

# Contents

<b>1</b>	<b>Homotopy Theory</b>	1
1.1	The Spatial Homology Truncation Machine	1
1.2	Compression Rigidity Obstruction Theory	52
1.3	Case Studies of Compression Rigid Categories	59
1.4	Truncation of Homotopy Equivalences	61
1.5	Truncation of Inclusions	62
1.6	Iterated Truncation	63
1.7	Localization at Odd Primes	64
1.8	Summary	70
1.9	The Interleaf Category	70
1.10	Continuity Properties of Homology Truncation	85
1.11	Fiberwise Homology Truncation	99
1.12	Remarks on Perverse Links and Basic Sets	105
<b>2</b>	<b>Intersection Spaces</b>	107
2.1	Reflective Algebra	107
2.2	The Intersection Space in the Isolated Singularities Case	112
2.3	Independence of Choices of the Intersection Space Homology	127
2.4	The Homotopy Type of Intersection Spaces for Interleaf Links	132
2.5	The Middle Dimension	135
2.6	Cap Products for Middle Perversities	149
2.7	L-Theory	165
2.8	Intersection Vector Bundles and K-Theory	173
2.9	Beyond Isolated Singularities	176
<b>3</b>	<b>String Theory</b>	191
3.1	Introduction	191
3.2	The Topology of 3-Cycles in 6-Manifolds	192
3.3	The Conifold Transition	193
3.4	Breakdown of the Low Energy Effective Field Theory Near a Singularity	193
3.5	Massless D-Branes	194
3.6	Cohomology and Massless States	195

3.7 The Homology of Intersection Spaces and Massless D-Branes .....196

3.8 Mirror Symmetry .....204

3.9 An Example .....208

**References.....211**
