<b>Preface</b> .....	V
<b>Suggestions for the Reader</b> .....	XV
<b>Basic Notation</b> .....	XIX
<b>Motivation and Brief Survey</b> .....	XXIII
<b>1 Stochastic Differential Equations with Jumps</b> .....	1
1.1 Stochastic Processes .....	1
1.2 Supermartingales and Martingales .....	16
1.3 Quadratic Variation and Covariation .....	23
1.4 Itô Integral .....	26
1.5 Itô Formula .....	34
1.6 Stochastic Differential Equations .....	38
1.7 Linear SDEs .....	45
1.8 SDEs with Jumps .....	53
1.9 Existence and Uniqueness of Solutions of SDEs .....	57
1.10 Exercises .....	59
<b>2 Exact Simulation of Solutions of SDEs</b> .....	61
2.1 Motivation of Exact Simulation .....	61
2.2 Sampling from Transition Distributions .....	63
2.3 Exact Solutions of Multi-dimensional SDEs .....	78
2.4 Functions of Exact Solutions .....	99
2.5 Almost Exact Solutions by Conditioning .....	105
2.6 Almost Exact Simulation by Time Change .....	113
2.7 Functionals of Solutions of SDEs .....	123
2.8 Exercises .....	136

<b>3</b>	<b>Benchmark Approach to Finance and Insurance</b>	139
3.1	Market Model	139
3.2	Best Performing Portfolio	142
3.3	Supermartingale Property and Pricing	145
3.4	Diversification	149
3.5	Real World Pricing Under Some Models	158
3.6	Real World Pricing Under the MMM	168
3.7	Binomial Option Pricing	176
3.8	Exercises	185
<b>4</b>	<b>Stochastic Expansions</b>	187
4.1	Introduction to Wagner-Platen Expansions	187
4.2	Multiple Stochastic Integrals	195
4.3	Coefficient Functions	202
4.4	Wagner-Platen Expansions	206
4.5	Moments of Multiple Stochastic Integrals	211
4.6	Exercises	230
<b>5</b>	<b>Introduction to Scenario Simulation</b>	233
5.1	Approximating Solutions of ODEs	233
5.2	Scenario Simulation	245
5.3	Strong Taylor Schemes	252
5.4	Derivative-Free Strong Schemes	266
5.5	Exercises	271
<b>6</b>	<b>Regular Strong Taylor Approximations with Jumps</b>	273
6.1	Discrete-Time Approximation	273
6.2	Strong Order 1.0 Taylor Scheme	278
6.3	Commutativity Conditions	286
6.4	Convergence Results	289
6.5	Lemma on Multiple Itô Integrals	292
6.6	Proof of the Convergence Theorem	302
6.7	Exercises	307
<b>7</b>	<b>Regular Strong Itô Approximations</b>	309
7.1	Explicit Regular Strong Schemes	309
7.2	Drift-Implicit Schemes	316
7.3	Balanced Implicit Methods	321
7.4	Predictor-Corrector Schemes	326
7.5	Convergence Results	331
7.6	Exercises	346

<b>8</b>	<b>Jump-Adapted Strong Approximations</b>	347
8.1	Introduction to Jump-Adapted Approximations	347
8.2	Jump-Adapted Strong Taylor Schemes	350
8.3	Jump-Adapted Derivative-Free Strong Schemes	355
8.4	Jump-Adapted Drift-Implicit Schemes	356
8.5	Predictor-Corrector Strong Schemes	359
8.6	Jump-Adapted Exact Simulation	361
8.7	Convergence Results	362
8.8	Numerical Results on Strong Schemes	368
8.9	Approximation of Pure Jump Processes	375
8.10	Exercises	388
<b>9</b>	<b>Estimating Discretely Observed Diffusions</b>	389
9.1	Maximum Likelihood Estimation	389
9.2	Discretization of Estimators	393
9.3	Transform Functions for Diffusions	397
9.4	Estimation of Affine Diffusions	404
9.5	Asymptotics of Estimating Functions	409
9.6	Estimating Jump Diffusions	413
9.7	Exercises	417
<b>10</b>	<b>Filtering</b>	419
10.1	Kalman-Bucy Filter	419
10.2	Hidden Markov Chain Filters	424
10.3	Filtering a Mean Reverting Process	433
10.4	Balanced Method in Filtering	447
10.5	A Benchmark Approach to Filtering in Finance	456
10.6	Exercises	475
<b>11</b>	<b>Monte Carlo Simulation of SDEs</b>	477
11.1	Introduction to Monte Carlo Simulation	477
11.2	Weak Taylor Schemes	481
11.3	Derivative-Free Weak Approximations	491
11.4	Extrapolation Methods	495
11.5	Implicit and Predictor-Corrector Methods	497
11.6	Exercises	504
<b>12</b>	<b>Regular Weak Taylor Approximations</b>	507
12.1	Weak Taylor Schemes	507
12.2	Commutativity Conditions	514
12.3	Convergence Results	517
12.4	Exercises	522

<b>13</b>	<b>Jump-Adapted Weak Approximations</b>	523
13.1	Jump-Adapted Weak Schemes	523
13.2	Derivative-Free Schemes	529
13.3	Predictor-Corrector Schemes	530
13.4	Some Jump-Adapted Exact Weak Schemes	533
13.5	Convergence of Jump-Adapted Weak Taylor Schemes	534
13.6	Convergence of Jump-Adapted Weak Schemes	543
13.7	Numerical Results on Weak Schemes	548
13.8	Exercises	569
<b>14</b>	<b>Numerical Stability</b>	571
14.1	Asymptotic $p$ -Stability	571
14.2	Stability of Predictor-Corrector Methods	576
14.3	Stability of Some Implicit Methods	583
14.4	Stability of Simplified Schemes	586
14.5	Exercises	590
<b>15</b>	<b>Martingale Representations and Hedge Ratios</b>	591
15.1	General Contingent Claim Pricing	591
15.2	Hedge Ratios for One-dimensional Processes	595
15.3	Explicit Hedge Ratios	601
15.4	Martingale Representation for Non-Smooth Payoffs	606
15.5	Absolutely Continuous Payoff Functions	616
15.6	Maximum of Several Assets	621
15.7	Hedge Ratios for Lookback Options	627
15.8	Exercises	635
<b>16</b>	<b>Variance Reduction Techniques</b>	637
16.1	Various Variance Reduction Methods	637
16.2	Measure Transformation Techniques	645
16.3	Discrete-Time Variance Reduced Estimators	658
16.4	Control Variates	669
16.5	HP Variance Reduction	677
16.6	Exercises	694
<b>17</b>	<b>Trees and Markov Chain Approximations</b>	697
17.1	Numerical Effects of Tree Methods	697
17.2	Efficiency of Simplified Schemes	712
17.3	Higher Order Markov Chain Approximations	720
17.4	Finite Difference Methods	734
17.5	Convergence Theorem for Markov Chains	744
17.6	Exercises	753
<b>18</b>	<b>Solutions for Exercises</b>	755
	<b>Acknowledgements</b>	781

<b>Bibliographical Notes</b> .....	783
<b>References</b> .....	793
<b>Author Index</b> .....	835
<b>Index</b> .....	847

Numerical Solution of Stochastic Differential Equations  
with Jumps in Finance

Platen, E.; Bruti-Liberati, N.

2010, XXVIII, 856 p., Hardcover

ISBN: 978-3-642-12057-2
