1	Skeletal Structures	1
	Overview	1
	The Model	1
	Introduction	1
	Bones	2
	Cartilage	4
	Tendons and Ligaments	4
	Articulations	5
	Mobility	8
	Artificial Joints	11
	The Hand	12
	The Spinal Column	14
	The Spinal Disk	18
	Notes	20
	Summary	21
	Glossary	22
	References	25
	Further Reading	26
2	Muscles	27
	Overview	27
	The Model	27
	Introduction	27
	Muscle Architecture	28
	Agonist-Antagonist, Co-contraction	28
	Components of Muscle	29
	Muscle Contraction	32
	Relation Between Muscle Length and Tension	33
	The “Motor Unit”	35
	Muscle Twitch	36
	Muscle Fatigue	36
	Activities of Entire Muscles	38
	Control of Muscle	38
	Muscle Fiber Types	39

Strength of Muscle and Body Segment	39
Muscle Strength	41
Internal Transmission	41
Body (Segment) Strength	42
Exerting Strength with the Hand	43
Static and Dynamic Exertions	46
Static Strength	46
Dynamic Strength	47
Regulation of Strength Exertion	49
Feedforward	49
Feedback	51
Measuring Muscle Strength	51
The “Maximal Voluntary Effort”	51
Measurement Opportunities	52
Strength Measurement Devices	54
The Strength Test Protocol	54
Designing for Body Strength	56
Proper Statistical Use of Strength Data	57
Designing for Hand Strength	57
Using Tables of Exerted Torques and Forces	60
Designing for Foot Strength	61
Notes	67
Summary	68
Glossary	69
References	73
Further Reading	74
3 Neuromuscular Control	75
Overview	75
The Model	75
Introduction	75
Organization of the Nervous System	76
By Function	76
By Location	76
The Central Nervous System	77
Sensors and Effectors of the Peripheral Nervous System	78
The Nervous Pathways	81
The Neuron	82
Transmission of Nerve Signals	85
Control of Muscle	86
Ergonomic Engineering to Facilitate Control Actions	87
Notes	91
Summary	91
Glossary	92
References	96
Further Reading	96

4 Anthromechanics	97
Overview	97
The Model	97
Introduction	97
Stress and Strain	98
Mechanical Bases	99
Static Equilibrium	100
Dynamic Analyses	104
Anthropometric Inputs	105
Links and Joints	105
Body Volumes	106
Inertial Properties	110
Lean Body Mass	114
Locating the Center of Mass	114
Moments of Inertia	115
Kinematic Chain Models	115
Notes	118
Summary	119
Glossary	120
References	122
Further Reading	124
Journals: For Example	124
5 Respiration	125
Overview	125
The Model	125
Introduction	125
Architecture	126
Functions	128
Respiratory Volumes	129
Measurement Opportunities	130
Summary	130
Glossary	131
References and Further Reading	131
6 Circulation	133
Overview	133
The Model	133
Introduction	134
Body Fluids	134
Blood	134
Blood Groups	135
Functions	135
The Lymphatic System	136
The Circulatory System of the Blood	136
Architecture of the Circulatory System	136

The Heart as Pump	137
Cardiac Output	139
The Capillary Bed	140
Hemodynamics	143
Blood Vessels	143
Regulation of Circulation	145
Measurement Opportunities	146
Summary	146
Glossary	147
References and Further Reading	149
7 Metabolism	151
Overview	151
The Model: The “Human Energy Machine”	151
Introduction	152
Human Metabolism and Work	152
Energy Liberation in the Body	154
Energetic Reactions	155
The Pathways of Digestion	155
Energy Content of Nutrients	157
Absorption and Assimilation	160
Energy Release	161
Aerobic Metabolism of Glucose	161
Anaerobic Metabolism of Glucose	161
Metabolism of Carbohydrate	162
Metabolism of Fat and Protein	162
Energy Storage	163
Energy for Muscle Work	164
Release of Energy During a Strong Muscular Effort	165
Aerobic and Anaerobic Work	167
Energy Use and Body Weight	168
Notes	169
Summary	169
Glossary	170
References	171
Further Reading	171
8 Exercise and Work	173
Overview	173
The Model	173
Introduction	173
Capacity for Physical Exercise and Work	174
Diet and Weight Observation	174
Direct Calorimetry	175
Indirect Calorimetry	176

Standardized Tests	178
Bicycle, Treadmill and Step Tests	178
Challenges	179
Energy Requirements at Work	180
Procedures to Catalogue Metabolic Requirements	181
Techniques to Estimate Energy Requirements	184
Light or Heavy Jobs?	187
Overall Changes in Body Functions in Response to Work Loads	188
Fatigue	189
Human Engineering/Ergonomics	190
Notes	191
Summary	192
Appendix 1: Techniques of Indirect Calorimetry	193
Appendix 2: Rating the Perceived Effort	194
Borg RPE Scale	195
Borg CR-10 Scale	196
Glossary	196
References	197
Further Reading	198
9 Thermal Environment	199
Overview	199
The Model	199
Introduction	199
The Human Body as a Thermo-Regulated System	200
The Energy Balance	200
Energy Exchanges with the Environment	201
Radiation Heat Exchange	201
Conduction Heat Exchange	203
Convection Heat Exchange	203
Evaporation Heat Exchange	204
Heat Balance	205
Regulation and Sensation of Temperature	206
Achieving Thermal Homeostasis	207
Measuring Body Temperatures	208
Assessing the Thermal Environment	210
Ambient Temperature	210
Air Humidity	210
Air Movement	210
Radiant Heat	211
The Combined Effects of Climate Factors	211
Reactions of the Body to Hot Environments	212
Redistribution of Blood	212
Reduction of Muscle Activities	213

Indications of Heat Strain	213
Acclimatization to Heat	215
Reactions of the Body to Cold Environments	216
Redistribution of Blood	216
Increased Metabolic Heat Production	217
How Cold Does it Feel?	218
Indications of Cold Strain	219
Acclimatization to Cold	220
Working in Heat or Cold	221
Effects of Heat	221
Effects of Cold	223
Designing the Thermal Environment	225
Notes	228
Summary	228
Glossary	229
References	231
Further Reading	232
10 Body Rhythms and Work Schedules	233
Overview	233
The Model	233
Introduction	233
Menstrual Cycle	235
Circadian Rhythms	235
Models of Oscillatory Control	237
Individual Diurnal Performance Rhythms	238
Sleep	239
Sleep Phases	239
Sleep Loss and Tiredness	242
Normal Sleep Requirements	243
Sleep Deprivation and Prolonged Periods of Work	244
Performing Tasks	244
Incurring Performance Decrement and Recovering From It	245
Shift Work	245
The Development of Shift Work	246
Shift Systems	246
Flextime	249
Compressed Workweeks	249
Suitable Shift Systems	251
Health and Well-Being	252
Performance	253
Social Interactions	253
How to Select a Suitable Work System	254
Shift Length	256
Notes	258

Summary	259
Glossary	260
References	261
Further Reading	263
11 Engineering Anthropometry	265
Overview	265
The Model	265
Introduction	265
Measurement Techniques	266
Terminology and Standardization	266
Classical Measuring Techniques	267
New Measurement Methods	268
Body Typology	274
Anthropometric Data Sets	275
Normality	275
Variability	276
Correlations	279
Body Proportions	280
Variability of Anthropometric Data	283
Data Management	283
Secular Variations	285
Intra-individual Variations	287
Inter-individual Variations	287
Changing Populations	288
Available Body Size Data	292
How To Get Missing Data	292
Finding Data in the Literature	292
Conducting an Anthropometric Survey	295
Statistical Body Models	305
Deducing Unknown Values from Existing Data	306
Using Anthropometric Data in Design	310
The “Normative” Adult	310
Body Positions and Motions at Work	311
Designing to Fit the Body	313
Determining Tariffs	315
Determining the Workspace of the Hands	315
Human-Centered Engineering	315
Notes	318
Summary	321
Glossary	321
References	327
Further Reading	330
Index	331

Engineering Physiology

Bases of Human Factors Engineering/ Ergonomics

Kroemer, K.H.E.; Kroemer, H.J.; Kroemer-Elbert, K.E.

2010, XXIII, 338 p., Hardcover

ISBN: 978-3-642-12882-0
