1 Introduction 1
Mohieddine Jelali and Biao Huang
1.1 Motivation 1
1.2 Typical Valve-controlled Loop 2
1.3 Stiction Phenomenon and Related Effects 4
1.4 Input–Output Relation of Valves Under Stiction 6
1.5 Limit Cycles due to Stiction 9
1.6 Typical Observations in Control Loops with Sticky Valves 12
1.7 Industrial Examples of Loops with Stiction 15
1.8 Summary and Conclusions 18

Part I Stiction Modelling and Oscillation Detection

2 Stiction Modelling 21
M.A.A. Shoukat Choudhury, Nina F. Thornhill, Manabu Kano and
Sirish L. Shah
2.1 Introduction 22
2.2 Physics-based Stiction Modelling 22
2.3 Data-driven Stiction Modelling 24
 2.3.1 One-parameter Stiction Model 24
 2.3.2 Two-parameter Stiction Model 24
 2.3.3 Choudhury’s Stiction Model 25
 2.3.4 Simulation of the Stiction Model 28
 2.3.5 Kano’s Stiction Model 29
2.4 Comparison Between Choudhury’s and Kano’s Stiction Models .. 32
 2.4.1 Similarities 32
 2.4.2 Differences 32

2.4.3	Comparisons Using an Industrial Example.....	32
2.5	Summary and Conclusions	35
3	An Alternative Stiction-modelling Approach and Comparison of Different Stiction Models	37
	Q. Peter He, Jin Wang and S. Joe Qin	
3.1	Introduction	37
3.2	He's Two-parameter Model	38
3.3	Three Data-driven Models	40
3.3.1	Implementation of the First-principles Model	41
3.3.2	Comparison of Data-driven Models	43
3.4	Further Investigation of Valve Stiction	45
3.5	He's Three-parameter Model	49
3.6	Simulation Results	51
3.7	An Industrial Example	56
3.8	Summary and Conclusions	57
3.9	Appendix: Proof of the Equivalence Between He's Two-parameter and Three-parameter Model	58
4	Detection of Oscillating Control Loops	61
	Srinivas Karra, Mohieddine Jelali, M. Nazmul Karim and Alexander Horch	
4.1	Introduction	62
4.2	Root-causes for Oscillatory Control Loops	62
4.2.1	Poor Process and Control System Design	62
4.2.2	Aggressive Controller Tuning	63
4.2.3	Non-linearities in Control-loop Hardware	63
4.2.4	External Oscillatory Disturbances	64
4.3	Characterisation of Oscillations	64
4.3.1	Auto-covariance Function	64
4.3.2	Power Spectrum	65
4.3.3	Strength of Oscillations	65
4.4	Techniques for Detection of Oscillations in Control Loops	67
4.4.1	Detection of Spectral Peaks	67
4.4.2	Regularity of Large Enough Integral of Absolute Error ..	69
4.4.3	Regularity of Upper and Lower IAEs and Zero-crossings	72
4.4.4	Decay-ratio Approach of the Auto-correlation Function..	74
4.4.5	Regularity of Zero-crossings of the Auto-correlation Function	76
4.4.6	Spectral Envelope Method	78
4.5	Critical Evaluation of Oscillation-detection Methods	80
4.5.1	Features of Industrial Control-loop-oscillation Detection .	80
4.5.2	Detection Test Examples	81
4.5.3	Signal with Coloured Noise	83
4.5.4	Signal with One Predominant Oscillation	84
4.5.5	Signal with Dampened Oscillation	85

4.5.6	Signal with Multiple Oscillations	87
4.5.7	Signal with Intermittent Oscillations	90
4.6	Comprehensive Oscillation Characterisation	93
4.7	Industrial Case Studies	94
4.7.1	Oscillating Flow Control Loop	95
4.7.2	Unit-wide Oscillation Caused by a Sensor Fault	96
4.7.3	Plant-wide Oscillation Caused by a Valve Fault	97
4.8	Summary and Conclusions	100

Part II Advances in Stiction Detection and Quantification

5	Shape-based Stiction Detection	103
	Manabu Kano, Yoshiyuki Yamashita and Hidekazu Kugemoto	
5.1	Introduction	103
5.2	Method Description	104
5.2.1	Method A	104
5.2.2	Method B	105
5.2.3	Method C	106
5.3	Key Issues	107
5.4	Simulation Results	108
5.5	Application to Industrial Loops	111
5.6	Summary and Conclusions	113
6	Stiction Detection Based on Cross-correlation and Signal Shape	115
	Alexander Horch	
6.1	Introduction	115
6.2	The Cross-correlation Function	117
6.3	Industrial Examples	120
6.3.1	Loop Interaction I	120
6.3.2	Loop Interaction II	121
6.3.3	Flow Control Loop I	123
6.3.4	Flow Control Loop II	125
6.3.5	Level Control	125
6.4	Theoretical Explanation	126
6.4.1	Correlation for Oscillating External Disturbances	127
6.4.2	Tight Tuning	129
6.4.3	Correlation in the Presence of Stiction	129
6.5	Conclusions (Cross-correlation Method)	131
6.6	Stiction Detection for Integrating Processes	132
6.7	Detection in Integrating Loops – Basic Idea	132
6.7.1	Differentiation and Filtering	133
6.7.2	Sample Histogram	135
6.7.3	Distribution for the Stiction Case	136
6.7.4	Distribution for the Non-stiction Case	138
6.8	Examples	142
6.8.1	Level Control Loop with Stiction	142

6.8.2	Level Control Loop Without Stiction	143
6.8.3	Level Control Loop with Deadband	143
6.9	Self-regulating Processes	143
6.9.1	Flow Control Loop with Stiction	144
6.9.2	Flow Control Loop Without Stiction	145
6.9.3	Loops with Dominant P-control	145
6.10	Summary and Conclusions	147
7	Curve Fitting for Detecting Valve Stiction	149
	Q. Peter He and S. Joe Qin	
7.1	Introduction	149
7.2	Method Description	151
7.2.1	Sinusoidal Fitting	152
7.2.2	Triangular Fitting	153
7.2.3	Stiction Index	153
7.3	Key Issues	154
7.4	Simulation Results	154
7.5	Application to Industrial Loops	159
7.6	Summary and Conclusions	161
8	A Relay-based Technique for Detection of Stiction	165
	Claudio Scali and Maurizio Rossi	
8.1	Introduction	166
8.2	Trends of Different Variables	168
8.3	Method Description	170
8.3.1	Basic Idea	170
8.3.2	Stiction Index	171
8.3.3	Fitting Procedure	172
8.3.4	Fitting Algorithm	172
8.4	Simulation Results	175
8.4.1	Nominal Case	175
8.4.2	Presence of Noise	177
8.5	Application to Plant Data	178
8.6	Summary and Conclusions	181
9	Shape-based Stiction Detection Using Area Calculations	183
	Timothy I. Salsbury and Ashish Singhal	
9.1	Introduction	183
9.2	Method Description	185
9.2.1	Theoretical Basis	187
9.2.2	Stiction Detection Hypothesis Test	190
9.2.3	Noise Effects and Practical Implementation	191
9.3	Key Issues	197
9.4	Simulation Results	198
9.5	Application to Industrial Loops	200

9.5.1	Temperature Control Loop with Stiction from a Building Automation System	201
9.5.2	Temperature Control Loop with Stiction from a Pulp and Paper Plant	202
9.6	Summary and Conclusions	203
10	Estimation of Valve Stiction Using Separable Least-squares and Global Search Algorithms	205
	Mohieddine Jelali	
10.1	Introduction	205
10.2	Basic Approach	207
10.2.1	Identification Model Structure: Hammerstein Model	208
10.2.2	Linear Model	208
10.2.3	Stiction Model	209
10.3	Identification Approach	210
10.3.1	Separable Least-squares Estimator	210
10.3.2	Global Search Algorithms	213
10.4	Key Issues	215
10.4.1	Model Structure Selection	215
10.4.2	Time-delay Estimation	216
10.4.3	Determination of Initial Parameters and Incorporation of Constraints	218
10.5	Simulation Studies	219
10.5.1	First-order-plus-time-delay Process	220
10.5.2	Integrating Process with Time Delay	220
10.6	Industrial Case Studies	221
10.6.1	Loop CHEM 25: Pressure Control Loop	221
10.6.2	Loop PAP 2: Flow Control Loop	224
10.6.3	Loop CHEM 24: Flow Control Loop with Setpoint Changes	224
10.6.4	Loop POW 2: Level Control Loop	225
10.6.5	Loop POW 4: Level Control Loop	226
10.6.6	Loop MIN 1: Temperature Control Loop	226
10.6.7	Loop CHEM 70: Flow Control Loop with External Disturbances	226
10.7	Summary and Conclusions	227
11	Stiction Estimation Using Constrained Optimisation and Contour Map	229
	Kwan Ho Lee, Zhengyun Ren and Biao Huang	
11.1	Introduction	229
11.2	Stiction Model of Control Valve	231
11.2.1	General Conception	231
11.2.2	Physical Model of Valve Stiction	231
11.2.3	Kano's Valve-stiction Model	232
11.2.4	Choudhury's Valve-stiction Model	232

11.2.5	He's Valve-stiction Model	232
11.3	Existing Stiction-detection Methods	233
11.3.1	Open-loop Methods	233
11.3.2	Closed-loop Methods	233
11.3.3	Discussion of Existing Methods	234
11.4	Closed-loop Stiction Detection and Quantification	235
11.4.1	Basic Principle and Important Steps	235
11.4.2	Stiction Detection and Quantification Procedure	236
11.4.3	Search Space of Stiction-model Parameters	237
11.4.4	Constrained Parameter-search Techniques	238
11.4.5	Advantages	240
11.5	Stiction Detection: Identifiability Analysis	241
11.5.1	Heuristic Illustration of Closed-loop Identifiability	241
11.5.2	Identifiability Analysis for Closed-loop Systems with Valve Stiction	243
11.6	Simulations	245
11.7	Industrial Applications	251
11.7.1	Illustrative Industrial Examples	251
11.7.2	Comparative Study	256
11.8	Graphical User Interface	260
11.9	Summary and Conclusions	265
12	Oscillation Root-cause Detection and Quantification Under Multiple Faults	267
	Srinivas Karra and M. Nazmul Karim	
12.1	Introduction	267
12.2	Preliminaries and Brief Review of Model-based Oscillation Diagnosis	268
12.2.1	Root-cause for Oscillations and Compensation Techniques	268
12.2.2	Oscillation Diagnosis and Root-cause Quantification	269
12.2.3	Challenges to be Addressed	270
12.3	Overview of the Root-cause Detection and Quantification Methodology	270
12.3.1	Revisiting Control-valve Characteristics Under Stiction ..	270
12.3.2	Oscillation Detection and Diagnosis Methodology	271
12.4	Process-model Identification Under Non-stationary Disturbances ..	271
12.4.1	Identification of EARMAX Model	273
12.4.2	Illustrative Example: Identification Under Non-stationary Disturbance	275
12.5	Root-cause Detection and Quantification	278
12.5.1	OP–PV Model Identification Methodology	278
12.5.2	Identification of Controller Transfer Function	280
12.5.3	Oscillation Root-cause Detection and Quantification Methodology	280

- 12.6 Illustrative Example: Oscillation Diagnosis Under Various Faulty Situations 281
 - 12.6.1 Stiction 281
 - 12.6.2 Oscillatory External Disturbance 283
 - 12.6.3 Aggressive Controller Tuning 284
 - 12.6.4 Stiction and Oscillatory External Disturbance 285
 - 12.6.5 Stiction and Aggressive Controller Tuning 286
 - 12.6.6 Oscillatory External Disturbance and Aggressive Controller Tuning 287
 - 12.6.7 Stiction, Aggressive Controller Tuning and Oscillatory External Disturbance 288
- 12.7 Industrial Case Studies 290
 - 12.7.1 Control Loop 1 290
 - 12.7.2 Control Loop 2 291
 - 12.7.3 Control Loop 3 292
- 12.8 Summary and Conclusions 293
- 13 Comparative Study of Valve-stiction-detection Methods 295**

Mohieddine Jelali and Claudio Scali

 - 13.1 Introduction 295
 - 13.2 Selected Methods 296
 - 13.3 Industrial Control Loops Involved in the Study 298
 - 13.4 Application Results and Discussion 302
 - 13.4.1 Application Results 302
 - 13.4.2 Synthesis and Discussion 303
 - 13.4.3 Efficiency of the Techniques, Problems and Countermeasures 306
 - 13.4.4 Comparison on 20 Loops with Known Problems 317
 - 13.4.5 Selected Examples 317
 - 13.4.6 Graphical User Interface 319
 - 13.5 Suggestions 321
 - 13.6 Summary and Conclusions 323
 - 13.7 Appendix: Tables of Results of the Comparative Study 324
- 14 Conclusions and Future Research Challenges 359**

Biao Huang, Mohieddine Jelali and Alexander Horch

 - 14.1 Summary of the Book 359
 - 14.2 Future Research Challenges 362
 - 14.2.1 Stiction Modelling 362
 - 14.2.2 Oscillation Detection 363
 - 14.2.3 Stiction Detection and Estimation 364
 - 14.2.4 Stiction Control 365

Appendix A Evaluated Industrial Control Loops 367

Appendix B Review of Some Non-linearity and Stiction-detection

Techniques 371

 B.1 Bicoherence Method..... 371

 B.1.1 Non-Gaussianity Index 372

 B.1.2 Non-linearity Index 373

 B.1.3 Total Non-linearity Index 374

 B.1.4 Ellipse Fitting 374

 B.2 Surrogates Analysis 374

 B.2.1 Surrogate Data Generation 375

 B.2.2 Non-linear Predictability Index 376
