1	Introduction	1
	References	4
2	Radar Systems	5
2.1	Radar Principle	5
2.2	Radar Equation and System Considerations	6
2.3	CW and Frequency-Modulated Radar	8
2.3.1	Doppler Radar	8
2.3.2	Frequency-Modulated Radar	9
2.3.2.1	Linear FM Continuous-Wave Radar	9
2.4	Angle Detection	11
2.5	Frequency Regulations	12
2.6	Receiver Architectures	14
2.6.1	Homodyne	14
2.6.2	Heterodyne	15
2.7	Status of Automotive Radar Systems	16
2.8	Technology Requirements for Radar Chipset	17
	References	17
3	CMOS and Bipolar Technologies	19
3.1	CMOS Technology	19
3.1.1	MOSFET Layout and Modeling Considerations	20
3.1.2	Devices Available in C11N	22
3.2	Bipolar Transistors	23
3.2.1	HBT Layout and Modeling Considerations	24
3.2.2	Devices Available in B7HF200	25
3.3	Technology Comparison	26
3.3.1	Transistor Performance	26
3.3.2	Metallization and Passive Components	29
	References	31

4	Modeling Techniques	33
4.1	Analytical Fitting of On-Chip Inductors	33
4.1.1	Series Branch Parameters Fitting	36
4.1.2	Shunt Branches Parameters Fitting	38
4.1.3	Results Verification	40
4.2	Transistor Finger Capacitance Estimation	42
	References	45
5	Measurement Techniques	47
5.1	S-parameter De-embedding Techniques	48
5.1.1	Extension of Thru Technique for De-embedding of Asymmetrical Error Networks	49
5.1.1.1	Theory	49
5.1.1.2	Result Verification	52
5.1.2	De-embedding of Differential Devices using cascade-based Two-Port Techniques	54
5.1.2.1	Theory	54
5.1.2.2	Result Verification	60
5.2	Differential Measurements using Baluns	63
5.2.1	Theoretical Analysis	64
5.2.1.1	Back-to-Back Measurement	65
5.2.1.2	DUT Measurement	67
5.2.1.3	Insertion Loss De-embedding Error	68
5.2.2	Measurement Verification	69
	References	74
6	Radar Receiver Circuits	77
6.1	Low-Noise Amplifiers	78
6.1.1	LNA in CMOS Technology	78
6.1.2	LNA in SiGe:C Technology	83
6.1.3	Measurements of CMOS and SiGe LNAs	86
6.1.4	LNA Results Summary and Comparison	91
6.2	Mixers	92
6.2.1	Active Mixers	93
6.2.1.1	Active Mixer in CMOS Technology	93
6.2.1.2	Active Mixer in SiGe Technology	95
6.2.1.3	Measurements of CMOS and SiGe Active Mixers	97
6.2.1.4	Active Mixers Results Summary and Comparison	101
6.2.2	Passive Mixers	102
6.2.2.1	Passive Resistive Ring Mixer in CMOS Technology	102
6.2.2.2	Passive Bipolar Mixer in SiGe Technology	105
6.2.2.3	Measurements of CMOS and SiGe Passive Mixers	107
6.2.2.4	Passive Mixers Results Summary and Comparison	110
6.2.3	Comparison of Active and Passive Mixers	111

6.3	Single-Channel Receivers	112
6.3.1	Design of Active and Passive Receivers in CMOS	113
6.3.2	Receiver Measurements and Analysis	113
6.3.2.1	Chip Size	114
6.3.2.2	Power Consumption, Gain and Noise Figure	114
6.3.2.3	Linearity	116
6.3.2.4	Required LO Power	118
6.3.2.5	Isolation	119
6.3.2.6	Temperature Performance	120
6.3.3	Receiver Results Summary and Comparison	121
6.4	IQ Receivers	122
6.4.1	Design of IQ Receivers	122
6.4.1.1	IQ Receiver in CMOS Technology	122
6.4.1.2	IQ Receiver in SiGe Technology	124
6.4.2	IQ Receiver Measurements	125
6.4.3	IQ Receiver Results Summary and Comparison	131
6.5	Integrated Passive Circuits	132
6.5.1	Circuit Design and Layout Considerations	132
6.5.1.1	On-Chip 180° Power Splitter/Combiner	132
6.5.1.2	On-Chip 90° Power Splitter/Combiner	134
6.5.1.3	On-Chip 180° Hybrid Ring Coupler	136
6.5.2	Realization and Measurement Results	137
6.5.2.1	On-Chip 180° Power Splitter/Combiner	137
6.5.2.2	On-Chip 90° Power Splitter/Combiner	138
6.5.2.3	On-Chip 180° Hybrid Ring Coupler	140
6.5.3	Results Summary and Discussion	143
6.6	Circuit-Level RF ESD Protection	144
6.6.1	Overview of Circuit-Level Protection Techniques	145
6.6.2	Virtual Ground Concept	147
6.6.2.1	Concept Verification by Circuit Simulation	149
6.6.2.2	Concept Verification by HBM Measurement	150
6.6.2.3	Concept Verification by TLP Measurement	151
6.6.3	Transformer Protection Concept	153
6.6.3.1	Test LNA Circuit Design	155
6.6.3.2	Test LNA Realization and Measurement	156
6.6.3.3	Concept Verification by TLP Measurement	157
