

Contents

1	Dynamical Models and Structural Properties	1
1.1	Modeling Assumptions	2
1.2	State Space Models	5
1.3	Steady-state Operating Conditions with Sinusoidal Voltages	16
1.3.1	Power Loss Minimization	19
1.3.2	Field Weakening	20
1.3.3	Torque–Speed Characteristics	21
1.4	Inverse System and Tracking Dynamics	35
1.5	Observability	41
1.6	Parameter Identifiability	46
1.6.1	Load Torque Identifiability	46
1.6.2	Rotor Resistance Identifiability	48
1.7	Feedback Linearizability	51
1.8	Experimental Set-up	55
1.9	Conclusions	58
	Problems	59
2	State Feedback Control	63
2.1	Stability Analysis of Feedforward Control	64
2.2	Direct Field-oriented Control	73
2.3	Indirect Field-oriented Control	83
2.4	Input–Output Feedback Linearizing Control	93
2.5	Adaptive Input–Output Feedback Linearizing Control	101
2.6	Dynamic Feedback Linearizing Control	109
2.7	Global Control with Arbitrary Rate of Convergence	118
2.8	Experimental Results	124
2.9	Conclusions	126
	Problems	129

3	Flux Observers and Parameter Estimation	133
3.1	Nonadaptive Observers	133
3.1.1	Open-loop Rotor Flux Observer	133
3.1.2	Open-loop Rotor Current Observer	136
3.1.3	Rotor Flux Observer with Arbitrary Rate of Convergence	139
3.2	Adaptive Flux Observer with Rotor Resistance Estimator	144
3.3	Two Load Torque Estimators	157
3.4	Experimental Results	162
3.5	Conclusions	163
	Problems	165
4	Output Feedback Control	171
4.1	Generalized Indirect Field-oriented Control	171
4.2	Observer-based Control	177
4.3	Adaptive Observer-based Control with Uncertain Load Torque	187
4.4	Adaptive Control with Uncertain Load Torque and Rotor Resistance	197
4.4.1	Observer-based Control	199
4.4.2	Global Control	202
4.5	Experimental Results	218
4.6	Conclusions	220
	Problems	223
5	Speed-sensorless Feedback Control	229
5.1	PI Control from Stator Current Errors	230
5.2	Global Control with Flux Measurements	236
5.3	Adaptive Control with Flux Measurements	244
5.4	Adaptive Control with Uncertain Load Torque	260
5.5	Adaptive Control with Uncertain Load Torque and Rotor Resistance	276
5.6	Conclusions	286
	Problems	289
6	Conclusions	293
A	Lyapunov Stability	299
B	Nonlinear Control Theory	311
	Bibliographical Notes	331
	References	335
	Index	347

Induction Motor Control Design

Marino, R.; Tomei, P.; Verrelli, C.M.

2010, XX, 351 p., Hardcover

ISBN: 978-1-84996-283-4
