5.5	Combined Computer and Actuation Systems	87
	References	89
6	CPM using BSV	91
6.1	Background	91
6.2	Combined System CPM	92
6.3	Combined System CPM Results	97
6.4	CPM: System A	98
6.5	CPM: System B	108

6.6 Comparison of System A and System B 113

6.7 Comments on CPM 116

7 Binary Decision Diagrams 117

7.1 Overview 117

7.1.1 Shannon Decomposition Theorem 118

7.1.2 Example 118

7.1.3 Reduction Rules 119

7.1.4 *if-then-else* (ite) Function 120

7.1.5 BDD-Based *k*-out-of-*n*:G for PFC and IFC Systems 120

7.2 BDDs for *k*-out-of-*n*:G Systems 123

7.3 BDD Comments and Observations 126

References 126

8 FCASE Introduction 127

8.1 Background 127

8.2 Simple System Example 128

8.2.1 FCASE Input File Description 129

8.2.2 FCASE Output File Description 135

8.3 FCASE 1-out-of-4:G PFC and IFC Examples 140

8.3.1 Simple 1-out-of-4:G System FCASE Code and
Results 140

8.4 FCASE Fly-by-Wire Systems A and B 144

8.4.1 FCASE Results for System A 145

8.4.2 FCASE Results for System B 146

8.5 System B with Actuators in Series 148

References 150

9 Digital Fly-by-Wire System 151

9.0.1 Quad-Channel DFBW System Description 151

9.1 FCASE Output File for Quad DFBW System 156

9.2 Results for Quad DFBW System 165

9.3 FCASE Output File for Triplex System 166

10 Limits on Achievable Reliability 177

10.1 Introduction 177

10.2 IFC Models for i.i.d. *k*-out-of-*n*:G Systems 178

10.3 Optimum Reliability for IFC 1-out-of-*n*:G Systems 179

10.3.1 Optimum ELC 1-out-of-*n*:G Systems 179

10.3.2 Optimum FLC 1-out-of-*n*:G Systems 179

10.4 Comparison of Optimum ELC and FLC Systems 182
