Introduction	1
1 Basic Concepts	9
1.1 The Lagrangian Displacement of a Mass Element	9
1.2 Lagrangian and Eulerian Perturbations of Physical Quantities	12
1.2.1 Definitions	12
1.2.2 Additional Relations	15
1.3 The Eulerian Perturbation of a Velocity Component	17
1.4 Perturbations of Mass Density, Gravitational Potential, Pressure, and Temperature	18
1.4.1 Perturbations of Mass Density	18
1.4.2 Perturbations of Gravitational Potential	19
1.4.3 Perturbations of Pressure	22
1.4.4 Perturbations of Temperature	23
2 The Equations Governing Linear Perturbations in a Quasi-Static Star	25
2.1 System of Coordinates	25
2.2 Equation of Motion	26
2.3 Equilibrium State of a Quasi-Static Star	27
2.4 Eulerian Form of the Equations Governing Linear Perturbations	30
2.4.1 First Additional Equation	31
2.4.2 Second Additional Equation	32
2.4.3 Third Additional Equation	33
2.5 Lagrangian Form of the Equations Governing Linear Perturbations	34
3 Deviations from the Hydrostatic and Thermal Equilibrium in a Quasi-Static Star	37
3.1 Introduction	37
3.2 Resolution of the Force Acting upon a Moving Mass Element	37
3.3 The Dynamic Time-Scale of a Star	39

3.4	Energy Exchange Between Moving Mass Elements	41
3.5	Criterion for Local Stability with Respect to Convection	44
3.6	Deviations from the Thermal Equilibrium	50
4	Eigenvalue Problem of the Linear, Isentropic Normal Modes in a Quasi-Static Star	51
4.1	Time-Dependent Equations and Boundary Conditions	
	Governing Linear, Isentropic Oscillations	51
4.2	Vectorial Wave Equation with Tensorial Operator $\mathbf{U}$	52
4.3	Separation of Time	53
4.4	Inner Product of Linear, Isentropic Oscillations	55
4.5	Symmetry of the Tensorial Operator $\mathbf{U}$	56
	4.5.1 Proof of Kaniel and Kovetz	56
	4.5.2 Proof of Lynden-Bell and Ostriker	58
4.6	Orthogonality of the Linear, Isentropic Normal Modes	61
4.7	Global Translations of a Quasi-Static Star as Normal Linear, Isentropic Modes	62
4.8	Immovability of the Star's Mass Centre	64
5	Spheroidal and Toroidal Normal Modes	67
5.1	Introduction	67
5.2	Radial Component of the Vorticity Equation	67
5.3	Convenient Form of the Governing Equations	69
5.4	Helmholtz's Resolution Theorem for Vector Fields	70
5.5	Resolution of the Vector Field $\rho \xi$	73
5.6	Resolution of the Displacement Field into a Radial and a Horizontal Field	77
5.7	Expansion of the Displacement Field in Terms of Spherical Harmonics	80
5.8	Spheroidal Normal Modes	81
	5.8.1 Definition	81
	5.8.2 Eigenvalue Problem of the Spheroidal Normal Modes	82
	5.8.3 Divergence-Free Spheroidal Normal Modes	86
5.9	Toroidal Normal Modes	89
5.10	Inner Products of Normal Modes	94
	5.10.1 Inner Product of Two Spheroidal Modes	94
	5.10.2 Inner Product of Two Toroidal Modes	95
	5.10.3 Inner Product of a Spheroidal and a Toroidal Mode	95
6	Determination of Spheroidal Normal Modes: Mathematical Aspects	97
6.1	Introduction	97
6.2	Convenient Fourth-Order Systems of Differential Equations in the Radial Coordinate	97

6.2.1	Pekeris' System of Equations	97
6.2.2	Ledoux' System of Equations	99
6.2.3	Dziembowski's System of Equations	102
6.3	Determination of Radial Normal Modes	103
6.3.1	Admissible Solutions from the Boundary Point $r = 0$	104
6.3.2	Admissible Solutions from the Boundary Point $r = R$	106
6.3.3	Eigenvalue Equation	109
6.4	Determination of Non-Radial Spheroidal Normal Modes	109
6.4.1	Admissible Solutions from the Boundary Point $r = 0$	110
6.4.2	Admissible Solutions from the Boundary Point $r = R$	114
6.4.3	Eigenvalue Equation	118
7	The Eulerian Perturbation of the Gravitational Potential	121
7.1	As Solution of Poisson's Perturbed Differential Equation	121
7.2	Derivation from the General Integral Solution of Poisson's Equation	122
7.3	The Cowling Approximation	130
8	The Variational Principle of Hamilton	133
8.1	Introduction	133
8.2	First- and Second-Order Energy Variations	134
8.3	Equality of the Mean Kinetic and the Mean Potential Energy of Oscillation over a Period	138
8.4	First- and Second-Order Variational Principles	140
8.4.1	First-Order Variational Principle	140
8.4.2	Second-Order Variational Principle	141
8.4.3	Takata's Reformulation of the Second-Order Variational Principle	145
8.4.4	The Lagrangian Density of Tolstoy	146
8.5	Approximation Method of Rayleigh–Ritz	148
8.5.1	Convenient Form of the Lagrangian	148
8.5.2	The Approximation Method	150
8.6	Weight Functions for Spheroidal Normal Modes	152
8.7	Energy Density and Energy Flux	153
8.8	The Equations that Govern Linear, Isentropic Oscillations, as Canonical Equations	156
9	Radial Propagation of Waves	159
9.1	Introduction	159
9.2	Local Dispersion Equations	159
9.2.1	General Local Dispersion Equation	159

9.2.2	Local Dispersion Equation Applying to Surface Layers	161
9.3	Local Radial Propagation of Waves	163
9.3.1	Radial Propagation of Waves in an Incompressible Layer Subject to Gravity	163
9.3.2	Radial Propagation of Waves in a Compressible Layer not Subject to Gravity	166
9.3.3	Radial Propagation of Waves in a Compressible Layer with a Density Stratification that is Subject to Gravity	168
9.4	Global Representation of the Radial Propagation of Waves	171
10	Classification of the Spheroidal Normal Modes	177
10.1	Origin from Propagating Waves	177
10.2	The Radial Modes	178
10.3	Cowling's Classification of the Non-Radial Spheroidal Modes ...	181
10.3.1	The Non-Radial p - and g -Modes	181
10.3.2	The Non-Radial f -Modes	185
10.4	Validity of Cowling's Classification	186
10.4.1	The Equilibrium Sphere of Uniform Mass Density	186
10.4.2	Polytropic and Physical Models	197
10.5	Beyer's Study on the Nature of the Oscillation Spectra	201
10.5.1	System of Equations	201
10.5.2	The Radial Modes	202
10.5.3	The Non-Radial Modes	203
11	Classification of the Spheroidal Normal Modes (continued)	205
11.1	Additional Nodes for Models with a Larger Central Mass Condensation	205
11.2	Mode Bumping in Models with a Larger Central Mass Condensation	209
11.3	Theory of the Avoided Crossings of Modes	210
11.4	Implications of Avoided Crossings of Non-Radial Modes for Mode Identifications	218
11.5	Strange Radial Modes	221
11.6	The First-Degree f -Modes	226
12	Completeness of the Linear, Isentropic Normal Modes	229
12.1	Status Questionis	229
12.2	Approach of Eisenfeld	231
12.2.1	Eisenfeld's Operator T	231
12.2.2	Symmetry of the Operator T	233
12.2.3	Existence of a Non-Empty Resolvent Set for the Operator T ?	235
12.2.4	Eisenfeld's Conclusion	245

12.3	Lower Bound of the Tensorial Operator $\mathbf{U}$	245
12.3.1	Expression for the Lower Bound	245
12.3.2	Hunter's Derivation	247
12.3.3	Alternative Derivation	249
12.4	Spectral and Expansion Theorems	254
13	$N^2(r)$ Nowhere Negative as Condition for Non-Radial Modes with Real Eigenfrequencies	257
13.1	Introduction	257
13.2	$N^2(r)$ Nowhere Negative as Sufficient Condition	258
13.2.1	Chandrasekhar's Equation for the Eigenvalue of a Spheroidal Normal Mode	258
13.2.2	The Sufficient Condition	260
13.3	$N^2(r)$ Nowhere Negative as Necessary Condition	264
14	Asymptotic Representation of Low-Degree, Higher-Order p-Modes	267
14.1	State of the Art	267
14.2	Appropriate Equations	269
14.3	Two-Variable Expansions at Larger Distances from the Boundary Points	270
14.4	Boundary-Layer Expansions Near $r = 0$	277
14.5	Matching of the Boundary-Layer Expansions Valid Near $r = 0$..	281
14.6	Boundary-Layer Expansions Near $r = R$	284
14.7	Matching of the Boundary-Layer Expansions Valid Near $r = R$..	287
14.8	Eigenfrequency Equation	290
14.9	Condition on the Eulerian Perturbation of the Gravitational Potential at $r = R$	291
14.10	Uniformly Valid Asymptotic Expansions	292
14.11	Identification of the Radial Order of a p -Mode with a Given Eigenfrequency	294
14.11.1	Radial Modes	294
14.11.2	Non-Radial p -Modes	295
14.12	Concluding Remarks	297
15	Asymptotic Representation of Low-Degree and Intermediate-Degree p-Modes	301
15.1	Frequency Separations $D_{n,\ell}$ for Solar 5 Min-Oscillations	301
15.2	Appropriate Equation	305
15.3	Two-Variable Expansion at Larger Distances from the Turning Point and the Boundary Point $r = R$	307
15.4	Boundary-Layer Expansion on the Outer Side of the Turning Point	307
15.5	Two-Variable Expansion at Larger Distances from the Boundary Point $r = 0$ and the Turning Point	310

15.6	Boundary-Layer Expansion on the Inner Side of the Turning Point.....	311
15.7	Boundary-Layer Expansion Near the Boundary Point $r = R$	313
15.8	Eigenfrequency Equation.....	315
15.9	Uniformly Valid Asymptotic Representation of the Divergence of the Lagrangian Displacement	316
15.10	Application to the Compressible Equilibrium Sphere of Uniform Mass Density.....	317
15.11	Eigenfrequency Equation with the Method of the Phase Functions	322
16	Asymptotic Representation of Low-Degree, Higher-Order g^+-Modes in Stars Containing a Convective Core.....	327
16.1	Introduction	327
16.2	Appropriate Equations	327
16.3	Stars Consisting of a Convective Core and a Radiative Envelope ..	328
16.3.1	Two-Variable Solutions in the Radiative Envelope at Larger Distances from its Boundaries	328
16.3.2	Boundary-Layer Solutions on the Outer Side of the Boundary Between the Convective Core and the Radiative Envelope	333
16.3.3	Junction with the Solutions Valid in the Convective Core.....	337
16.3.4	Boundary-Layer Solutions Near the Boundary Point $r = R$	340
16.3.5	Eigenfrequency Equation	344
16.3.6	The Condition on the Eulerian Perturbation of the Gravitational Potential at $r = R$	346
16.3.7	Uniformly Valid Asymptotic Solutions	347
16.3.8	Identification of the Radial Order of a g^+ -Mode with a given Eigenfrequency.....	349
16.4	Stars Consisting of a Convective Core, an Intermediate Radiative Zone, and a Convective Envelope	352
16.4.1	Boundary-Layer Solutions on the Inner Side of the Boundary Between the Intermediate Radiative Zone and the Convective Envelope	352
16.4.2	Asymptotic Solutions in the Convective Envelope	354
16.4.3	Eigenfrequency Equation	362
16.4.4	The Condition on the Eulerian Perturbation of the Gravitational Potential at $r = R$	363
16.4.5	Uniformly Valid Asymptotic Solutions	364
16.4.6	Identification of the Radial Order of a g^+ -Mode with a Given Eigenfrequency	366

17	Asymptotic Representation of Low-Degree, Higher-Order g^+-Modes in Stars Consisting of a Radiative Core and a Convective Envelope	369
17.1	Introduction	369
17.2	Asymptotic Solutions in the Radiative Core	369
17.2.1	Two-Variable Solutions at Larger Distances from the Boundaries of the Radiative Core	369
17.2.2	Boundary-Layer Solutions Near the Boundary Point $r = 0$	370
17.2.3	Boundary-Layer Solutions on the Inner Side of the Boundary Between the Radiative Core and the Convective Envelope	374
17.3	Eigenfrequency Equation	376
17.4	The Condition on the Eulerian Perturbation of the Gravitational Potential at $r = R$	377
17.5	Uniformly Valid Asymptotic Solutions	378
17.6	Identification of the Radial Order of a g^+ -Mode	378
17.7	Global Conclusion from the Asymptotic Theory of Low-Degree, Higher-Order p - and g^+ -Modes	379
18	High-Degree, Low-Order Modes	383
18.1	Introduction	383
18.2	High-Degree, Low-Order p - and g^+ -Modes Trapped Near the Surface	383
18.3	High-Degree, Low-Order g^+ -Modes Trapped Near a Maximum of the Boundary of the G -Region	389
19	Period Changes in a Rapidly Evolving Pulsating Star	393
19.1	Introduction	393
19.2	Appropriate Equations	393
19.3	Two-Time-Variable Expansion Procedure	396
19.4	Rate of Change of an Isentropic Pulsation Period	400
19.5	Use of the Equality of the Mean Kinetic and the Mean Potential Energy of Pulsation	402
19.6	Explicit Expression for the Rate of Change of a Period in a Radially Pulsating Star	403
19.6.1	The First Part	404
19.6.2	The Second Part	404
19.6.3	The Third Part	407
19.6.4	Global Result	407
19.7	Rate of Change of a Period in a Radially Pulsating Star Subject to a Homologous Contraction or Expansion	408

Appendixes	411
A Green's Fundamental Formula of Potential Theory	411
B The Thermodynamic Isentropic Coefficients	415
B.1 Reversible Thermodynamic Processes	415
B.2 Thermodynamic Relations	415
B.3 Definitions of the Isentropic Coefficients	416
B.4 Equations for the Isentropic Coefficients	418
B.4.1 Equation for Γ_1	418
B.4.2 Equation for Γ_2	419
B.4.3 Equation for Γ_3	420
C Lagrange's Equations of Motion	421
D Spherical Harmonics	427
E Singular Perturbation Problems of the Boundary-Layer Type	429
F Boundary Condition Relative to the Pressure on a Star's Surface	433
G The Curl of a Vector Field	437
H Eigenvalue Problem of the Vibrating String	441
I The Euler–Lagrange Equations of Hamilton's Variational Principle for a Perturbed Star	445
J Acoustic Waves	447
J.1 Acoustic Waves in a Uniform Gas	447
J.2 Vertical Propagation of Acoustic Waves in a Plane Isothermal Layer	448
List of Symbols	451
References	455
Index	467
