

CONTENTS

1	Ca ²⁺ Reactivity in the Gas Phase. Bonding, Catalytic Effects and Coulomb Explosions	1
	<i>Inés Corral, Cristina Trujillo, Jean-Yves Salpin, and Manuel Yáñez</i>	
1.1	Introduction	2
1.2	Structure and Bonding of Ca ²⁺ Complexes	3
1.3	Stability of Ca ²⁺ Complexes in the Gas Phase	11
1.4	Reactivity Of Ca ²⁺ Ions in the Gas Phase	14
	References	29
2	From the Gas Phase to a Lipid Membrane Environment: DFT and MD Simulations of Structure and Dynamics of Hydrogen-Bonded Solvates of Bifunctional Heteroazaaromatic Compounds	35
	<i>Alexander Kyrychenko and Jacek Waluk</i>	
2.1	Introduction	36
2.2	Electronic Structure of 1H-pyrrolo[3,2- <i>h</i>]quinoline	38
2.3	Structure of Gas-Phase Complexes	41
2.3.1	Hydrogen-Bonded Complexes with Water	41
2.3.2	Excited-State Proton Transfer Through Water Bridges	43
2.3.3	Hydrogen-Bonded Complexes with Methanol	46
2.3.4	Cluster Size Effect on Fluorescence Quenching in Hydrogen-Bonded Complexes of PQ with Methanol ..	50
2.4	Hydrogen Bonding of Heteroazaaromatics in Solution	51
2.4.1	Hydrogen-Bonded Complexes with Methanol and Water	52
2.4.2	Hydrogen-Bonding Dynamics in Bulk Solvents	56
2.5	Hydrogen-Bonding-Induced and Excited-state Phenomena in Bifunctional Donor–Acceptor Molecules	58
2.6	Interaction of Heteroazaaromatics with Lipid Membranes	60
2.6.1	Hydrogen-Bonding at the Membrane Interface	63
2.7	Probing the Acid–Base Equilibrium at the Membrane Interface	67
2.8	Conclusions	71
	References	72

3	Formamide as the Model Compound for Photodissociation Studies of the Peptide Bond	77
	<i>Mirjana Eckert-Maksić, Ivana Antol, Mario Vazdar, Mario Barbatti, and Hans Lischka</i>	
3.1	Introduction	78
3.2	An Overview of Computational Methods for Studying Dynamics of Fast Photodissociation Processes	79
3.3	Computational Details	82
3.4	Simulations of Non-Adiabatic Photodynamics of Formamide ...	83
3.4.1	Gas Phase Studies.	83
3.4.2	Photodissociation of Substituted Formamides	89
3.5	Effect of Protonation on Photodissociation of Formamide.	96
3.6	Effect of Environment on Photodissociation of Formamide. ...	100
3.7	Conclusions and Final Remarks	102
	References	104
4	Design of Catalysts for Asymmetric Organic Reactions Through Density Functional Calculations	107
	<i>C.B. Shinisha, Deepa Janardanan, and Raghavan B. Sunoj</i>	
4.1	Introduction	107
4.1.1	Organocatalytic Reactions and Theoretical Models ...	108
4.1.2	Sulfur Ylide Promoted Reactions	111
4.2	Computational Methods	113
4.2.1	Terminology.	114
4.3	Results and Discussion	114
4.3.1	Intermolecular Aldol Reaction	114
4.3.2	Sulfur Ylide Promoted Reactions	123
4.4	Summary	133
	References	134
5	Reactive Processes with Molecular Simulations	137
	<i>Sabyashachi Mishra and Markus Meuwly</i>	
5.1	Introduction	137
5.2	Conceptual Approaches	140
5.2.1	Molecular Mechanics with Proton Transfer.	140
5.2.2	Reactive Molecular Dynamics	141
5.2.3	Empirical Valence Bond.	142
5.2.4	ReaxFF.	143
5.2.5	Other Approaches.	145
5.3	Applications	145
5.3.1	Proton Transfer Reactions.	145
5.3.2	Ligand Binding in Heme Proteins.	148

5.4	Outlook	151
	References	153
6	Theoretical Studies of Polymerisation Reactions	157
	<i>Marek Cypryk and Grzegorz Krasinski</i>	
6.1	Introduction	157
6.1.1	Methods for Modelling of Polymers	158
6.1.2	Large-Scale Molecular Modelling Calculations on Biological Systems	163
6.1.3	Molecular Modelling Software for Describing Transition Structures and Minimum Energy Paths. . .	164
6.2	Computational Quantum Chemistry Studies of Polymerisation Mechanisms	164
6.2.1	Solvent Effects	166
6.2.2	Free-Radical Polymerisation	166
6.2.3	Ionic Polymerisation	169
6.2.4	Coordination Polymerisation	175
6.2.5	Polycondensation	177
6.3	Enzymatic Reactions	177
6.4	Structural Studies	179
6.5	Summary	180
	References	180
7	Evaluation of Proton Transfer in DNA Constituents: Development and Application of Ab Initio Based Reaction Kinetics	187
	<i>Dmytro Kosenkov, Yana Kholod, Leonid Gorb, and Jerzy Leszczynski</i>	
7.1	Introduction	188
7.2	Methodology	189
7.2.1	Ab Initio Based Computation of Reaction Rates	189
7.2.2	Numerical Solution of a System of Rate Equations . . .	191
7.3	Applications of the Reaction Kinetics Models to the Studies of Proton Transfer in DNA Constituents	192
7.3.1	Tautomerization of Nucleobases in the Gas Phase. . .	192
7.3.2	Tautomerization of Isolated and Monohydrated Cytosine and Guanine at Room Temperature	202
7.3.3	Role of Hydrated Metal Ions for Nucleic Acids Stabilization	204
7.3.4	Gas Phase Tautomerization in AT and GC Pairs of DNA Bases	208
7.4	Conclusions	209
	References	210

8	Simulation of Charge Transfer in DNA	213
	<i>Tomáš Kubař and Marcus Elstner</i>	
8.1	Introduction	213
8.1.1	Basics of Hole Transfer in DNA	214
8.1.2	Experimental Studies	214
8.1.3	Theory and Computation	217
8.1.4	Subject of This Contribution	220
8.2	Charge-Transfer Parameters	220
8.2.1	Ionization Potentials	220
8.2.2	Electronic Couplings	220
8.2.3	CT Parameters Within the Fragment-Orbital Approach	221
8.2.4	Summary	224
8.3	Effect of Dynamics and Environment on CT Parameters	224
8.3.1	Electronic Couplings	225
8.3.2	Ionization Potentials	225
8.3.3	Computation of CT Parameters Along MD Trajectories	226
8.3.4	Summary	230
8.4	Quantum Dynamics of a Hole in DNA	230
8.4.1	Integration of the Time-Dependent Schrödinger Equation	230
8.4.2	Simulation of Hole Transfer Over Adenine Bridges	231
8.4.3	Summary	235
8.5	Solvent Reorganization Energy and De-Localization of the Hole	236
8.5.1	Polarization of the Environment by the Hole Charge	236
8.5.2	Solvent Reorganization Energy	237
8.5.3	Spatial Extent of the Hole	238
8.5.4	How to Include the Response of Solvent in the Simulation?	239
8.6	Summary, Conclusions and Outlook	240
8.6.1	Fundamental Mechanism of Charge Transfer	241
8.6.2	De/localization of the Hole	241
8.6.3	Requirements on a Computational Model	242
	References	242
9	Quantum-Mechanical Molecular Dynamics of Charge Transfer	247
	<i>Victor M. Anisimov and Claudio N. Cavasotto</i>	
9.1	Introduction	248
9.2	Theoretical Part	249
9.3	The Notion of Charge Transfer	251
9.3.1	QM MD of Ubiquitin in Explicit Water	253
9.3.2	Charge Transfer Inside Protein	254

9.3.3	Charge Transfer Channel	255
9.3.4	Inequality Among Same-Type Amino Acids.	257
9.3.5	Protein-Solvent Charge Transfer.	261
9.4	Implications of Charge Transfer	264
	References	265
10	Beyond Standard Quantum Chemical Semi-Classic Approaches: Towards a Quantum Theory of Enzyme Catalysis	267
	<i>Orlando Tapia</i>	
10.1	Introduction	268
10.2	Enzyme Catalyzed Reactions	269
10.2.1	Transition Structures and Chemical Mechanisms	271
10.3	Exact Quantum Schemes	272
10.4	Semi-Classic Schemes and Beyond.	274
10.4.1	Semi-classic Hamiltonian Models.	274
10.4.2	Invariant Electronic Configuration Space Models	277
10.4.3	“Mobile” Electronic-Configuration-Space: Nodal Envelope States	278
10.5	Quantum Aspects of Catalysis	279
10.5.1	Model Quantum Catalyst: $H + H$ and H_2	279
10.5.2	Quantum Transition States	281
10.5.3	Abstract BO Transition Structures	283
10.6	Angular Momentum (Spin) and Chemical reactivity	285
10.6.1	Spin–Space Separation and Chemical Reactivity.	286
10.7	Photorespiration: Dioxygen	293
10.8	More Light.	295
