

# Contents

<b>1</b>	<b>Market Research: Overcoming Incomplete, Inconsistent, or Outdated Data</b>	<b>1</b>
1.1	A Quick Review of Fundamental Theory	1
1.2	What is an Aviation Market?	2
1.3	Outbound Markets	4
1.4	Inbound Markets	5
1.5	O&Ds, Routes, and Flights	6
1.6	Accessing Essential Market Research Data	9
1.7	Researching Local Aviation Markets	9
1.8	Researching City-Pair Markets	10
1.8.1	Traffic Projections Based on Time Series	11
1.8.2	Upscaling	12
1.8.3	Gravitation Models	12
1.8.4	Reverse Engineering	13
1.8.5	White Spaces and Inconsistencies	13
<b>2</b>	<b>Network Structures Follow Network Strategies</b>	<b>15</b>
2.1	Complying with Basic Operational Rules	16
2.2	Sequencing Flights into Rotations	16
2.2.1	Turnaround Time is Non-Productive Time	19
2.2.2	Building Sequences of Flights: FiFo and LiFo	19
2.3	Hub-and-Spoke: The Answer to Deregulation?	20
2.3.1	Connectivity: The Central Paradigm of Hub-and-Spoke Structures	23
2.3.2	Connectivity and Codeshares: Camouflage or Mimicry?	27
2.3.3	Assessing Connectivity via Connection Builders	28
2.3.4	Evaluating Schedules with QSIs and Market Share Models	29
2.3.5	Spill and Recapture	31

2.4	Point-to-Point: The Answer to Hub-and-Spoke? . . . . .	31
2.4.1	Stuck in Between Hubs and Spokes? On Hublets . . . .	35
<b>3</b>	<b>Designing Connectivity-Driven Network and Hub Structures . . . .</b>	<b>37</b>
3.1	Connectivity Driver #1: Number of Inbound and Outbound Flights . . . . .	38
3.2	Connectivity Driver #2: Temporal Design of Individual Banks. . . . .	38
3.2.1	Bank Overlap . . . . .	41
3.2.2	Inbound–Outbound Overlap . . . . .	41
3.2.3	Inbound–Inbound and Outbound–Outbound Overlap . .	46
3.3	Special Topic: Rapid Banking . . . . .	46
3.4	Connectivity Driver #3: Number of Banks or Waves . . . . .	47
3.5	Connectivity Driver #4: Directionality. . . . .	50
3.6	Connectivity Driver #5: Rotational Patterns . . . . .	54
3.7	Connectivity Driver #6: Airport Infrastructure . . . . .	58
3.8	Connectivity Driver #7: Random Connectivity . . . . .	60
3.9	Connectivity Driver #8: Minimum Connecting Time (MCT) . .	61
3.10	Connectivity Driver #9: Internal Structure of Banks . . . . .	61
3.11	Timing of Long-Haul and Short/Medium-Haul Flights in a Bank System . . . . .	61
3.11.1	Structuring Banks and Hubs by the Value of Connections . . . . .	63
3.11.2	Connectivity and Operational Robustness: A Contradiction?. . . . .	64
<b>4</b>	<b>Designing Asset-Productive Networks . . . . .</b>	<b>65</b>
4.1	Aircraft Utilization Revisited: Why Asset Productivity is Vital for Profitability. . . . .	65
4.1.1	How to Measure Aircraft Utilization . . . . .	65
4.1.2	Bank Structures Significantly Impact Aircraft Utilization . . . . .	66
4.1.3	Operational Standardization Impacts Aircraft Utilization . . . . .	66
4.1.4	Infrastructure Availability Drives Aircraft Utilization Up or Down . . . . .	67
4.1.5	How Bank Design, On-Time Performance, and Operational Robustness are Interdependent . . . . .	68
4.1.6	Flat Hub Structures: A Revolutionary Innovation or a Surrender to Complexity? . . . . .	70
4.1.7	Rolling Hubs: Combining Connectivity and Flat Structures . . . . .	71
4.2	Random Hubbing: When Big Beats Complex. . . . .	73
4.2.1	Analytical Deduction. . . . .	73
4.2.2	Monte Carlo Simulation. . . . .	74

4.3	Who Should, and Should Not, Randomly Hub? . . . . .	75
4.4	Is Network Strategy an Experimental Discipline? On Hub Structure Evolution. . . . .	77
4.5	Special Topic: Micro Banks. . . . .	78
4.6	Not for the Fainthearted: Low-Cost Long Haul . . . . .	80
4.7	Breaking the Rules of Network Structure? On Pillar Flights . .	81
<b>5</b>	<b>Case Studies. . . . .</b>	<b>83</b>
5.1	Case #1 . . . . .	83
5.2	Case #2 . . . . .	90
<b>6</b>	<b>Planning and Controlling Networks: Networking Higher Math, Intuition, and Power Play . . . . .</b>	<b>93</b>
6.1	The Longer-Term Perspective: Strategic Planning. . . . .	93
6.2	The Medium-Term Perspective: Tactical Planning . . . . .	94
6.3	Short-Term and Ongoing Perspective: Network Control . . . . .	96
6.4	Organizational Structures of Network Management: How to Balance Power . . . . .	99
6.5	Structures Within Network Management Organizations. . . . .	99
	6.5.1 Structuring by Time Horizon . . . . .	100
	6.5.2 Structuring by Hub . . . . .	100
	6.5.3 Structuring by Region . . . . .	101
6.6	How to Make Money Through Networks: The Art of Network Controlling. . . . .	101
6.7	A Potentially Dangerous Concept: Route Profitability. . . . .	102
6.8	How to Allocate Cost and Revenue for Connecting Flights . .	103
	6.8.1 Route Profitability and Its Limitations. . . . .	103
	6.8.2 Network Value Contribution. . . . .	103
<b>7.</b>	<b>Competition, Cooperation, Co-opetition, and Antitrust: Balancing Economies of Scale and Competitive Market Structures . . . . .</b>	<b>105</b>
7.1	Synergies Among Networks: The Key Driver of Consolidation. . . . .	106
	7.1.1 Network Synergies are Difficult to Monitor . . . . .	107
	7.1.2 Synergies are Not Always the Top Priority in Mergers . . . . .	108
	7.1.3 Network Synergies: Value for Whom? . . . . .	108
7.2	Synergy Sharing Formulas: Simple or Fair, but Never Both. . .	109
7.3	Antitrust Immunity: Exempt from the Rules or Rules of Exemption?. . . . .	110
<b>8</b>	<b>Multi-Hub Networks: Masterpieces or Nightmares of Complexity?. . . . .</b>	<b>113</b>
8.1	Prototypes of Multi-Hub Strategies . . . . .	114

8.1.1	Scale, Scope, and Network Overlap in Multi-Hub Networks . . . . .	115
8.2	Self-Amplification of Growth. . . . .	115
8.3	Synchronizing O&Ds in Multi-Hub Networks . . . . .	116
8.3.1	How to Identify Insufficient Synchrony . . . . .	117
<b>9</b>	<b>Assessing and Comparing the Strengths and Weaknesses of Aviation Networks . . . . .</b>	<b>119</b>
9.1	How to Benchmark Demand Volume . . . . .	120
9.2	How to Benchmark Productivity and Capacity . . . . .	121
9.3	Why Benchmarking Connectivity is Vital to Uncovering Network Strategies . . . . .	121
9.4	How Big is a Network? The Importance of Benchmarking Geographical Scope . . . . .	123
9.5	What Risks are Associated with a Network, Compared to Others? . . . . .	123
9.6	Some Network Strategies Cannot be Identified by Isolated KPIs—they Require Analysis Over Time . . . . .	124
<b>10</b>	<b>An Overarching Concept: The Hierarchical Layers of Aviation Networks . . . . .</b>	<b>127</b>
10.1	Networks are Layers of Networks. . . . .	127
10.1.1	Demand Structures are the Basis for all Networks in Aviation . . . . .	129
10.1.2	A Spatial Network is Superimposed on the Demand Network . . . . .	130
10.1.3	The Temporal Layer is Added Next . . . . .	132
10.2	How the Concept of Layered Networks can Lead to Better Managed Networks . . . . .	134
10.2.1	Better Control of Network Complexity . . . . .	134
10.2.2	Network Management Key Processes Should Follow the Scope of Individual Network Layers. . . . .	134
10.2.3	Integrating Processes—Responsibilities, Accountabilities, Workflows, Decision Criteria, IT Systems—at the Same Layer . . . . .	135
10.2.4	Meta-Layers Advance the Understanding of the Aviation Value Chain . . . . .	135
	<b>Reference . . . . .</b>	<b>137</b>
	<b>Appendix: Market Research Ckecklists . . . . .</b>	<b>139</b>
	<b>Index . . . . .</b>	<b>143</b>
