	191
PART IV WirelessHART in the Bigger Picture.....	193
Chapter 15 Why WirelessHART	195
15.1 The WirelessHART Standard Is Based on Proven Solutions.....	195
15.2 The WirelessHART Standard Embraces the Best Technology.....	196
15.3 The WirelessHART Standard Has an Easy Adoption Path.....	197
Chapter 16 Wireless and Real-Time Industrial Process Control	201
16.1 Challenges of Wireless Control	201
16.1.1 Process Control Networks and their Wireless Counterparts.....	202
16.1.2 Process Control with Sensor Networks.....	204
16.2 Improving PID Control with Unreliable Communications	208
16.2.1 The Control Loop	209
16.2.2 The Standard PID Algorithm	209

16.2.3 The Enhanced PID Algorithm	212
16.2.4 Experiments and Results	214
16.2.5 Active Traffic Reduction to Increase Battery Life	219
16.2.6 Comments	220
Chapter 17 Research in Real-Time Wireless Mesh Networks	223
17.1 Real-Time Systems	223
17.2 Selected Topics	224
Chapter 18 Future of Wireless and the WirelessHART Standard	227
18.1 Wireless Sensor Network in Process Automation	227
18.1.1 Wireless Mesh Applications	227
18.1.2 Wireless Products	228
18.2 Location Awareness	230
18.2.1 Location Awareness Techniques	230
18.2.2 A WirelessHART Location-Determination Application	232
18.3 Cyber-Physical Systems and WirelessHART Systems	234
18.4 What's next for the WirelessHART Standard?	239
18.4.1 Discrete Devices and Values	241
18.4.2 Location	242
18.4.3 Handhelds	242
18.4.4 Public/Private Key for Handheld	243
18.4.5 Control over Wireless	243
PART V Appendices	245
Chapter 19 Attribute and Field Values	247
19.1 Comments on Message Field Values	247
19.2 WirelessHART Message Fields	248
Chapter 20 Symbols and Abbreviations	253
Chapter 21 Definitions	257
Chapter 22 References	267
22.1 HART 7 Protocol Specifications	267
22.2 Related HART Documents	268
22.3 Related Documents Cited by HART	268
22.4 Other References	269
Index	273

WirelessHART™

Real-Time Mesh Network for Industrial Automation

Chen, D.; Nixon, M.; Mok, A.

2010, XXII, 276 p., Hardcover

ISBN: 978-1-4419-6046-7
