PREFACE TO THE REVISED EDITION	xi
PREFACE TO THE FIRST EDITION	xiii
NOTATIONS AND CONVENTIONS	xv
1 Introduction: Macromolecular Systems in Equilibrium	1
1.1 Microscopic Models of a Macromolecule	1
1.2 Bead-and-Spring Model	3
1.3 Normal Co-Ordinates	5
1.4 Macromolecular Coil	6
1.5 Excluded-Volume Effects	8
1.6 Macromolecules in a Solvent	11
1.6.1 Macromolecules in a Dilute Solution	12
1.6.2 Weakly-Coupled Macromolecules	13
1.7 Elasticity of Polymer Networks	16
1.8 Crystalline and Glassy Systems	19
2 Dynamics of a Macromolecule in a Viscous Liquid	21
2.1 Equation of Macromolecular Dynamics	21
2.2 Intramacromolecular Hydrodynamic Interactions	22
2.3 Resistance-Drag Coefficient of a Macromolecular Coil	24
2.4 Effective Resistance-Drag Coefficient of a Particle	26
2.5 Intramolecular Friction	28
2.6 The Cerf-Zimm-Rouse Modes	31
2.7 The Moments of Linear Modes	32
2.7.1 Equations for the Moments of Co-ordinates	33
2.7.2 The Slowest Relaxation Processes	33
2.7.3 Fourier-Transforms of Moments	35

3	Dynamics of a Macromolecule in an Entangled System	37
3.1	Admitted Approximations in the Many-Chain Problem	38
3.1.1	Dynamics of Entangled Course-Grained Chains	38
3.1.2	Dynamics of a Probe Macromolecule	40
3.2	The General Form of Dynamic Equation	42
3.2.1	The Linear Approximation	43
3.2.2	A Non-Linear Approximation – Local Anisotropy	45
3.3	Molecular Interpretation of the Dissipative Terms	46
3.3.1	Concept of Microviscoelasticity	46
3.3.2	External Friction	48
3.3.3	Intramolecular Friction	51
3.3.4	Fundamental Dynamical Parameters	53
3.4	Markovian Form of Dynamic Equation	54
3.5	Reptation-Tube Model	56
3.6	Method of Numerical Simulation	59
3.6.1	Non-Dimensional Form of Dynamic Equation	59
3.6.2	Algorithm of Calculation	61
4	Conformational Relaxation	63
4.1	Correlation Functions for the Linear Dynamics	63
4.1.1	Modified Cerf-Rouse Modes	63
4.1.2	Equilibrium Correlation Functions	66
4.1.3	One-Point Non-Equilibrium Correlation Functions	68
4.1.4	Two-Point Non-Equilibrium Correlation Functions	69
4.2	Relaxation of Macromolecular Coil	71
4.2.1	Correlation Functions for Isotropic Motion	71
4.2.2	Effect of Local Anisotropy	73
4.2.3	Transition Point	77
4.2.4	Conformational Relaxation Times	78
4.3	Macromolecular Coil in a Flow	79
4.3.1	Non-Equilibrium Correlation Functions	79
4.3.2	Size and Form of the Macromolecular Coil	80
5	The Localisation Effect	83
5.1	Mobility of a Macromolecule	83
5.1.1	A Macromolecule in a Viscous Liquid	84
5.1.2	A Macromolecule in an Entangled System	85
5.2	Quasi-Elastic Neutron Scattering	93
5.2.1	The Scattering Function	94
5.2.2	An Estimation of Intermediate Length	96

6	Linear Viscoelasticity	99
6.1	Stresses in the Flow System	99
6.1.1	The Stress Tensor	99
6.1.2	Oscillatory Deformation	102
6.2	Macromolecules in a Viscous Liquid	103
6.2.1	The Stress Tensor	103
6.2.2	Dynamic Characteristics	105
6.2.3	Initial Intrinsic Viscosity	107
6.2.4	On the Effect of Internal Viscosity	109
6.3	Macromolecules in a Viscoelastic Liquid	111
6.3.1	The Stress Tensor	111
6.3.2	Dynamic Characteristics	112
6.4	Entangled Macromolecules	115
6.4.1	The Stress Tensor	116
6.4.2	Dynamic Modulus and Relaxation Branches	118
6.4.3	Self-Consistency of the Mesoscopic Approach	122
6.4.4	Modulus of Elasticity and the Intermediate Length	124
6.4.5	Concentration and Macromolecular Length Dependencies	125
6.4.6	Frequency–Temperature Superposition	127
6.5	Dilute Blends of Linear Polymers	128
6.5.1	Relaxation of Probe Macromolecule	129
6.5.2	Characteristic Quantities	130
6.5.3	Terminal Relaxation Time	132
6.5.4	A Final Remark	134
7	Equations of Relaxation	135
7.1	Normal-Modes Form of Dynamic Equation	135
7.1.1	Transition to the Normal Modes	135
7.1.2	Anisotropy of Particle Mobility	137
7.2	Equations for the Non-Equilibrium Moments	139
7.3	Relaxation of the Macromolecular Conformation	143
7.3.1	Diffusive Relaxation	143
7.3.2	Reptation Relaxation	145
7.4	Relaxation of Orientational Variables	146
7.4.1	Weakly Entangled Systems	148
7.4.2	Strongly Entangled Systems	148
7.5	Relaxation of the Segment Orientation	149
7.5.1	Rubber Elasticity and Mean Orientation of Segments	149
7.5.2	Elementary Theory of Dielectric Relaxation	151

8	Relaxation Processes in the Phenomenological Theory	155
8.1	The Laws of Conservation of Momentum and Angular Momentum	155
8.2	The Law of Conservation of Energy and the Balance of Entropy	158
8.3	Thermodynamic Fluxes and Relaxation Processes	160
8.4	The Principle of Relativity for Slow Motions	163
8.5	Constitutive Relations for Non-Linear Viscoelastic Fluids	164
8.6	Different Forms of Constitutive Relation	167
9	Non-Linear Effects of Viscoelasticity	171
9.1	Dilute Polymer Solutions	171
9.1.1	Constitutive Relations	172
9.1.2	Non-Linear Effects in Simple Shear Flow	173
9.1.3	Non-Steady-State Shear Flow	175
9.1.4	Non-Linear Effects in Oscillatory Shear Motion	176
9.2	Many-Mode Description of Entangled Systems	178
9.2.1	Constitutive Relations	178
9.2.2	Linear Approximation	180
9.2.3	Steady-State Simple Shear Flow	184
9.3	Single-Mode Description of Entangled System	186
9.3.1	Weakly Entangled Systems	187
9.3.2	Strongly Entangled Systems	189
9.3.3	Vinogradov Constitutive Relation	191
9.3.4	Relation between Shear and Elongational Viscosities	194
9.3.5	Recoverable Strain	196
10	Optical Anisotropy	199
10.1	The Relative Permittivity Tensor	199
10.2	The Permittivity Tensor for Polymer Systems	202
10.2.1	Dilute Solutions	203
10.2.2	Entangled Systems	204
10.3	Optical Birefringence	206
10.3.1	Simple Elongation	206
10.3.2	Simple Shear	207
10.3.3	Oscillatory Deformation	208
10.4	Anisotropy in a Simple Steady-State Shear Flow	209
10.4.1	Dilute Solutions	209
10.4.2	Entangled Systems	211
10.5	Oscillatory Birefringence	211
10.5.1	Dilute Solutions	211
10.5.2	Entangled Systems	212

CONCLUSION	215
APPENDICES	217
A The Random Walk Problem	217
B Equilibrium Deformation of a Non-Linear Elastic Body	219
C The Tensor of Hydrodynamic Interaction	222
D Resistance Force of a Particle in a Viscoelastic Fluid	223
E Resistance Coefficient of a Particle in Non-Local Fluid	225
F Dynamics of Suspension of Dumbbells	228
G Estimation of Some Series	239
