## 1 Intelligent Manufacturing Systems

<i>E. Oztemel</i> .....	1
1.1 Introduction.....	1
1.2 Traditional Manufacturing Systems.....	3
1.3 Changes in Manufacturing Systems: a Historical Perspective .....	6
1.4 Artificial Intelligence and Intelligent Manufacturing Systems .....	13
1.4.1 Technologies of Artificial Intelligence.....	13
1.4.2 Intelligent Manufacturing Systems.....	22
1.5 Properties of Intelligent Manufacturing Systems.....	25
1.6 Architecture of Intelligent Manufacturing Systems .....	27
1.7 Holonic Manufacturing Systems.....	33
1.8 Applications of Intelligent Manufacturing Systems.....	37
1.9 Conclusions.....	39
References.....	39

## 2 Agent-based System for Knowledge Acquisition and Management Within a Networked Enterprise

<i>A.J. Soroka</i> .....	43
2.1 Agent-based and Related Systems .....	43
2.1.1 Origins of Agent Research .....	44
2.1.2 Definition of an Agent.....	46
2.1.3 Agent Architectures.....	47
2.1.4 Agent Types and Applications .....	50
2.1.5 Machine Learning for Generation of Knowledge Bases .....	53
2.2 Product Fault Knowledge Acquisition and Management .....	57
2.2.1 Automating Knowledge Base management.....	57
2.2.2 Analysis of Knowledge Base Management Process.....	58
2.3 Agent System for Knowledge Acquisition and Management .....	63
2.3.1 User Agent.....	65
2.3.2 Server Agent.....	70

2.3.3 Testing.....	79
2.4 Conclusions .....	81
References .....	81
<b>3 Multi-agent Simulation-based Decision Support System and Application in Networked Manufacturing Enterprises</b>	
<i>H. Ding, W. Wang, M. Qiu and J. Dong</i> .....	87
3.1 Introduction .....	87
3.2 Literature Review .....	88
3.2.1 Simulation Methods .....	89
3.2.2 Multi-agent Simulation .....	89
3.2.3 Tools and Applications.....	90
3.3. Problem Description and Approach.....	91
3.3.1 Platform Architecture .....	92
3.3.2 Multi-agent Supply Chain Simulation Model .....	93
3.4 Modeling and Analysis .....	94
3.4.1 Baseline Simulation Model .....	95
3.4.2 Scenario Analysis.....	95
3.4.3 Inventory Control Policy .....	96
3.4.4 Forecast Accuracy .....	97
3.4.5 Build-to-plan vs. Build-to-order.....	99
3.4.6 Procurement Policy .....	100
3.4.7 Truck Utilization .....	101
3.5 Conclusions and Perspectives.....	103
References .....	104
<b>4 A Collaborative Decision-making Approach for Supply Chain Based on a Multi-agent System</b>	
<i>Y. Ouzrout, A. Bouras, E.-H. Nfaoui and O. El Beqqali</i> .....	107
4.1 Introduction .....	108
4.2 Distributed Simulation and Supply Chain Management.....	110
4.2.1 Decision-making and Multi-agent Approaches.....	111
4.2.2 Multi-agent Systems Simulation .....	111
4.3 The Supply Chain Modeling.....	112
4.3.1 Supply Chain Modeling Methodology .....	113
4.3.2 The Safety Inventory Case Study.....	114
4.4 The Multi-agent Architecture .....	116
4.4.1 The Modeling Principle.....	116
4.4.2 Architecture.....	117
4.4.3 Negotiation Protocols.....	120
4.5 Industrial Case Study.....	122
4.6 Conclusion and Perspectives .....	125
References .....	126

## **5 Web-services-based e-Collaborative Framework to Provide Production Control with Effective Outsourcing**

<i>A. Keshari, M. K. Tiwari and R. Teti</i> .....	129
5.1 Introduction.....	130
5.2 Literature Review .....	131
5.3 Design of Web-services-based e-Collaborative Framework.....	133
5.3.1 The Proposed Framework.....	133
5.3.2 Design of System Components of Model.....	134
5.3.3 The Mathematical Model .....	139
5.3.4 Overall Objective Function .....	142
5.4 Protocols of Functional Agents.....	143
5.4.1 Machine Agent Protocol.....	143
5.4.2 Production Controlling Agent Protocol.....	144
5.4.3 Task Management Agent (TMA) Protocol.....	145
5.4.4 Hierarchy of Steps in Web-services-based e-Collaborative System	145
5.5 Results and Discussion .....	145
5.5.1 Sample-sort Simulated Annealing Algorithm .....	148
5.5.2 Experimental Analysis .....	148
5.6 Conclusions.....	157
References.....	158

## **6 Isoarchic and Multi-criteria Control of Supply Chain Network**

<i>F. Ounnar and P. Pujo</i> .....	161
6.1 Introduction.....	161
6.2 Supply Chain Management Limits .....	163
6.3 Control of a Dynamic Logistic Network: Isoarchic and Multi-criteria Control.....	164
6.3.1 Description of the Interacting Entities.....	165
6.3.2 Definition of Self-organized Control.....	166
6.3.3 Support Structure: Autonomous Control Entity .....	171
6.4 Distributed Simulation of a Dynamic Logistic Network .....	174
6.4.1 High-level Architecture Components.....	174
6.4.2 Integration of the DEVS-ACE Models in High-level Architecture Environment.....	175
6.5 Experiments via Simulation.....	175
6.6 Conclusion and Future Work.....	178
References.....	179

## **7 Supply Chain Management Under Uncertainties:**

### **Lot-sizing and Scheduling Rules**

<i>A. Dolgui, F. Grimaud and K. Shchamialiova</i> .....	181
7.1 Introduction.....	181
7.2 Short Presentation of Lot-sizing and Scheduling Problems.....	184
7.2.1 Basic Models and Extensions.....	187

7.2.2 Lot-sizing and Scheduling Under Uncertainties .....	191
7.2.3 Optimization Techniques .....	196
7.3 A Case Study .....	197
7.3.1 Description of the Case Study .....	197
7.3.2 Representation of Uncertainties .....	200
7.3.3 Objective Function .....	202
7.3.4 Decomposition for Optimization .....	203
7.3.5 Numerical Example .....	210
7.3.6 Numerical Results .....	214
7.4 Conclusions .....	216
References .....	217
 <b>8 Meta-heuristics for Real-time Routing Selection in Flexible Manufacturing Systems</b>	
<i>M. Souier, A. Hassam and Z. Sari</i> .....	221
8.1 Introduction .....	222
8.2 Literature Review .....	223
8.3 Job-shop .....	225
8.3.1 Job-shop Problem .....	225
8.3.2 Simulation of a Flexible Manufacturing System Environment .....	226
8.4 Dissimilarity Maximization Method and Modified DMM Rules .....	228
8.4.1 Dissimilarity Maximization Method for Real-time Routing Selection .....	228
8.4.2 Modified Dissimilarity Maximization Method for Real-time Routing Selection .....	229
8.5 Meta-heuristics for Job-shop Routing .....	230
8.5.1 Ant Colony Optimization .....	230
8.5.2 Simulated Annealing .....	231
8.5.3 Particle Swarms Optimization .....	232
8.5.4 Genetic Algorithms .....	234
8.5.5 Taboo Search .....	235
8.5.6 Electromagnetism-like Method .....	236
8.6 Performance Evaluation of Routing Selection Methods .....	237
8.6.1 System Simulation Without Presence of Breakdown .....	237
8.6.2 System Simulation With Presence of Breakdown .....	241
8.7 Conclusions .....	246
References .....	247
 <b>9 Meta-heuristic Approaches for Multi-objective Simulation-based Optimization in Supply Chain Inventory Management</b>	
<i>D. Sánchez, L. Amodeo and C. Prins</i> .....	249
9.1 Introduction .....	249
9.2 Literature Review .....	251
9.3 Problem Formulation .....	253

9.4 Implementation of Selected Evolutionary Algorithms.....	256
9.4.1 Non-dominated Sorting Genetic Algorithm II.....	256
9.4.2 Strength Pareto Evolutionary Algorithm II.....	258
9.4.3 Strength Pareto Evolutionary Algorithm IIb.....	259
9.4.4 Multi-objective Particle Swarm Optimization.....	260
9.5 Computational Experiments and Analysis.....	262
9.5.1 Evaluation Criteria .....	262
9.5.2 Parameters Used.....	263
9.5.3 Experimental Results.....	263
9.6 Conclusion.....	267
References.....	268
 <b>10 Diverse Risk/Cost Balancing Strategies for Flexible Tool Management in a Supply Network</b>	
<i>D. D'Addona and R. Teti</i> .....	271
10.1 Introduction.....	271
10.2 Multi-agent Tool Management System .....	272
10.3 Flexible Tool Management Strategies.....	275
10.3.1 Current Inventory-Level Decision Making (INVADAPT) .....	277
10.3.2 Fixed-Horizon Inventory-Level Decision Making (I-FUTURE) ..	279
10.3.3 Variable-Horizon Inventory-Level Decision Making (INVADAPT_NS).....	280
10.4 Tool Inventory Management Simulations .....	281
10.4.1 Simulation Through INVADAPT .....	287
10.4.2 Simulation Through I-FUTURE .....	294
10.4.3 Simulation Through INVADAPT_NS .....	301
10.5 Test Case Applications.....	309
10.6 Conclusions and Future Work .....	312
References.....	312
 <b>11 Intelligent Integrated Maintenance Policies for Manufacturing Systems</b>	
<i>N. Rezg and S. Dellagi</i> .....	315
11.1 Introduction.....	315
11.2 Optimal Maintenance Policy Considering the Influence of the Production Plan on the Deterioration of the Manufacturing System.....	318
11.2.1 Problem Statement .....	318
11.2.2 Problem Formulation.....	319
11.2.3 Influence of Manufacturing System Deterioration on the Optimal Production Plan .....	324
11.2.4 Optimization of the Maintenance Policy .....	326
11.3 Intelligent Periodic Preventive Maintenance Policy in Finite Horizon with an Adaptive Failure Law.....	330
11.3.1 Problem Description.....	330

11.3.2 Model Formulation and Intelligent Determination of the Optimal Solution .....	332
11.3.3 Numerical Example.....	335
11.4 Conclusions .....	338
References .....	339
<b>12 Enhancing the Effectiveness of Multi-pass Scheduling Through Optimization via Simulation</b>	
<i>T. Yoo, H.-B. Cho and E. Yücesan</i> .....	341
12.1 Introduction .....	342
12.2 Multi-pass Scheduling Using Nested Partitions and Optimal Computing Budget Allocation.....	346
12.2.1 The Proposed Multi-pass Scheduling Framework.....	346
12.2.2 The Outer Loop: Nested Partitions.....	346
12.2.3 The Inner Loop: Optimal Computing Budget Allocation.....	348
12.3 Implementation of Nested Partitions and Optimal Computing Budget Allocation .....	349
12.3.1 Nested Partitions: Partitioning Strategy .....	349
12.3.2 Nested Partitions: Sampling Strategy.....	351
12.3.3 Nested Partitions: Backtracking Strategy.....	351
12.3.4 Optimal Computing Budget Allocation: Ranking and Selection Strategy .....	352
12.3.5 Performance of Nested Partitions and Optimal Computing Budget Allocation.....	353
12.4 Experimental Design and Analysis.....	354
12.4.1 Experimental Assumptions.....	354
12.4.2 Experimental Design .....	356
12.4.3 Experimental Results for the Probability of Correct Selection.....	357
12.5 Conclusions .....	363
References .....	364
<b>13 Intelligent Techniques for Safety Stock Optimization in Networked Manufacturing Systems</b>	
<i>B. Desmet, E.-H. Aghezzaf and H. Vanmaele</i> .....	367
13.1 Introduction .....	367
13.2 Multi-echelon Inventory Control in Networked Manufacturing Systems.....	369
13.3 Literature Review .....	374
13.4 System Safety Stock Optimization in $n$ -echelon Distribution Systems	377
13.4.1 Introduction of a Two-echelon Distribution System.....	378
13.4.2 Characterization of the Back-order Service Time in the Central Warehouse.....	380
13.4.3 Characterization of the Actual Retailer Replenishment Lead Time .....	382

13.4.4 System Safety Stock Optimization in a Two-echelon Distribution System .....	384
13.5 System Safety Stock Optimization in $n$ -echelon Assembly Systems .....	386
13.5.1 Introduction of a Two-echelon Assembly System .....	386
13.5.2 Characterization of the Backorder Service Time for a Subset of Components .....	389
13.5.3 Characterization of the Incoming Service Time to the Assembly .....	390
13.5.4 Characterization of the Actual Assembly Lead Time .....	391
13.5.5 System Safety Stock Optimization in a two-echelon Assembly System .....	392
13.5.6 Distribution System as Special Case of the Assembly System .....	394
13.6 System Safety Stock Optimization in Generic Networks .....	395
13.6.1 Introduction of a Spanning Tree System .....	395
13.6.2 Characterization of Actual Replenishment Lead Times in a Spanning Tree System .....	402
13.6.3 System Safety Stock Optimization for a Spanning Tree System .....	415
13.6.4 Extension to Generic Systems .....	416
13.7 Conclusions .....	418
References .....	419

## **14 Real-world Service Interaction with Enterprise Systems in Dynamic Manufacturing Environments**

<i>S. Karnouskos, D. Savio, P. Spiess, D. Guinard, V. Trifa and O. Baecker</i> ..	423
14.1 Motivation .....	424
14.2 Real-world Awareness .....	426
14.2.1 Device Integration Protocols .....	426
14.2.2 Device-to-Business Coupling .....	428
14.2.3 Integrating Heterogeneous Devices .....	429
14.3 Enterprise Integration .....	430
14.4 Integrating Manufacturing Equipment with the SOCRADES Integration Architecture .....	432
14.5 Towards Dynamic Adaptation .....	435
14.5.1 Simulation .....	437
14.5.2 Self-healing Mechanisms .....	438
14.5.3 Self-optimizing Mechanisms .....	439
14.6 Concept Validation in Prototypes .....	440
14.6.1 Machine Monitoring, Dynamic Decision and Order Adaptation .....	441
14.6.2 The Future Shop Floor: Mashup of Heterogeneous Service-oriented-architecture Devices and Services .....	444
14.6.3 Dynamic Supply Chain Management Adaptation .....	446
14.6.4 Taming Protocol Heterogeneity for Enterprise Services .....	449
14.6.5 Energy Monitoring and Control via Representational State Transfer .....	451
14.7 Discussion and Future Directions .....	454

14.8 Conclusions and Future Work .....	455
References .....	455
<b>15 Factory of the Future: A Service-oriented System of Modular, Dynamic Reconfigurable and Collaborative Systems</b>	
<i>A.-W. Colombo, S. Karnouskos and J.-M. Mendes</i> .....	459
15.1 Introduction .....	460
15.2 The Emergence of Cooperating Objects.....	461
15.3 The Cross-layer Service-oriented-architecture-driven Shop Floor .....	463
15.4 Dynamic Reconfiguration of a Service-oriented-architecture-based Collaborative Shop Floor.....	465
15.4.1 Methodology .....	466
15.4.2 Example.....	468
15.5 Analysis Behind the Engineering Methods and Tools.....	469
15.5.1 Applying Functional Analysis to Validate Service Composition Paths in High-level Petri-net-based Orchestration Models .....	469
15.5.2 Example.....	472
15.6 A Service-oriented-architecture-based Collaborative Production Management and Control System Engineering Application.....	474
15.7 Conclusions and Future Work .....	479
References .....	480
<b>16 A Service-oriented Shop Floor to Support Collaboration in Manufacturing Networks</b>	
<i>J. Barata, L. Ribeiro and A.-W. Colombo</i> .....	483
16.1 Introduction .....	483
16.2 Agility in Manufacturing .....	485
16.3 Collaborative Networks .....	487
16.4 Service-oriented-architecture as a Method to Support Agility and Collaboration .....	488
16.5 Architecture .....	493
16.5.1 The Role of Componentization .....	493
16.5.2 Service Exposure, Composition and Aggregation.....	495
16.5.3 The Role of Orchestration in Control, Monitoring and Diagnosis .....	496
16.6 An Implementation .....	498
16.6.1 Manufacturing Device Service Implementation.....	498
16.6.2 Coalition Leader Service Implementation .....	498
16.6.3 Application Example: a Collaborative Pick-and-place Operation.....	499
16.7 Conclusions .....	501
References .....	501
<b>Index</b> .....	505

Artificial Intelligence Techniques for Networked  
Manufacturing Enterprises Management

Benyoucef, L.; Grabot, B. (Eds.)

2010, XXII, 508 p. 228 illus., Hardcover

ISBN: 978-1-84996-118-9
