1 Introducing Organizations as Social Systems Conducting

Experiments	1
1.1 Introduction	1
1.2 Making Sense of Organizations: From “Phenomena” to “Key Features”	1
1.2.1 Situation 1: Strategy Formulation	2
1.2.2 Situation 2: A Worker in Trouble	4
1.2.3 The First “Arche”: The Experimental Character of Organizations	6
1.2.4 The Second “Arche”: The Social Systemic Character of Organizations	6
1.2.5 The Relation Between the Social Systemic and the Experimental Character of Organizations	7
1.3 Organizations as Social Systems Conducting Experiments	8
1.3.1 Conducting Experiments	9
1.3.2 Organizations as Social Systems	17
1.4 Principles Improving Organizational Design	20
1.4.1 Functional Design Principles	21
1.4.2 Specific Design Principles	22
1.5 Conceptual Background	23
1.6 Outline of the Book	25
1.6.1 Part I: The Experimental and Social Arche of Organizations	25
1.6.2 Part II: Designing Organizations as Social Systems Conducting Experiments	27
1.6.3 Part III: Poor and Rich Survival	28
References	29

Part I The Experimental and Social Arche of Organizations

2 The Experimental Arche: Ashby’s Cybernetics	33
2.1 Introduction	33
2.2 Cybernetics: Effective Methods for the Study of Complex Systems	34
2.2.1 Describing Behavior: “Systems” and “Transformations”	35
2.2.2 Regular Behavior and Input	38
2.2.3 A procedure to Describe Behavior and Identify Regularity	40
2.3 Cybernetics: Effective Methods for the Control of Complex Systems	46
2.3.1 Ashby’s Views on Regulation: Definition, Types of Regulation and Requisite Variety	46
2.3.2 Control, Design and Operational Regulation	54
2.3.3 Adaptive Behavior	65

2.4 Organizations as Systems Conducting Experiments	69
References	73

3 The Experimental Arche Continued: Von Foerster

on Observing Systems	75
3.1 Introduction	75
3.2 Two problems in first-order cybernetics	78
3.2.1 The problem of selection	78
3.2.2 The problem of defining the transformation	79
3.2.3 Dealing with Both Problems: The Cybernetics of Observing	85
3.3 Observers as Closed Systems Producing Eigenvalues	86
3.3.1 Closed Systems and Their Eigenvalues	86
3.3.2 Closure, cognition and observing	94
3.3.3 Problems of First-order Cybernetics Revisited	104
3.4 Von Foerster and the Risky Nature of the Organizational Experiment	106
3.4.1 A Common Sense Understanding of Risk	107
3.4.2 A More Fundamental Understanding of Risk	108
3.4.3 Two Consequences of von Foerster's View on Risk	110
References	115

4 The Second “arche,” Organizations as Social Systems: Luhmann

4.1 Introduction	117
4.2 Luhmann's General Theory of Social Systems	118
4.2.1 Autopoietic or Self-Producing Systems	119
4.2.2 Meaning Processing Systems	128
4.2.3 Social Systems	133
4.3 The Social “arche”: Organizations as a Particular type of Social Systems	141
4.3.1 Elements of Organizations: Decisions	143
4.3.2 The Organization's Structure: Decision Premises	146
4.3.3 Processes of Self-Production: The Autopoiesis of Organizations	158
4.3.4 Questions Concerning Luhmann's Theory of Organizations	159
4.4 Organizations as social systems reflecting complexity	163
References	166

5 Epilogue to Part I: The Two “Archai” Combined

5.1 Introduction	167
5.2 Cybernetics and Social Systems Theory; an Exploratory Comparison	168
5.2.1 The Goal and Core Concepts of Respectively Cybernetics and Social Systems Theory	168
5.2.2 Cybernetics and Social Systems Theory Compared	170
5.3 Combining the Experimental and the Social “Arche”	172
5.4 Transition to Part II: Designing organizations	176
References	177

Part II Designing Organizations as Social Systems Conducting Experiments

6 Beer: Functional Design Principles for Viable Infrastructures

6.1 Introduction	181
6.2 Viability and Complexity	183

6.2.1 Complexity Relations Between Environment, Organization, and Its Management	183
6.2.2 Three Strategies to Solve the Complexity Problem	184
6.3 A functional Model of Viability	193
6.3.1 What Does it Mean to Make a Functional Model of a Viable System?	193
6.3.2 Beer's Functional Model of Viable Organizations	196
6.3.3 Relations Between Functions	205
6.4 The Viable System Model and Social Systems Conducting Experiments	215
6.4.1 The Contribution of the VSM to Conducting Experiments	217
6.4.2 The VSM and Social Systems Theory	220
References	225
7 Specific Design Principles: de Sitter's Organizational Structures	227
7.1 Introduction	227
7.2 Designing Organizational Structures: Aiming at Attenuation and Amplification	230
7.2.1 Organizational Structures	231
7.2.2 Relevant Organizational Variables	241
7.2.3 Disturbances	243
7.2.4 Attenuation and Amplification by Organizational Structures	245
7.3 Principles for Designing Organizational Structures	246
7.3.1 Design Parameters	247
7.3.2 Using Design parameters to Formulate Design Principles	253
7.4 De Sitter's Organizational Structures and Conducting Experiments	277
7.4.1 Relating de Sitter to Ashby, Luhmann and Beer	277
7.4.2 How Do Low Parameter Structures Benefit Organizational Experimentation?	279
References	280
8 Epilogue to Part II: functional and specific design principles	281
8.1 Introduction	281
8.2 Summary of the Design Principles	281
8.2.1 Functional Design Principles	282
8.2.2 Specific Design Principles	282
8.3 The Status of the Design Principles	283
8.3.1 Principles of Experiments with Meaningful Survival	284
8.3.2 Design Principles Figuring in Experiments with Meaningful Survival	285
8.4 Transition to Part III: Poor and Rich Survival	287
Part III Poor and Rich Survival	
9 Poor Survival: Disciplining Organizational Behavior	291
9.1 Introduction	291
9.2 Foucault: The Disciplines in the Eighteenth Century	293
9.2.1 The Analysis of Space	294
9.2.2 The Analysis of Bodily Operations	294
9.2.3 The Analysis of the Process of Production	295
9.2.4 The Synthesis of Space, Bodily Operations and the Process of Production	295
9.2.5 Hierarchical Surveillance	295
9.2.6 Normalizing Sanctions	297
9.2.7 Examination	298

9.3 A Cybernetic and Social Systemic Generalization of the Disciplines	299
9.3.1 Cybernetic Analysis of the Disciplines	300
9.3.2 A Social Systemic Analysis of the Disciplines	305
9.3.3 Cybernetic and Social Systemic Principles Underpinning Discipline in Organizations	308
9.4 Why are the Disciplines Disquieting?	309
9.4.1 Trivialization	310
9.4.2 Self-Trivialization	311
9.4.3 Fear as a Prime Motivational Factor	311
9.4.4 A Science of Discipline	312
9.4.5 Detachment and Lack of Involvement	312
9.4.6 Contingent and Minimal Goals	313
References	315
10 Towards Rich Survival: Aristotle	317
10.1 Introduction	317
10.2 The Highest Good for Man: Basic Distinctions	320
10.2.1 The Highest Good for Man: Living a Fulfilled Life	320
10.2.2 Characteristically Human Capacities and the Fulfilled Life	322
10.2.3 Virtues Involved in Eudaimonia	324
10.3 Eupraxia: Moral Virtue, Practical Wisdom, and Choice	327
10.3.1 Moral Virtue	328
10.3.2 Practical Wisdom	331
10.4 Aristotle Versus the Disciplines	348
References	349
11 Organizational Structures Supporting Rich Survival	351
11.1 Introduction	351
11.2 Incorporating the Organization into Society	351
11.3 Rich Survival: Specific Design Principles and Corresponding Structures	357
11.3.1 Requirements to and Design Principles for “Rich” Organizational Structures	357
11.3.2 Production and Control Structures Fitting the Design Principles	370
11.4 Organizations and Rich Meaningful Survival	375
References	378
12 Epilogue	379
12.1 Introduction	379
12.2 Organizations, “Archai”, Design Principles, and “Rich” Survival	379
12.3 Rich Survival: Its Applicability to Organizations and Relation to Poor Survival	381
12.4 Things to do	384
References	385
Index	387

Organizations

Social Systems Conducting Experiments
