

Contents

1	Introduction	1
1.1	Motivation	1
1.1.1	Sewer Networks as Complex Systems	2
1.1.2	Model Predictive Control	4
1.1.3	Fault-tolerant Control	6
1.2	Main Objectives of the Book	6
1.3	Outline of the Book	7

Part I Background and Case Study Modelling

2	Background	15
2.1	Sewer Networks: Definitions and Real-time Control	15
2.1.1	Description and Main Concepts	15
2.1.2	RTC of Sewage Systems	22
2.2	MPC and Hybrid Systems	26
2.2.1	MPC Strategy Description	26
2.2.2	Hybrid Systems	29
2.2.3	MPC Problem and Hybrid Systems	30
2.3	Fault-tolerance Mechanisms	32
2.3.1	Fault Tolerance by Adapting the Control Strategy	33
2.3.2	Fault Tolerance by Repositioning Sensors and/or Actuators	38
2.4	Summary	40
3	Principles of the Mathematical Modelling of Sewer Networks	41
3.1	Fundamentals of the Mathematical Model	41
3.1.1	Virtual and Real Tanks	43
3.1.2	Manipulated Gates	44
3.1.3	Weirs (Nodes) and Sewage Pipes	45
3.2	Calibration of Model Parameters	46
3.3	Description of the Case Study	48

3.3.1	Barcelona's Sewer Network	48
3.3.2	Barcelona Test Catchment	50
3.3.3	Rain Episodes	55
3.4	Summary	56

Part II Model Predictive Control of Sewer Networks

4	Formulating the Model Predictive Control Problem	61
4.1	General Considerations	61
4.2	Control Problem Formulation	63
4.2.1	Control Objectives	64
4.2.2	Cost Function Formulation	64
4.2.3	Control Problem Constraints	66
4.3	Multi-objective Optimisation	66
4.4	Closed-loop System Configuration	69
4.4.1	Model Definition	69
4.4.2	Simulation of Scenarios	70
4.4.3	Criteria for Comparison	72
4.5	Discussion of the Results	73
4.6	Summary	77
5	MPC Problem Formulation and Hybrid Systems	79
5.1	Hybrid Modelling Methodology	80
5.1.1	Virtual Tanks (VT)	80
5.1.2	Real Tanks with Input Gates (RTIG)	82
5.1.3	Redirection Gates (RG)	87
5.1.4	Sewage Pipes (SP)	91
5.1.5	The Entire MLD Catchment Model	92
5.2	Predictive Control Strategy	95
5.2.1	Control Objectives	95
5.2.2	Cost Function	95
5.2.3	Problem Constraints	96
5.2.4	MIPC Problem	96
5.3	Simulation and Results	97
5.3.1	Preliminaries	97
5.3.2	MLD Model Descriptions and Controller Set-up	98
5.3.3	Performance Improvement	101
5.4	Summary	102
6	Suboptimal Hybrid Model Predictive Control	105
6.1	Motivation	105
6.2	General Aspects	109
6.2.1	Phase Transitions in MIP Problems	109
6.2.2	Strategies to Deal with the Complexity of HMPC	111
6.3	HMPC Incorporating Mode Sequence Constraints	112
6.3.1	Description of the Approach	112

6.3.2	Practical Issues	117
6.4	Suboptimal HMPC Strategy for Sewer Networks	120
6.4.1	Suboptimal Strategy Set-up	120
6.4.2	Simulation of Scenarios	121
6.4.3	Main Results	122
6.5	Suboptimal MPC Approach Based on Piecewise Linear Functions	125
6.5.1	PWLF Modelling Approach	127
6.5.2	Simulations and Results	130
6.6	Summary	134

Part III Fault-tolerance Capabilities of Model Predictive Control

7	Model Predictive Control and Fault Tolerance	139
7.1	General Aspects	139
7.2	Fault-tolerant Control and Hybrid Systems	141
7.3	Fault-tolerance Capabilities of MPC	143
7.3.1	Implicit Capabilities	143
7.3.2	Explicit Capabilities	145
7.4	Including Fault Tolerance in HMPC	145
7.4.1	Implicit Fault-tolerant HMPC	146
7.4.2	Explicit Fault-tolerant HMPC	149
7.4.3	An Illustrative Example	150
7.5	Some FTHMPC Implementation Schemes	153
7.6	Fault-tolerant HMPC of Sewer Networks	155
7.6.1	Fault Scenarios	155
7.6.2	Linear Plant Models and Actuator Faults	157
7.6.3	Hybrid Modelling and Actuator Faults	157
7.6.4	Implementation and Results	160
7.7	Summary	164
8	Fault-tolerance Evaluation of Actuator Fault Configurations	167
8.1	Introduction	167
8.2	Preliminary Definitions	168
8.3	Admissibility Evaluation Approaches	170
8.3.1	Admissibility Evaluation Using Constraint Satisfaction	170
8.3.2	Admissibility Evaluation Using Set Computation	175
8.4	Actuator Fault Tolerance Evaluation in Sewer Networks	182
8.4.1	System Description	182
8.4.2	Control Objectives and Admissibility Criterion	185
8.4.3	Main Results	186
8.5	Summary	187

Part IV Concluding Remarks

9	Concluding Remarks	195
9.1	Final Discussion	195
9.2	Possible Directions for Future Research	198
	References	201
	Index	213
