
Contents

Part I Invited speakers

Large Scale Computations in Nuclear Engineering: CFD for Multiphase Flows and DNS for Turbulent Flows with/without Magnetic Field
Tomoaki Kunugi, Shin-ichi Satake, Yasuo Ose, Hiroyuki Yoshida, Kazuyuki Takase 3

Scalable algebraic multilevel preconditioners with application to CFD
Andrea Aprovitola, Pasqua D'Ambra, Filippo Denaro, Daniela di Serafino, Salvatore Filippone 15

Acceleration of iterative solution of series of systems due to better initial guess
Damien Tromeur-Dervout, Yuri Vassilevski 29

Part II Optimisation in Aerodynamics Design

Aerodynamic Study of Vertical Axis Wind Turbines
Merim Mukinović, Gunther Brenner, Ardavan Rahimi 43

Parallel Shape Optimization of a Missile on a Grid Infrastructure
Erdal Oktay, Osman Merttopcuoglu, Cevat Sener, Ahmet Ketenci, Hasan U. Akay 51

Analysis of Aerodynamic Indices for Racing Sailing Yachts: a Computational Study and Benchmark on up to 128 CPUs.
Ignazio Maria Viola, Raffaele Ponzini, Daniele Rocchi, Fabio Fossati 61

Parallel implementation of fictitious surfaces method for aerodynamic shape optimization
S. Peigin, B. Epstein, S. Gali 71

Path Optimization of Dual Airfoils Flapping in a Biplane Configuration with RSM in a Parallel Computing Environment	
<i>Mustafa Kaya, Ismail H. Tuncer</i>	83

Part III Grid methods

Convergence Improvement Method for Computational Fluid Dynamics Using Building-Cube Method	
<i>Takahiro Fukushige Toshihiro Kamatsuchi Toshiyuki Arima and Seiji Fujino</i> . . .	93

Aerodynamic Analysis of Rotor Blades using Overset Grid with Parallel Computation	
<i>Dong-Kyun Im, Seong-Yong Wie, Eugene Kim, Jang-Hyuk Kwon, Duck-Joo Lee, and Ki-Hoon Chung, and Seung-Bum Kim</i>	101

Large scale massively parallel computations with the block-structured elsA CFD software	
<i>M. Gazaix, S. Mazet, M. Montagnac</i>	111

Applications on Hybrid Unstructured Moving Grid Method for Three-Dimensional Compressible Flows	
<i>Hiroya Asakawa Masashi Yamakawa and Kenichi Matsuno</i>	119

Progressive Development of Moving-Grid Finite-Volume Method for Three-Dimensional Incompressible Flows	
<i>Shinichi ASAO, Sadanori ISHIHARA, Kenichi MATSUNO, Masashi YAMAKAWA</i>	127

Part IV Boundary methods

Flow Computations Using Embedded Boundary Conditions on Block Structured Cartesian Grid	
<i>T. Kamatsuch, T. Fukushige, K. Nakahashi</i>	137

Computation of Two-phase Flow in Flip-chip Packaging Using Level Set Method	
<i>Tomohisa Hashimoto, Keiichi Saito, Koji Morinishi,, Nobuyuki Satofuka</i>	145

A Parallel Immersed Boundary Method for Blood-like Suspension Flow Simulations	
<i>F. Pacull, M. Garbey</i>	153

Part V High Order methods

3D Spectral Parallel Multi-Domain computing for natural convection flows
S. Xin, J. Chergui, P. Le Quéré 163

3D time accurate CFD simulations of a centrifugal compressor
Andreas Lucius, Gunther Brenner 173

Part VI Parallel Algorithms and Solvers

Multicolor SOR Method with Consecutive Memory Access Implementation in a Shared and Distributed Memory Parallel Environment
Kenji Ono, Yasuhiro Kawashima 183

Proper Orthogonal Decomposition In Decoupling Large Dynamical Systems
Toan Pham, Damien Tromeur-Dervout 193

Performance Analysis of the Parallel Aitken-Additive Schwarz Waveform Relaxation Method on Distributed Environment
Hatem Ltaief, Marc Garbey 203

Aitken-Schwarz Acceleration not based on the mesh for CFD
D. Tromeur-Dervout 211

From extruded-2D to fully-3D geometries for DNS: a Multigrid-based extension of the Poisson solver
A. Gorobets, F. X. Trias, M. Soria, C. D. Pérez-Segarra, A. Oliva 219

Parallel direct Poisson solver for DNS of complex turbulent flows using Unstructured Meshes
R. Borrell, O. Lehmkuhl, F. X. Trias, M. Soria, A. Oliva 227

A numerical scheme for the computation of phase transition in compressible multiphase flows
Vincent Perrier 235

Part VII Lattice Boltzman and SPH Methods

Lattice Boltzmann Simulations of Slip Flow of Non-Newtonian Fluids in Microchannels
Ramesh K. Agarwal and Lee Chusak 247

Multiple Relaxation Time Lattice Boltzmann simulation of binary droplet collisions
Ernesto Monaco, Kai H. Luo, Gunther Brenner 257

High-Performance Computing and Smoothed Particle Hydrodynamics <i>C. Moulinec, R. Issa, D. Latino, P. Vezolle, D.R. Emerson and X.J. Gu</i>	265
---	-----

Part VIII software Framework and Component Architecture

An integrated object-oriented approach for parallel CFD <i>Dominique Eyheramendy, David Loureiro, Fabienne Oudin-Dardun</i>	275
Fast Multipole Method for particle interactions: an open source parallel library component <i>F. A. Cruz, M. G. Knepley, L. A. Barba</i>	285
Hybrid MPI-OpenMP performance in massively parallel computational fluid dynamics <i>G. Houzeaux, M. Vázquez, X. Sáez and J.M. Cela</i>	293
Hierarchical adaptive multi-mesh partitioning algorithm on heterogeneous systems <i>Y. Mesri, H. Digonnet, T. Coupez</i>	299

Part IX Parallel Performance

Towards Petascale Computing with Parallel CFD codes <i>A.G. Sunderland, M. Ashworth, C. Moulinec, N. Li, J. Uribe, Y. Fournier</i>	309
Scalability Considerations of a Parallel Flow Solver on Large Computing Systems <i>Erdal Yilmaz, Resat U. Payli, Hassan U. Akay, Akin Ecer, and Jingxin Liu</i>	321
Large Scaled Computation of Incompressible Flows on Cartesian Mesh Using a Vector-Parallel Supercomputer <i>Shun Takahashi, Takashi Ishida, Kazuhiro Nakahashi, Hiroaki Kobayashi, Koki Okabe, Youichi Shimomura, Takashi Soga, Akihiko Musa</i>	331
Dynamic Load Balancing on Networked Multi-core Computers <i>Stanley Chien, Gun Makinabakan, Akin Ecer, and Hasan Akay</i>	339
On efficiency of supercomputers in CFD simulations <i>Andrey V. Gorobets, Tatiana K. Kozubskaya, Sergey A. Soukov</i>	347

Part X Environment and biofluids applications

Numerical Study of Pulsatile Flow Through Models of Vascular Stenoses with Physiological Waveform of the Heart <i>Jason D. Thompson, Christian F. Pinzn and Ramesh K. Agarwal</i>	357
---	-----

Fluid Flow - Agent Based Hybrid Model for the Simulation of Virtual Prairies	
<i>Marc Garbey, Cendrine Mony, Malek Smaoui</i>	369
HPC for hydraulics and industrial environmental flow simulations	
<i>Réza Issa, Fabien Decung, Emile Razafindrakoto, Eun-Sug Lee, Charles Moulinec, David Latino, Damien Violeau, Olivier Boiteau</i>	377
Multi-parametric intensive stochastic simulations for hydrogeology on a computational grid	
<i>J. Erhel, J.-R. de Dreuzy, E. Bresciani</i>	389
Parallel computation of pollutant dispersion in industrial sites	
<i>J. Montagnier, M. Buffat, D. Guibert</i>	399
Part XI General fluid	
3D Numerical Simulation Of Gas Flow Around Reentry Vehicles	
<i>S.V. Polyakov, T.A. Kudryashova, E.M. Kononov, A.A. Sverdlin</i>	409
Effective Parallel Computation of Incompressible Turbulent Flows on Non-uniform Grid	
<i>Hidetoshi Nishida, Nobuyuki Ichikawa</i>	417
Secondary flow structure of turbulent Couette-Poiseuille and Couette flows inside a square duct	
<i>Hsin-Wei Hsu, Jian-Bin Hsu, Wei Lo, Chao-An Lin</i>	425

Parallel Computational Fluid Dynamics 2008

Parallel Numerical Methods, Software Development and
Applications

Tromeur-Dervout, D.; Brenner, G.; Emerson, D.R.; Erhel,
J. (Eds.)

2010, XIV, 438 p. 233 illus., Hardcover

ISBN: 978-3-642-14437-0
