
Contents

1	Introduction	1
1.1	Biological Processes and Networks in Cellular Systems	2
1.1.1	Gene Regulation: Gene Regulatory Networks	3
1.1.2	Signal Transduction: Signal Transduction Networks	6
1.1.3	Protein Interactions: Protein Interaction Networks	8
1.1.4	Metabolism: Metabolic Networks	8
1.1.5	Cell Cycles and Cellular Rhythms: Nonlinear Network Dynamics	11
1.2	A Primer to Networks	13
1.2.1	Basic Concepts of Networks	14
1.2.2	Topological Properties of Networks	15
1.3	A Primer to Dynamics	17
1.3.1	Dynamics and Collective Behavior	17
1.3.2	System States	18
1.3.3	Structures and Functions	18
1.3.4	Cellular Noise	20
1.3.5	Time Delays	20
1.3.6	Multiple Time Scales	21
1.3.7	Robustness and Sensitivity	22
1.4	Network Systems Biology and Synthetic Systems Biology	23
1.5	Outline of the Book	24
2	Dynamical Representations of Molecular Networks	31
2.1	Biochemical Reactions	31
2.2	Molecular Networks	38
2.3	Graphical Representation	38
2.3.1	Example of Interaction Graphs	39
2.3.2	Example of Incidence Graphs	42
2.3.3	Example of Species-reaction Graphs	42
2.4	Biochemical Kinetics	43
2.5	Stochastic Representation	44

2.5.1	Master Equations for a General Molecular Network	45
2.5.2	Stochastic Simulation	51
2.5.3	Analysis of Sensitivity and Robustness of Master Equations	56
2.5.4	Langevin Equations	57
2.5.5	Fokker–Planck Equations	62
2.5.6	Cumulant Equations	65
2.6	Deterministic Representation	68
2.6.1	Basic Kinetics	68
2.6.2	Deterministic Representation of a General Molecular System	70
2.6.3	Michaelis–Menten and Hill Equations	71
2.6.4	Total Quasi-steady-state Approximation	75
2.6.5	Deriving Rate Equations	77
2.6.6	Modeling Transcription and Translation Processes	79
2.7	Hybrid Representation and Reducing Molecular Networks . . .	82
2.7.1	Decomposition of Biomolecular Networks	82
2.7.2	Approximation of Continuous Variables in Molecular Networks	86
2.7.3	Gaussian Approximation in Molecular Networks	87
2.7.4	Deterministic Approximation in Molecular Networks . . .	89
2.7.5	Prefactor Approximation of Deterministic Representation	91
2.7.6	Stochastic Simulation of Hybrid Systems	94
2.8	Stochastic versus Deterministic Representation	98
3	Deterministic Structures of Biomolecular Networks	101
3.1	A General Structure of Molecular Networks	103
3.1.1	Basic Definitions	104
3.1.2	A General Structure for Gene Regulatory Networks . . .	107
3.2	Gene Regulatory Networks with Cell Cycles	109
3.2.1	Gene Regulatory Networks for Eukaryotes	112
3.2.2	Gene Regulatory Networks for Prokaryotes	114
3.3	Interaction Graphs and Logic Gates	118
3.3.1	Interaction Graphs and Types of Interactions	118
3.3.2	Logic Gates	121
4	Qualitative Analysis of Deterministic Dynamical Networks	125
4.1	Stability Analysis	125
4.2	Bifurcation Analysis	129
4.3	Examples for Analyzing Stability and Bifurcations	132
4.3.1	A Simplified Gene Network	132
4.3.2	A Two-gene Network	135
4.3.3	A Three-gene Network	139
4.4	Robustness and Sensitivity Analysis	141

4.4.1	Robustness Measures	142
4.4.2	Sensitivity Analysis	143
4.5	Control Analysis	145
4.5.1	Control Coefficients of Metabolic Systems	145
4.5.2	Metabolic Control Theorems	147
4.6	Monotone Dynamical Systems	148
4.6.1	Notation	148
4.6.2	Decomposition of Monotone Systems	151
5	Stability Analysis of Genetic Networks in Lur'e Form	159
5.1	A Genetic Network Model	159
5.2	Stability Analysis of Genetic Networks Without Noise	162
5.3	Stochastic Stability of Gene Regulatory Networks	165
5.3.1	Mean-square Stability	165
5.3.2	Stochastic Stability with Disturbance Attenuation	169
5.4	Examples	174
6	Design of Synthetic Switching Networks	179
6.1	Types of Switches	181
6.2	Simple Switching Networks	185
6.2.1	Bistability in a Single Gene Network	185
6.2.2	The Toggle Switch	187
6.2.3	The MAPK Cascade Model	188
6.3	Design of Switching Networks with Positive Loops	190
6.4	Detection of Multistability	201
6.5	Enzyme-driven Switching Networks	208
7	Design of Synthetic Oscillating Networks	217
7.1	Simple Oscillatory Networks	218
7.1.1	Delayed Autoinhibition Networks	219
7.1.2	Goldbeter's Models	222
7.1.3	Relaxation Oscillators	226
7.1.4	Stochastic Oscillators	230
7.2	Design of Oscillating Networks with Negative Loops	232
7.2.1	Theoretical Model of Cyclic Feedback Networks	233
7.2.2	A Special Cyclic Feedback Network	235
7.2.3	A General Cyclic Feedback Network	242
7.3	Construction of Oscillators by Non-monotone Dynamical Systems	244
7.4	Design of Molecular Oscillators with Hybrid Networks: General Formalism	255

8	Multicellular Networks and Synchronization	267
8.1	A General Multicellular Network for Deterministic Models . . .	268
8.2	Deterministic Synchronization of Cellular Oscillators	271
8.2.1	Complete Synchronization	271
8.2.2	Other Types of Synchronization	274
8.3	Spontaneous Synchronization of Deterministic Models	275
8.4	Entrained Synchronization for Deterministic Models	279
8.5	Noise-driven Synchronization for Stochastic Models Without Coupling	283
8.6	A General Multicellular Network for Stochastic Models with Coupling	286
8.6.1	A Model	286
8.6.2	Example of a Gene Regulatory Network	288
8.6.3	Theoretical Analysis	294
8.6.4	Algorithm for Stochastic Simulation	299
8.6.5	Numerical Simulation	300
8.7	Deterministic Synchronization of Genetic Networks in Lur'e Form	303
8.8	Stochastic Synchronization of Genetic Networks in Lur'e Form	311
8.9	Transient Resetting for Synchronization Without Coupling . . .	317
