Preface to the First Edition v

Preface to the Second Edition vii

Preface to the Third Edition ix

Foreword xi

Nomenclature xiii

1 An Overview of Pneumatic Conveying Systems and Performance..... 1

1.1 Introduction 1

1.2 Why Pneumatic Conveying? 1

1.2.1 Advantages of a Pneumatic Conveying System 2

1.2.2 Disadvantages of a Pneumatic Conveying System 2

1.3 What Can Be Conveyed? 3

1.4 What Constitutes a Pneumatic Conveying System?..... 6

1.4.1 The Prime Mover 6

1.4.2 Feeding, Mixing and Acceleration Zone..... 7

1.4.3 The Conveying Zone..... 8

1.4.4 Gas–Solids Separation Zone 8

1.5 Modes of Pneumatic Conveying 8

1.5.1 Dilute Phase 9

1.5.2 Dense Phase 10

1.6 Basic Pneumatic Conveying Systems 10

1.6.1 Positive Pressure System 10

1.6.2 Negative Pressure Systems 11

1.6.3 Combined Negative–Positive Pressure Systems 12

1.6.4 Closed Loop System 13

1.7 Further Classification Techniques 13

1.7.1 Classification by Pressure of Operation..... 13

1.7.2 Classification by Solid Feeder Type 14

| | | |
|----------|---|-----------|
| 1.8 | Description and Operation of a Pneumatic Conveying System | 14 |
| 1.8.1 | State Diagram | 14 |
| 1.8.2 | Vertical and Horizontal Flow | 16 |
| 1.8.3 | Vacuum and Positive Pressure Systems | 16 |
| 1.9 | Putting It All Together | 18 |
| 1.9.1 | Feeding and Acceleration of Solids | 18 |
| 1.9.2 | Factors Contributing to Pressure Losses (Chapters 4–6) | 18 |
| 1.9.3 | Coarse and Fine Particle Suspensions | 19 |
| 1.9.4 | Horizontal Movement Through Pipe: Bed Formation . . . | 20 |
| 1.9.5 | Bend Flow (Chapter 4) | 21 |
| 1.9.6 | Stepped Piping Systems | 23 |
| 1.9.7 | Wear in Pneumatic Conveying Systems | 23 |
| 1.9.8 | Gas–Solids Separation | 23 |
| 1.9.9 | Safety | 23 |
| 1.10 | An Overview | 23 |
| 1.11 | Some Useful Conversion Factors | 25 |
| | References | 32 |
| 2 | Single Phase Flow in Pneumatic Conveying Systems | 35 |
| 2.1 | Introduction | 35 |
| 2.2 | Definitions | 35 |
| 2.2.1 | Free Air | 35 |
| 2.2.2 | Standard Temperature and Pressure (STP) | 36 |
| 2.2.3 | Standard Reference Conditions (SRC) | 36 |
| 2.2.4 | Free Air Delivered (FAD) | 37 |
| 2.3 | Perfect Gas Laws | 37 |
| 2.4 | Drying of Compressed Air | 37 |
| 2.5 | The Compression Process | 38 |
| 2.5.1 | Isothermal Compression | 39 |
| 2.5.2 | Adiabatic Compression | 40 |
| 2.5.3 | Temperature Rise During Adiabatic Compression | 41 |
| 2.5.4 | Power Requirements | 42 |
| 2.6 | Gas Flow Through Pipes | 44 |
| 2.6.1 | Types of Flow | 44 |
| 2.6.2 | Pipe Roughness | 46 |
| 2.6.3 | General Pressure Drop Formula | 46 |
| 2.6.4 | Resistance Due To Pipe Fittings | 48 |
| 2.7 | Illustrative Examples | 49 |
| | References | 54 |
| 3 | Fluid and Particle Dynamics | 55 |
| 3.1 | Introduction | 55 |
| 3.2 | Law of Continuity | 55 |

| | | |
|----------|--|-----------|
| 3.3 | Drag on a Particle | 56 |
| 3.3.1 | The Standard Drag Coefficient Curve | 56 |
| 3.3.2 | Effect of Shape on Drag | 58 |
| 3.3.3 | Effect of Fluid Turbulence..... | 59 |
| 3.3.4 | Effect of Voidage/Solid Concentration | 60 |
| 3.3.5 | Effect of Acceleration | 63 |
| 3.3.6 | Miscellaneous Other Effects | 64 |
| 3.4 | Equations for Calculation of Relevant Properties | 66 |
| 3.4.1 | Air Velocity | 66 |
| 3.4.2 | Terminal Velocity for a Particle | 66 |
| 3.4.3 | Pressure Drop Through a Packed Bed | 70 |
| 3.4.4 | Minimum Fluidization Velocity | 72 |
| 3.4.5 | Relationship Between v_{mf} and w_{fo} | 74 |
| 3.5 | Fluidization Characteristics of Powders | 75 |
| | References | 78 |
| 4 | Fundamentals | 81 |
| 4.1 | Introduction | 81 |
| 4.2 | Forces Acting on a Single Particle in an Air Stream | 81 |
| 4.3 | Particle Size | 82 |
| 4.4 | Shape | 85 |
| 4.5 | Dynamic Equations | 87 |
| 4.6 | Terminal Velocity | 89 |
| 4.7 | Single Particle Acceleration | 90 |
| 4.8 | Centrifugal Flow | 91 |
| 4.9 | Slip Velocity in a Gravitational Field | 92 |
| 4.10 | Multiple Particle Systems | 92 |
| 4.11 | Voidage and Slip Velocity | 95 |
| 4.12 | Frictional Representations | 98 |
| 4.13 | Acceleration and Development Regions | 100 |
| 4.14 | Particle Distribution in Pneumatic Conveying | 102 |
| 4.15 | Compressibility Effect Not Negligible | 103 |
| 4.16 | Speed of Sound in Gas–Solid Transport | 106 |
| 4.17 | Gas–Solid Flow with Varying Cross-Sectional Area | 108 |
| 4.18 | Branching Arrangements | 110 |
| 4.19 | Bend Analysis | 111 |
| 4.20 | Downward Sloping Particle Flow | 116 |
| 4.21 | Dense Phase Transport | 117 |
| 4.22 | Estimation of Pressure Drop in Slugging Dense Phase Conveying | 120 |
| 4.22.1 | Analogy Between Slugging Conveying and Slugging Fluidization | 120 |
| 4.22.2 | Pressure Drop Estimation in Slugging Conveying | 122 |

| | | |
|----------|--|------------|
| 4.23 | Estimation of Pressure Drop in Non-slugging Dense Phase Conveying | 123 |
| 4.23.1 | Model of Yerushalmi and Cankurt | 124 |
| 4.23.2 | Annular Flow Model of Nakamura and Capes | 126 |
| 4.24 | Plug Flows | 127 |
| 4.25 | Inclined Conveying | 136 |
| 4.26 | Simulations | 137 |
| 4.27 | Worked Examples | 139 |
| | References | 151 |
| 5 | Flow Regimes in Vertical and Horizontal Conveying | 155 |
| 5.1 | Introduction | 155 |
| 5.2 | Choking Versus Non-choking System in Vertical Flow | 159 |
| 5.2.1 | The Choking Phenomenon | 159 |
| 5.2.2 | Choking Versus Non-choking | 160 |
| 5.3 | Choking System in Vertical Flow | 167 |
| 5.3.1 | Prediction of Choking Velocity | 167 |
| 5.3.2 | Transition from Dense Phase Conveying to Packed Bed Conveying | 175 |
| 5.3.3 | A Quantitative Flow Regime Diagram in Vertical Flow | 175 |
| 5.4 | Non-choking System in Vertical Flow | 177 |
| 5.5 | Particle Segregation in Vertical Pneumatic Transport | 179 |
| 5.5.1 | Equations for Predicting Segregation | 179 |
| 5.6 | Saltation and Pick-Up in Horizontal Conveying | 180 |
| 5.6.1 | Theoretical Considerations | 180 |
| 5.6.2 | Saltation Velocity Correlations | 181 |
| 5.6.3 | A Quantitative Flow Regime Diagram for Horizontal Flow | 185 |
| 5.6.4 | Pick-Up Velocities | 186 |
| 5.6.5 | Interrelationship Between Saltation and Pick-Up Velocities | 187 |
| 5.6.6 | Superficial Velocities in Particle-Fluid Systems Leading to a Generalized Presentation | 187 |
| 5.7 | Circulating Fluid Beds | 190 |
| | References | 190 |
| 6 | Principles of Pneumatic Conveying | 193 |
| 6.1 | Introduction: Putting It All Together | 193 |
| 6.2 | The State Diagram Revisited | 193 |
| 6.2.1 | Modes of Pneumatic Conveying | 194 |
| 6.2.2 | The General State Diagram and the Normalized State Diagram | 194 |
| 6.2.3 | The Dimensionless State Diagram | 196 |
| 6.2.4 | General Phase Diagram for Fine Particles | 197 |

| | | |
|----------|--|------------|
| 6.2.5 | Diagram of State | 199 |
| 6.2.6 | The Dimensionless Pressure Minimum Curve | 201 |
| 6.2.7 | Verification of $\mu \rightarrow Fr$ Relationship | 202 |
| 6.2.8 | The Relationship Between the Performance Characteristics of the Prime Mover and Product Flow Characteristics | 203 |
| 6.3 | Methods for Scaling Up | 206 |
| 6.3.1 | Geometric Similarity | 207 |
| 6.3.2 | Dynamic Similarity | 207 |
| 6.3.3 | Flow Similarity | 208 |
| 6.4 | Use of Theoretical Models and Definitions | 209 |
| 6.4.1 | Compilation of Power Balance | 209 |
| 6.4.2 | Aerodynamic Force or Drag | 210 |
| 6.4.3 | Forces of Impact and Friction | 211 |
| 6.4.4 | Effect of Gravity in a Horizontal Pipe | 212 |
| 6.4.5 | Power Balance | 213 |
| 6.5 | Additional Pressure Drop Factor (λ_Z) | 213 |
| 6.6 | Pressure Drop | 215 |
| 6.6.1 | Horizontal Conveyance | 216 |
| 6.6.2 | Vertical Conveyance | 217 |
| 6.6.3 | Compressibility of Air | 217 |
| 6.6.4 | Pressure Drop in a Gas–Solid Mixture | 219 |
| 6.6.5 | Pressure Drop Due to Acceleration | 219 |
| 6.6.6 | Pressure Drop Due to Height ΔZ | 220 |
| 6.6.7 | Boundary Conditions for Calculations | 220 |
| 6.6.8 | Comprehensive Pressure Drop Equation | 220 |
| 6.7 | Some Important Functional Relationships | 222 |
| 6.7.1 | Introduction | 222 |
| 6.7.2 | Relationship of λ_Z to Fr and μ | 222 |
| 6.7.3 | Interpretation of λ_Z^* and β | 222 |
| 6.7.4 | Solid/Gas Velocity Ratio c/v | 222 |
| 6.7.5 | The Determination of Particle Velocity (c) and Voidage (ϵ) | 222 |
| 6.7.6 | Sequence to be Followed to Obtain the Impact and Friction Factor λ_Z^* | 228 |
| 6.8 | Sequence to be Followed to Obtain the System Pressure Loss (Δp) | 229 |
| | References | 235 |
| 7 | Feeding of Pneumatic Conveying Systems | 237 |
| 7.1 | Introduction and Overall Design Philosophy | 237 |
| 7.2 | Classification of Feeding Systems | 238 |
| 7.2.1 | Pressure Characteristics | 238 |
| 7.2.2 | Classification in Terms of System Requirements | 238 |

| | | |
|----------|--|------------|
| 7.3 | Feeder Selection Criteria | 238 |
| 7.4 | Low-Pressure Feeding Devices | 239 |
| 7.4.1 | The Venturi Feeder..... | 240 |
| 7.4.2 | Negative Pressure Feeding Devices | 241 |
| 7.4.3 | Rotary Airlocks | 245 |
| 7.4.4 | Combined Negative Pressure/Positive Pressure System..... | 258 |
| 7.5 | Medium-Pressure Feeding Systems | 259 |
| 7.5.1 | The Fluid–Solids Pump..... | 259 |
| 7.5.2 | The Mohno Powder Pump..... | 261 |
| 7.5.3 | The Waeschle High-Pressure Rotary Valve..... | 263 |
| 7.5.4 | Vertical Lift Pump (Air Lift) | 263 |
| 7.5.5 | Double Gate Lock Feeding Device | 268 |
| 7.6 | High-Pressure Feeding Devices | 269 |
| 7.6.1 | Description of Blow Vessel..... | 269 |
| 7.6.2 | Blow Vessel Operation | 269 |
| 7.6.3 | Discharge Characteristics of a Blow Vessel | 271 |
| 7.6.4 | Factors Influencing Blow Vessel Performance | 274 |
| 7.6.5 | Blow Vessel Configuration | 277 |
| 7.6.6 | Low-Velocity and Plug Conveying Systems..... | 287 |
| 7.7 | Conclusions | 300 |
| | References | 300 |
| 8 | Flow in Standpipes and Gravity Conveyors | 303 |
| 8.1 | Introduction: Standpipes and Gravity Conveyors | 303 |
| 8.2 | Classification of Standpipe Systems | 303 |
| 8.2.1 | The Simple Standpipe | 305 |
| 8.2.2 | System with Top and Bottom Terminal Pressure as Independent Parameters | 305 |
| 8.2.3 | System with Top Terminal Pressure as Independent Parameter | 306 |
| 8.2.4 | System with Top and Bottom Terminal Pressure and Solid Rate as Independent Parameters | 306 |
| 8.2.5 | Summary of Classification | 308 |
| 8.3 | Classification of Flow Modes in a Standpipe | 308 |
| 8.3.1 | Non-fluidized Flow | 308 |
| 8.3.2 | Fluidized Flow | 309 |
| 8.3.3 | Summary of Flow Modes..... | 310 |
| 8.4 | Equations Pertaining to Each Flow Mode | 311 |
| 8.4.1 | Non-fluidized Flow | 311 |
| 8.4.2 | Fluidized Flow | 312 |
| 8.5 | Flow Through a Valve | 313 |
| 8.5.1 | Flow Through a Slide Valve | 313 |
| 8.5.2 | Flow Through Non-mechanical Valves | 315 |

- 8.6 Stability of Standpipe Flow317
 - 8.6.1 Flooding Instability317
 - 8.6.2 Multiple Steady States and Bifurcation Instability318
 - 8.6.3 Ledinegg Type Instability319
 - 8.6.4 Stability Analysis of Rangachari and Jackson.....319
 - 8.6.5 A Summary of Instability319
- 8.7 Analysis of Industrial Standpipes: Case Studies319
 - 8.7.1 Underflow Standpipe320
 - 8.7.2 Overflow Standpipe322
 - 8.7.3 Summary of Case Studies323
- 8.8 Gravity Conveyors323
 - 8.8.1 Introduction323
 - 8.8.2 Design Procedure324
 - 8.8.3 A Worked Example328
- References.....329

- 9 An Overview of High-Pressure Systems Including Long-Distance and Dense Phase Pneumatic Conveying Systems331**
 - 9.1 Introduction331
 - 9.2 High-Pressure Systems332
 - 9.3 High-Pressure Conveying332
 - 9.4 Dense Phase Flow Classification333
 - 9.5 A Description of Plug Flow and the Relationships Between Plug Flow and Material Characteristics333
 - 9.6 System Selection and Product Characteristics337
 - 9.7 Dense Phase System Design.....339
