| | | |
|----------|--|-----------|
| 1 | Multi-state Systems in Nature and in Engineering..... | 1 |
| 1.1 | Multi-state Systems in the Real World: General Concepts..... | 1 |
| 1.2 | Main Definitions and Properties | 8 |
| 1.2.1 | Generic Multi-state System Model..... | 8 |
| 1.2.2 | Main Properties of Multi-state Systems | 13 |
| 1.3 | Multi-state System Reliability and Its Measures | 16 |
| 1.3.1 | Acceptable and Unacceptable States. Failure Criteria..... | 16 |
| 1.3.2 | Relevancy and Coherency in Multi-state System Reliability Context | 17 |
| 1.3.3 | Multi-state Systems Reliability Measures | 18 |
| | References..... | 27 |
| 2 | Modern Stochastic Process Methods for Multi-state System Reliability Assessment | 29 |
| 2.1 | General Concepts of Stochastic Process Theory..... | 30 |
| 2.2 | Markov Models: Discrete-time Markov Chains | 34 |
| 2.2.1 | Basic Definitions and Properties | 34 |
| 2.2.2 | Computation of n -step Transition Probabilities and State Probabilities..... | 36 |
| 2.3 | Markov Models: Continuous-time Markov Chains | 40 |
| 2.3.1 | Basic Definitions and Properties | 40 |
| 2.3.2 | Markov Models for the Evaluating Reliability of Multi-state Elements..... | 48 |
| 2.3.3 | Markov Models for Evaluating the Reliability of Multi-state Systems | 66 |
| 2.4 | Markov Reward Models | 79 |
| 2.4.1 | Basic Definition and Model Description..... | 79 |
| 2.4.2 | Computation of Multi-state System Reliability Measures Using Markov Reward Models..... | 84 |
| 2.5 | Semi-Markov Models | 99 |
| 2.5.1 | Embedded Markov Chain and Definition of Semi-Markov Process..... | 100 |

| | |
|--|------------|
| 2.5.2 Evaluation of Reliability Indices Based on Semi-Markov Processes | 105 |
| References | 113 |
| 3 Statistical Analysis of Reliability Data for Multi-state Systems | 117 |
| 3.1 Basic Concepts of Statistical Estimation Theory | 117 |
| 3.1.1 Properties of Estimators | 118 |
| 3.1.2 Main Estimation Methods | 120 |
| 3.2 Classical Parametric Estimation for Binary-state System..... | 127 |
| 3.2.1 Basic Considerations | 127 |
| 3.2.2 Exponential Distribution Point Estimation..... | 128 |
| 3.2.3 Interval Estimation for Exponential Distribution | 131 |
| 3.3 Estimation of Transition Intensities for via Output Performance Observations | 132 |
| 3.3.1 Multi-state Markov Model and Observed Reliability Data. Problem Formulation | 132 |
| 3.3.2 Method Description..... | 135 |
| 3.3.3 Algorithm for Point Estimation of Transition Intensities for Multi-state Systems | 138 |
| 3.3.4 Interval Estimation of Transition Intensities for Multi-state System..... | 139 |
| References | 142 |
| 4 Universal Generating Function Method | 143 |
| 4.1 Mathematical Fundamentals | 143 |
| 4.1.1 Generating Functions | 144 |
| 4.1.2 Moment Generating Functions and the z -transform..... | 148 |
| 4.1.3 Universal Generating Operator and Universal Generating Function | 152 |
| 4.1.4 Generalized Universal Generating Operator | 155 |
| 4.1.5 Universal Generating Function Associated with Stochastic Processes | 158 |
| 4.2 Universal Generating Function Technique | 159 |
| 4.2.1 Like-term Collection and Recursive Procedure..... | 159 |
| 4.2.2 Evaluating Multi-state System Reliability Indices Using Universal Generating Functions | 162 |
| 4.2.3 Properties of Composition Operators | 167 |
| 4.2.4 Universal Generating Function of Subsystems with Elements Connected in Series..... | 170 |
| 4.2.5 Universal Generating Function of Subsystems with Elements Connected in Parallel | 172 |
| 4.2.6 Universal Generating Function of Series-parallel Systems | 175 |
| 4.2.6 Universal Generating Function of Systems with Bridge Structure | 178 |

| | |
|--|------------|
| 4.3 Importance and Sensitivity Analysis Using Universal Generating Function | 183 |
| 4.4 Estimating Boundary Points for Continuous-state System Reliability Measures | 188 |
| 4.4.1 Discrete Approximation | 189 |
| 4.4.2 Boundary Point Estimation | 193 |
| References..... | 198 |
| 5 Combined Universal Generating Function and Stochastic Process Method..... | 201 |
| 5.1 Method Description | 202 |
| 5.1.1 Performance Stochastic Process for Multi-state Element..... | 202 |
| 5.1.2 Multi-state System Reliability Evaluation..... | 207 |
| 5.2 Redundancy Analysis for Multi-state Systems | 214 |
| 5.2.1 Introduction | 214 |
| 5.2.2 Problem Formulation..... | 216 |
| 5.2.3 Model Description..... | 218 |
| 5.2.4 Algorithm for Universal Generating Function Computation for Entire Multi-state System..... | 226 |
| 5.2.5 Reliability Measures Computation for Entire Multi-state System.. | 228 |
| 5.3 Case Studies..... | 228 |
| References..... | 234 |
| 6 Reliability-associated Cost Assessment and Management Decisions for Multi-state Systems | 237 |
| 6.1 Basic Life Cycle Cost Concept | 238 |
| 6.2 Reliability-associated Cost and Practical Cost-reliability Analysis | 242 |
| 6.2.1 Case Study 1: Air Conditioning System..... | 243 |
| 6.2.2 Case Study 2: Feed Water Pumps for Power Generating Unit..... | 257 |
| 6.3 Practical Cost-reliability Optimization Problems for Multi-state Systems..... | 265 |
| 6.3.1 Multi-state System Structure Optimization | 265 |
| 6.3.2 Single-stage Expansion of Multi-state Systems | 270 |
| References..... | 272 |
| 7 Aging Multi-state Systems | 273 |
| 7.1 Markov Model and Markov Reward Model for Increasing Failure Rate Function | 273 |
| 7.1.1 Case Study: Multi-state Power Generating Unit | 275 |
| 7.2 Numerical Methods for Reliability Computation for Aging Multi-state System | 281 |
| 7.2.1 Bound Approximation of Increasing Failure Rate Function | 283 |
| 7.2.2 Availability Bounds for Increasing Failure Rate Function..... | 285 |

| | |
|--|------------|
| 7.2.3 Total Expected Reward Bounds for Increasing Failure Rate Function | 287 |
| 7.3 Reliability-associated Cost Assessment for Aging Multi-state System ... | 291 |
| 7.3.1 Case Study: Maintenance Investigation for Aging Air Conditioning System | 293 |
| 7.4 Optimal Corrective Maintenance Contract Planning for Aging Multi-state System | 299 |
| 7.4.1 Algorithm for Availability and Total Expected Cost Bound Estimation | 301 |
| 7.4.2 Optimization Technique Using Genetic Algorithms | 302 |
| 7.4.3 Case Study: Optimal Corrective Maintenance Contract for Aging Air Conditioning System..... | 303 |
| 7.5 Optimal Preventive Replacement Policy for Aging Multi-state Systems..... | 310 |
| 7.5.1 Problem Formulation..... | 311 |
| 7.5.2 Implementing the Genetic Algorithm..... | 313 |
| 7.5.3 Case Study: Optimal Preventive Maintenance for Aging Water Desalination System..... | 315 |
| References | 318 |
| 8 Fuzzy Multi-state System: General Definition and Reliability Assessment | 321 |
| 8.1 Introduction | 321 |
| 8.2 Key Definitions and Concepts of a Fuzzy Multi-state System | 323 |
| 8.3 Reliability Evaluation of Fuzzy Multi-state Systems..... | 336 |
| 8.3.1 Fuzzy Universal Generating Functions: Definitions and Properties | 336 |
| 8.3.2 Availability Assessment for Fuzzy Multi-state Systems | 337 |
| 8.3.3 Fuzzy Universal Generating Function for Series-parallel Fuzzy Multi-state Systems | 338 |
| 8.3.4 Illustrative Examples..... | 343 |
| References | 346 |
| Appendix A Heuristic Algorithms as a General Optimization Technique ... | 347 |
| A.1 Introduction..... | 347 |
| A.2 Parameter Determination Problems | 355 |
| A.3 Partition and Allocation Problems | 356 |
| A.4 Mixed Partition and Parameter Determination Problems..... | 359 |
| A.5 Sequencing Problems..... | 360 |
| A.6 Determination of Solution Fitness | 362 |
| A.7 Basic Genetic Algorithm Procedures and Reliability Application..... | 364 |
| References | 365 |

| | |
|---|----------------|
| Appendix B Parameter Estimation and Hypothesis Testing for Non-homogeneous Poisson Process | 367 |
| B.1 Homogeneous Poisson Process | 367 |
| B.2 Non-homogeneous Poisson Process | 368 |
| B.2.1 General Description of Non-homogeneous Poisson Process | 368 |
| B.2.2 Hypothesis Testing | 370 |
| B.2.3 Computer-intensive Procedure for Testing the Non-homogeneous Poisson Process Hypothesis | 372 |
| References..... | 375 |
| Appendix C MATLAB® Codes for Examples and Case Study Calculation | 377 |
| C.1 Using MATLAB® ODE Solvers | 377 |
| C.2 MATLAB® Code for Example 2.2..... | 377 |
| C.3 MATLAB® Code for Example 2.3..... | 378 |
| C.4 MATLAB® Code for Example 2.4..... | 379 |
| C.5 MATLAB® Code for Air Conditioning System (Case Study 6.2.1) | 381 |
| C.5.1 Calculating Average Availability | 381 |
| C.5.2 Calculating Total Number of System Failures..... | 383 |
| C.5.3 Calculating Mean Time to System Failure | 384 |
| C.5.4 Calculating Probability of Failure-free Operation | 386 |
| C.6 MATLAB® Code for Multi-state Power Generation Unit (Case Study 7.1.1)..... | 387 |
| C.6.1 Calculating Average Availability | 387 |
| C.6.2 Calculating Total Number of System Failures..... | 388 |
| C.6.3 Calculating Reliability Function..... | 388 |
| References | 389 |
