

Contents

1	Preview and Introduction	1
1.1	Process of Communication	1
1.2	General Definition of Signal	3
1.3	Time-Value Definition of Signals–Analog and Digital	6
1.3.1	Continuous Time Continuous Valued Signal	7
1.3.2	Discrete Time Continuous Valued Signal	7
1.3.3	Discrete Time Discrete Valued Signal	7
1.4	Analog and Digital Communication Systems	8
1.5	Elements of Digital Communication System	10
1.6	MATLAB Programs	11
1.6.1	Time and Frequency Domain Representation of Signals	11
1.6.2	CTSV, DTCV, DTDV Signals	12
	References	13
2	Waveform Encoding	15
2.1	Introduction	15
2.2	Pulse Code Modulation (PCM)	15
2.2.1	Process of Sampling	16
2.2.2	Process of Quantization	22
2.2.3	PCM Transmitter and Receiver	24
2.2.4	Quantization Error	27
2.2.5	Signal to Noise Ratio (SNR) for Quantized Pulses	29
2.2.6	Non-uniform Quantization: Companding	30
2.3	Differential Pulse Code Modulation (DPCM)	35
2.3.1	Cumulative Error in PCM	35
2.3.2	Prevention of Cumulative Error by Applying Feedback	36
2.3.3	How We Can Predict the Future?	38
2.3.4	Analysis of DPCM	40
2.4	Delta Modulation	41
2.4.1	Drawbacks of Delta Modulation	43
2.5	Adaptive Delta Modulation	44
2.5.1	Song Algorithm	44
2.5.2	Space-Shuttle Algorithm	46

2.6	Sigma-Delta Modulation (SDM)	47
2.6.1	Noise Performance	48
2.7	Linear Predictive Coder (LPC)	49
2.7.1	Concept	49
2.7.2	Genetic Algorithm Based Approach	50
2.8	MATLAB Programs	53
2.8.1	Aliasing	53
	References	54
3	Digital Baseband Signal Receivers	55
3.1	Introduction	55
3.2	Integrate and Dump Type Filter	56
3.2.1	Noise Power and Variance	59
3.2.2	Figure of Merit	61
3.2.3	Probability of Error	61
3.3	The Optimum Filter	63
3.4	The Matched Filter	67
3.4.1	Impulse Response	67
3.4.2	Probability of Error	67
3.4.3	Properties of Matched Filter	70
3.5	The Correlator	72
3.6	Simulink Communication Block Set Example	74
	References	75
4	Digital Baseband Signal Transmitter	77
4.1	Introduction	77
4.2	Elements of Digital Baseband Communication System	77
4.2.1	Formatting	78
4.2.2	Regenerative Repeater	78
4.3	Properties and Choice of Digital Formats	80
4.4	Line Coding	81
4.5	Power Spectrum Density of Different Digital Formats	83
4.5.1	Unipolar-NRZ	86
4.5.2	Unipolar-RZ	87
4.5.3	Polar-NRZ	88
4.5.4	Polar-RZ	89
4.5.5	Bipolar-NRZ	90
4.5.6	Split-Phase (Manchester)	91
	References	93
5	Equalization	95
5.1	Inter-Symbol Interference (ISI)	95
5.2	Nyquist Criterion for Distortion Less Transmission (Zero ISI)	97
5.2.1	Criteria in Frequency Domain	98
5.2.2	Concept of Ideal Nyquist Channel	100
5.2.3	Limitations of Ideal Solution: Raised Cosine Spectrum	101

5.3	Eye Pattern	103
5.3.1	Information Obtained from Eye Pattern	104
5.4	System Design for Known Channel	104
5.5	Linear Equalizer	106
5.5.1	Linear Transversal Filter	106
5.6	Adaptive Equalizer	108
	References	110
6	Digital Modulation Techniques	111
6.1	Introduction	111
6.2	Amplitude Shift Keying (ASK)	112
6.2.1	Mathematical Model	113
6.2.2	ASK Modulator	115
6.2.3	Binary ASK Demodulator	117
6.3	Frequency Shift Keying (FSK)	118
6.3.1	Mathematical Model	118
6.3.2	BFSK Modulator	119
6.3.3	FSK Demodulator	121
6.4	Binary Phase Shift Keying (BPSK)	122
6.4.1	Mathematical Model	123
6.4.2	BPSK Modulator	124
6.4.3	BPSK Demodulator	125
6.5	Differential Phase Shift Keying (DPSK)	125
6.5.1	DPSK Modulator	125
6.5.2	DPSK Demodulator	127
6.6	Quadrature Phase Shift Keying (QPSK)	127
6.6.1	Mathematical Model	127
6.6.2	QPSK Modulator	131
6.6.3	QPSK Demodulator	131
6.6.4	Offset QPSK (OQPSK)	132
6.7	Minimum Shift Keying (MSK)	134
6.8	Probability of Error for Different Modulation Schemes	136
6.8.1	Probability of Error in ASK	136
6.8.2	Probability of Error in FSK	137
6.8.3	Probability of Error in PSK	138
6.9	MATLAB Programs	139
6.9.1	QPSK Waveform	139
6.9.2	MSK Waveform	140
	References	141
7	Spread Spectrum Modulation	143
7.1	Introduction	143
7.2	Processing Gain	144
7.3	Pseudo-Noise (PN) Sequence	145
7.3.1	Concept: A Hypothetical Experiment	145
7.3.2	Generation of PN Sequence	146

7.3.3	Properties of PN Sequence	147
7.4	Direct Sequence Spread Spectrum (DSSS)	149
7.4.1	Concept	149
7.4.2	DSSS with Coherent BPSK	151
7.4.3	Probability of Error Calculation	152
7.5	Frequency-Hopped Spread Spectrum	155
7.5.1	Concept	155
7.5.2	FHSS with FSK	157
7.5.3	Rate of Hopping: Fast and Slow	159
7.6	Application of Spread Spectrum	159
7.6.1	GPS (Global Positioning System)	159
7.7	CDMA (Code Division Multiple Access)	163
7.7.1	Orthogonal Chip Sequence	163
7.7.2	Gold Sequence	165
7.7.3	Principle of Operation	166
	References	166
8	Information Theory	169
8.1	Introduction	169
8.2	Entropy	171
8.3	Rate of Information	173
8.4	Information Sources	173
8.5	Discrete Memoryless Channel (DMC)	176
8.5.1	Channel Representation	176
8.5.2	The Channel Matrix	176
8.6	Special Channels	177
8.6.1	Lossless Channel	177
8.6.2	Deterministic Channel	178
8.6.3	Noise-Less Channel	179
8.6.4	Binary Symmetric Channel (BSC)	179
8.7	Mutual Information	182
8.8	Channel Capacity	183
8.8.1	Gaussian Channel: Shanon-Hartley Theorem	183
8.9	Entropy Coding	185
8.9.1	Shanon-Fano Coding	186
8.9.2	Huffman Coding	187
8.10	MATLAB Code	188
8.10.1	Convergence of P_e in Cascaded BSC	188
	References	189
9	Error Control Coding	191
9.1	Introduction	191
9.2	Scope of Coding	192
9.3	Linear Block Code	193
9.3.1	Coding Technique Using Generator Matrix	193
9.3.2	Syndrome Decoding	195

9.4	Convolutional Code	196
9.4.1	Encoder	196
9.4.2	State Diagram	199
9.4.3	Code Tree	200
9.4.4	Trellis Diagram	200
9.4.5	Decoding of Convolutional Code by Viterbi	202
9.5	Cyclic Code	204
9.5.1	Concept and Properties	204
9.5.2	Encoder and Decoder	206
9.5.3	Meggitt Decoder	207
9.6	BCH Code	207
9.6.1	Simplified BCH Codes	208
9.6.2	General BCH Codes	210
9.6.3	Properties	210
	References	211
	Appendix A: Elementary Probability Theory	213
	Appendix B: Convolution and Correlation – Some Case Studies	225
	Appendix C: Frequently Used MATLAB Functions	237
	Index	245
