

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	What Is Dense Matter?	1
1.2	What Is a Compact Star?	3
1.3	Further Reading	5
	References	5
<b>2</b>	<b>Mass and Radius of the Star</b>	7
2.1	Noninteracting Nuclear Matter	9
2.2	Noninteracting Quark Matter	15
2.2.1	Strange Quark Matter Hypothesis	16
2.2.2	Equation of State	21
2.3	Mass-Radius Relation Including Interactions	23
	Problems	26
	References	27
<b>3</b>	<b>Basic Models and Properties of Dense Nuclear Matter</b>	29
3.1	The Walecka Model	30
3.1.1	Including Scalar Interactions	38
3.2	Hyperons	40
3.3	Kaon Condensation	43
3.3.1	Chiral Symmetry of QCD	43
3.3.2	Chiral Lagrangian	46
3.3.3	Kaon-Nucleon Matter	48
3.4	From Hadronic to Quark Phases: Possibility of a Mixed Phase	55
	Problems	58
	References	59
<b>4</b>	<b>Superconductivity and Superfluidity in a Compact Star</b>	61
4.1	Specific Heat for Isotropic and Anisotropic Superconductors	63
4.2	Color-Flavor Locked (CFL) Quark Matter	68
4.2.1	Kaon Condensation in CFL Quark Matter	74

4.3	Color-Superconducting Gap from QCD	84
	Problems	93
	References	93
<b>5</b>	<b>Neutrino Emissivity and Cooling of the Star</b>	<b>95</b>
5.1	Urca Processes in Nuclear Matter	96
5.2	Direct Urca Process in Quark Matter	98
5.2.1	W-Boson Polarization Tensor	102
5.2.2	Effect of Superconductivity on Urca Process	105
5.2.3	Result for Unpaired Quark Matter	107
5.3	Cooling with Quark Direct Urca Process	109
	Problems	111
	References	111
<b>6</b>	<b>Discussion</b>	<b>113</b>
6.1	What We Have Discussed	113
6.2	What We Could Have, But Haven't, Discussed	114
	References	121
<b>A</b>	<b>Basics of Quantum Field Theory at Finite Temperature and Chemical Potential</b>	<b>123</b>
A.1	Bosonic Field	123
A.1.1	Summation Over Bosonic Matsubara Frequencies	129
A.2	Fermionic Field	131
A.2.1	Summation Over Fermionic Matsubara Frequencies	135
	Problems	136
	<b>Glossary</b>	<b>137</b>
	<b>Index</b>	<b>145</b>

Dense Matter in Compact Stars

A Pedagogical Introduction

Schmitt, A.

2010, X, 147 p. 23 illus., Softcover

ISBN: 978-3-642-12865-3
