<b>1 Interactions of Charged, Accelerated Particles in the Solar Atmosphere, and the Generation of Secondary Energetic Particles and Radiation: Pioneer Results</b>	<b>1</b>
1.1 Interactions of Charged Accelerated Particles in the Solar Atmosphere and Expected Energetic Secondary Radiation from the Sun: The First Model Calculations	1
1.1.1 The Matter and Short History of the Problem	1
1.1.2 Expected Neutron Production in Solar Flare Acceleration Processes	2
1.1.3 Expected Energy Spectra of Generated Neutrons	3
1.1.4 On the Escaping of Solar Neutrons into Interplanetary Space	4
1.1.5 The Solar Neutron Survival Probability of Reaching the Distance of 1 AU from the Sun Before Decaying	6
1.1.6 On the Expected Spectrum of Solar Neutrons at the Distance of 1 AU from the Sun	8
1.1.7 Expected Time-Dependent Solar Neutron Flux at the Distance of 1 AU from the Sun	8
1.1.8 Expected Spectra of Decay Protons at the Distance of 1 AU from the Sun	10
1.1.9 Probabilities That Solar Neutrons Will be Captured with the Generation of 2.2 MeV Gamma-Quanta, Will Decay or Will Escape from the Solar Atmosphere into Interplanetary Space in Dependence of Its Energy	11
1.1.10 Expected Continual Gamma-Ray Emission from Solar Flares	12
1.1.11 Expected Gamma-Ray Fluxes in Lines from a Nucleus Excited by Accelerated Particles	13

1.1.12 Long-Lived Radioactive Nuclei Produced in the Solar Atmosphere During Chromospheres Flares and Possible Solar Gamma-Rays from the Quiet Sun .....	16
1.1.13 Estimations of Expected Solar Neutron and Gamma-Ray Emissions in Suggestion That the Optical Emission of Solar Flares is Provided by Ionization Losses of Accelerated Charged Particles .....	16
1.2 Estimations of Expected Solar Neutron and/or Gamma-Ray Fluxes from Historical Powerful Flare-Generated Energetic Charged Particles .....	18
1.2.1 The Event of November 12, 1960 .....	19
1.2.2 The Event of May 23, 1967 .....	19
1.2.3 The Events of August 4 and 7, 1972 .....	20
1.3 Search for Solar Neutrons Using Balloon and Space Probe Experiments .....	20
1.3.1 The Matter and Short History of the Problem .....	20
1.3.2 Search for Solar Neutrons at Quiet Conditions .....	21
1.3.3 Search for Solar Neutrons in Periods of Flare Conditions .....	22
1.3.4 Comparison of the First Attempts to Search for Solar Neutrons Using Balloons with the Expected for August 4, 1972 .....	23
1.4 Search for Solar Neutrons Using Ground Measurements .....	23
1.5 The First Attempts at Solar Gamma-Ray Search .....	29
1.5.1 Solar Gamma Ray Flux in Quiet Geophysical Conditions .....	29
1.5.2 On the Rigid X-Radiation from Solar Flares .....	29
1.5.3 The First Searches for Gamma-Ray Fluxes from Solar Flares .....	29
1.6 The First Attempts to Search for Solar Positrons .....	30
References for Preface and Chapter 1 .....	32
<b>2 The Events of August 1972 and the Discovery of Solar Gamma-Radiation .....</b>	<b>35</b>
2.1 Main Peculiarities of the August 1972 Events .....	35
2.2 The Discovery of Solar Gamma-Radiation .....	36
References for Chapter 2 .....	38
<b>3 The Events of June 1980 and June 1982, and the Discovery of Solar Neutrons .....</b>	<b>41</b>
3.1 Main Peculiarities of the June 1980 and June 1982 Solar Events .....	41
3.1.1 Energetic Particle Observations on Helios-1 .....	41
3.1.2 Peculiarities of Particle Injection in the Three Events of June 7, 1980 .....	42

3.1.3 Isotopic and Chemical Composition of Energetic Particles in the Events on June 21, 1980 and June 3, 1982 .....	43
3.1.4 Peculiarities in the Radio Emission During the June 3, 1982 Event .....	43
3.2 Observations of Gamma Radiation During the Events of June 1980 and June 1982 as Evidence of Neutron Generation .....	44
3.2.1 The Event of June 7, 1980: Time Behaviour of Acceleration Processes .....	44
3.2.2 The Event of June 21, 1980: Gamma-Radiation and the First Satellite Observation of High Energy Solar Neutrons .....	45
3.2.3 The Event of June 3, 1982: Two-Pulses of High Energy Gamma-Radiation and Evidence of Solar Neutron Generation .....	46
3.3 The Discovery of Solar Neutrons by the Gamma Ray Spectrometer on the Solar Maximum Mission .....	47
3.3.1 The 1:18 UT June 21, 1980 Event: the First Reliable Solar Neutron Observation .....	47
3.3.2 The 11:43 UT June 3, 1982 Event: Simultaneous Observations of Solar Neutrons on SMM and by a High Mountain Neutron Supermonitor .....	49
3.4 June 3, 1982: the First Solar Neutron Event Observed by Neutron Supermonitors .....	51
3.5 Some Constraints for Neutron Generation Processes on the Sun Follow from June 21, 1980 and June 3, 1982 Event Data .....	54
References for Chapter 3 .....	56
 <b>4 Space Probe Observations of Solar Neutron and Gamma Ray Events .....</b>	 <b>59</b>
4.1 The First Solar Neutron and Gamma Ray Event Observed on SMM .....	59
4.2 Solar Neutron and Gamma Ray Events Observed on the Satellites SMM and Hinotori .....	59
4.3 Solar Neutron and Gamma Ray Events Observed By the COMPTEL Experiment at the Compton Gamma-Ray Observatory .....	60
4.4 The Solar Neutron and Gamma Ray Event of April 25, 1984 .....	61
4.5 The Solar Neutron and Gamma Ray Event of March 6, 1989 .....	62
4.6 The Solar Neutron and Gamma Ray Event of June 4, 1991 .....	65
4.7 The Solar Neutron and Gamma Ray Event of June 9, 1991 .....	65
4.8 The Solar Neutron and Gamma Ray Event of June 15, 1991 .....	67
4.9 The Solar Neutron and Gamma Ray Event of November 6, 1997 .....	68
References for Chapter 4 .....	68

<b>5 Solar Neutron Propagation in the Earth's Atmosphere, and the Sensitivity of Neutron Monitors and Other Ground Based Detectors to Solar Neutrons</b> .....	71
5.1 The Atmospheric Depth for Ground Solar Neutron Observations in the Direction of the Sun .....	71
5.2 Integral Multiplicity and the Sensitivity of Neutron Monitors, Muon and Electron-Photon Detectors to High Energy Solar Neutrons (Obtained by Using Experimental Data of the Geomagnetic Effects of Charged Particles) .....	73
5.2.1 On the Possibility for Use, for High-Energy Solar Neutrons Data, of Ground Detectors Coupling Functions, Integral Multiplicity and Sensitivity Obtained for Charged Particles of Galactic and Solar Cosmic Rays .....	73
5.2.2 Possible Use, for High-Energy Solar Neutrons Data, of Experimental Determinations of Galactic and Solar Cosmic Ray Coupling Functions and Integral Multiplicity .....	74
5.2.3 Cosmic Ray Geomagnetic Effects and the Determination of Coupling Functions .....	75
5.2.4 Analytical Approximation of Coupling Functions and Integral Multiplicities .....	77
5.2.5 Experimental Data on Coupling Functions for the Neutron Component Represented in Analytical Form .....	79
5.2.6 On the Coupling Functions for the Lead-Free Neutron Monitor .....	81
5.2.7 On the Coupling Functions for Multiple Neutrons in a Neutron Supermonitor .....	82
5.2.8 On the Coupling Functions for Cosmic Ray Inclined Telescopes .....	85
5.2.9 Determination of Integral Multiplicity and the Sensitivity of Ground Based Detectors to Geomagnetic Effects Measurements .....	87
5.3 The Integral Multiplicity and Sensitivity of Neutron Monitors and Detectors of Charged Particles to High Energy Solar Neutrons, Obtained by Using Results of Theoretical Calculations of Meson-Nucleon Cascades of Galactic Cosmic Rays .....	92
5.3.1 Calculations of Integral Multiplicity for the Muon Component .....	92
5.3.2 Calculations of Integral Multiplicity for the Neutron Component .....	94
5.3.3 Calculations of Integral Multiplicity for Multiple Neutrons in the NM-64 Supermonitor .....	99
5.4 Calculations of Integral Multiplicity and Sensitivity of the Neutron Monitor at Various Depths Depending on the Zenith Angle of Primary Particle Incidence .....	101

5.4.1	Calculations of Integral Multiplicity for Primary Protons with Energies 3 and 10 GeV .....	102
5.4.2	On the Dependence of Integral Multiplicities $m^n(E_0, \theta_0, h)$ with Atmospheric Depth .....	103
5.4.3	On the Dependence of Integral Multiplicities $m^n(E_0, \theta_0, h)$ with Zenith Angle $\theta_0$ .....	105
5.4.4	On the Dependence of Integral Multiplicities from Atmospheric Depth and Zenith Angle .....	106
5.4.5	On the Testing of Dorman and Pakhomov (1979) Calculations of the Integral Multiplicities Using Solar Neutron Observation Data .....	107
5.5	On the Small Energy Solar Neutron Propagation in the Earth's Atmosphere and the Sensitivity of Neutron Monitors and Other Ground Based Detectors to Solar Neutrons .....	108
5.5.1	Calculations of Solar Small Energy Neutron Propagation in the Atmosphere to an Depth 300 g/cm <sup>2</sup> .....	108
5.5.2	The First Calculations of Neutron Monitor 'Sensitivity' to Small Energy Solar Neutrons .....	108
5.5.3	A One-Dimensional Model of Solar Neutron Propagation in the Earth's Atmosphere and the Relative Role of Elastic Scattering .....	112
5.5.4	Deflection by Scattering and Expected Angular Distribution of Secondary Nuclear Active Particles in the Atmosphere Depending on $E_0$ and Depth $h$ .....	113
5.5.5	Model for Monte Carlo Simulation of Small Energy Neutron Propagation Through the Earth's Atmosphere .....	115
5.6	On the 'Refraction' Effect in Solar Neutron Propagation Through the Earth's Atmosphere .....	119
5.6.1	Apparent Air Mass Along a Line of Sight Through the Atmosphere to the Sun and Contradiction with the Theory of Solar Neutron Propagation in the Atmosphere for the Event of 24 May, 1990 .....	120
5.6.2	The Illustrative Model of the Solar Neutron 'Refraction' Effect in the Earth's Atmosphere .....	121
5.7	Simulation and Analytical Description of the Refraction Effect ..	122
5.7.1	The Matter and Short History of the Problem .....	122
5.7.2	Expected Zenith Angle Distributions of Scattered Neutrons .....	126
5.7.3	Description of the Numerical Simulation .....	128
5.7.4	Expected Fluxes and Zenith Angle Distributions for Vertical Arrival of Solar Neutrons .....	131
5.7.5	Expected Fluxes and Zenith Angle Distributions for Inclined Arrival of Solar Neutrons .....	131
5.7.6	Analytical Approach: General Solution .....	136
5.7.7	Analytical Solution: The First Approximation .....	137

5.7.8	Second Approximation: $\sigma_e(h, \theta_0) = \sigma_0/(h/\lambda \cos \theta_0)$ and $L_e$ as the Arc of a Circle Connected by Arrival and Detection Points .....	138
5.7.9	Third and Fourth Approaches: $\sigma_e$ and $L_e$ as for Multiple Scattering .....	139
5.7.10	Refraction Effect in the Expected Solar Neutron Flux .....	142
5.7.11	Refraction Effect and the Effective Zenith Angle of Solar Neutron Arrival Deep in the Earth's Atmosphere .....	143
5.7.12	Summary of Main Results and Conclusions .....	144
5.8	Analytical Description of Solar Neutron Propagation in the Earth's Atmosphere by Considering Scattering, Attenuation and Energy Change .....	145
5.8.1	The Matter of the Problem .....	145
5.8.2	Decrease of Solar Neutron Energy During Scattering in the Atmosphere .....	146
5.8.3	Dependence of Single Effective Scattering Angle on Neutron Energy .....	147
5.8.4	Expected Solar Neutron Angular Distribution in the Atmosphere .....	147
5.8.5	Solar Neutron Angular Distributions in the Atmosphere for Vertical Initial Arrival .....	148
5.8.6	Solar Neutron Angular Distributions in the Atmosphere for Arrival at the Initial Zenith Angle $30^\circ$ .....	149
5.8.7	Solar Neutron Angular Distributions in the Atmosphere for Arrival at the Initial Zenith Angle $75^\circ$ .....	149
5.8.8	Effective Zenith Angle of Arriving Neutrons .....	149
5.8.9	Integral Multiplicities for Solar Neutrons .....	150
5.8.10	Refraction Effect in Dependence from $\theta_0$ and $h$ .....	152
5.8.11	Comparison of Results With and Without the Inclusion of the Neutron Energy Change .....	153
5.8.12	Main Results and Conclusion .....	154
	References for Chapter 5 .....	155
<b>6</b>	<b>Statistical Investigations of Solar Neutron Events on the Basis of Ground Observations .....</b>	<b>161</b>
6.1	Statistical Investigations of Solar Neutron Events Using the Rome Neutron Supermonitor 5-min Data for 1978–1982 .....	161
6.2	Statistical Investigation of Solar Neutron Events Using the Chacaltaya Neutron Supermonitor 5-min Data for 1980–1982 ....	164
6.3	Statistical Investigations of Solar Neutron Events Using the Tyan Shan Neutron Supermonitor 5-min Data .....	167
6.3.1	Solar Neutron Events and the Behavior of the Cosmic Ray Variations $\delta$ and Its Augmentations $\Delta$ .....	167
6.3.2	Results of Superposed Epoch Analysis .....	170

6.3.3	Extended Superposed Epoch Analysis Using GOES and CGRO Satellite Data on X-Ray Events .....	173
6.4	Statistical Investigation of Solar Neutron Events Using the 5-min Data of the Neutron Supermonitors of the Sayan Spectrograph .....	174
6.4.1	Short Description of the Sayan Spectrograph .....	174
6.4.2	Superposed Epoch Analysis for H $\alpha$ Flares .....	175
6.4.3	Solar Neutrons from Flares Accompanied by X-Rays of Class $\geq$ M2.0 .....	175
6.4.4	Solar Neutrons from Impulsive Bright Flares Accompanied by Hard X-Rays of $\geq$ M2.0 Class .....	176
6.4.5	Solar Neutrons from Gradual Bright Flares Accompanied by Hard X-Rays of $\geq$ M2.0 Class .....	176
6.5	Upper Limits on High-Energy Solar Neutron Fluxes from Gamma Ray Flares According to Yangbajing NM Observations .....	177
6.5.1	The Matter of the Problem .....	177
6.5.2	Main Properties of the Yangbajing NM .....	177
6.5.3	Flare Distribution .....	177
6.5.4	Emission Profiles of Solar Neutrons .....	178
6.5.5	Results of Statistical Significances of Neutron Signals .....	180
6.5.6	The Flux Upper Limits of the 'Final-Sample Flares' .....	180
6.5.7	Summary of Main Results .....	182
	References for Chapter 6 .....	183
<b>7</b>	<b>Observations of Solar Neutron Events by Ground Based Detectors, and Their Interpretation .....</b>	<b>185</b>
7.1	Investigations of Solar Neutron Events by the Tyan Shan High Altitude Neutron Supermonitor .....	185
7.1.1	The Matter and Short History of the Problem .....	185
7.1.2	Data and Method of Analysis .....	186
7.1.3	The List of Possible Neutron Events During 1979–1998 .....	187
7.1.4	The Event of 7 May, 1978, Caused by Solar Protons But Not Neutrons .....	187
7.1.5	The Event of 24 July, 1979 (Onset of the x-Ray Event at 07:59 UT) as an Example of Possible Neutron Enhancement .....	187
7.1.6	The Event of 17 June, 1991 (Onset of the x-Ray Event at 08:09 UT) as an Example of Possible Neutron Enhancement and the Shock Wave Effect .....	188
7.1.7	The Event of 8 May, 1998 (Onset of the x-Ray Event at 05:53 UT) .....	189
7.1.8	Main Results and Discussion .....	190

7.2	Possible Solar Neutron Event on May 9, 1980 Detected by Tyan Shan High Altitude Neutron Supermonitor .....	190
7.3	The Event of June 7, 1980 .....	190
7.4	The Event of June 21, 1980 .....	194
7.5	The Event of November 6, 1980 .....	194
7.6	Possible Solar Neutron Events on the 1st and 2nd of April 1981, as Detected by Tyan Shan High Altitude Neutron Supermonitor .....	197
7.7	The Solar Neutron Event on April 4, 1981 .....	197
7.7.1	Solar Ground Observations .....	197
7.7.2	Observations on the Satellite Hinotori of Hard x- and $\gamma$ -Radiations .....	198
7.7.3	Satellite Observations of Energetic Protons and Estimation of Relative Part of Particles Escaping into Interplanetary Space .....	198
7.7.4	6NM-64 Observations at Station Hulugaisha .....	199
7.8	The Possible Event on April 27, 1981 .....	201
7.9	Possible Solar Neutron Event on July 19, 1981 .....	201
7.10	Possible Solar Neutron Event on August 10, 1981 .....	201
7.11	Full Differential Flux of Solar Neutrons at the Top of the Earth's Atmosphere During the Event of 3 June 1982 ....	201
7.12	Possible Solar Neutron Events on June 5 and 12, 1982 .....	202
7.13	Possible Solar Neutron Events on July 6 and August 14, 1982 .....	202
7.14	The Solar Neutron Event on November 26, 1982 .....	203
7.15	The Solar Neutron Event on 25 April, 1984, and the Possible Neutron Event on May 20, 1984 .....	205
7.15.1	Solar Ground and SMM Observations of Flare 25 April 1984 .....	205
7.15.2	Solar Neutron Observations by NM During the Event 25 April, 1984 .....	206
7.15.3	Comparison of the Event of 25 April, 1984 with the Event of June 3, 1982 .....	207
7.15.4	Possible Solar Neutron Event of 20 May, 1984 .....	207
7.16	On the Possible Solar Neutron Event on December 16, 1988 ....	209
7.17	The Largest Solar Neutron Event on May 24, 1990 .....	209
7.17.1	Properties of Flare and x-Ray and $\gamma$ -Ray Data .....	209
7.17.2	Position of the Sun During the Event, and NM Data ....	210
7.17.3	Comparison with the Event of June 3, 1982 .....	212
7.17.4	Peculiarities of Effects Observed by NM and Muon Telescopes in Yakutsk .....	213
7.17.5	Determining of the Full Differential Flux of Solar Neutrons at the Top of the Earth's Atmosphere .....	214
7.17.6	Comparison of Full Differential Fluxes of Solar Neutrons at the Top of the Earth's Atmosphere During the Events of 24 May, 1990 and 3 June, 1982 ...	214

7.18	Solar Neutron Event on February 22, 1991 and Possible New Special Class of Solar Flares, Very Deep in the Chromosphere (Near Photosphere) .....	215
7.19	Solar Neutron Events on March 22 and May 3, 1991 .....	215
7.19.1	Main Properties of Solar Flare at March 22, 1991 .....	215
7.19.2	Solar Neutron Observation from 22 March, 1991 by Neutron Monitor on Mt. Haleakala .....	217
7.19.3	Comparison of the Solar Neutron Event of March 22, 1991 with the Gamma-Ray Event Observed by IMP-8 and x-Ray Event Observed by GOES-6 .....	218
7.19.4	Full Differential Flux of Solar Neutrons at the Top of the Earth's Atmosphere During the Solar Neutron Event of March 22, 1991 .....	219
7.19.5	Possible Solar Neutron Event on May 3, 1991 .....	219
7.20	Solar Neutron Event at 1st June 1991: Surprisingly Intense Neutron Emission from a Flare Behind the Limb of the Sun ....	221
7.20.1	The Matter and Short History of the Problem .....	221
7.20.2	The OSSE Response to Solar Neutrons .....	224
7.20.3	Observations During the June 1, 1991 Solar Flare .....	225
7.20.4	Comparison Observations of June 1, 1991 and June 4 Solar Flares .....	228
7.20.5	Main Results and Discussion of the June 1, 1991 Event, and Comparison with June 4, 1991 Event .....	229
7.20.6	Summary and Conclusions .....	232
7.21	Solar Neutron Event on June 4, 1991 .....	233
7.21.1	Main Properties of the Flare and Satellite Observations of 2.223 MeV Gamma-Ray Line and 17 GHz Microwave Intensity .....	233
7.21.2	Observations by Solar Neutron Telescope at Mt. Norikura and Estimation of Solar Neutron Fluency at the Top of the Atmosphere .....	234
7.21.3	Observations of Muons Generated in the Earth's Atmosphere by Solar Neutrons .....	235
7.21.4	Observations by Neutron Monitors in Japan .....	236
7.21.5	Determination of the Solar Neutron Attenuation Mean Free Path in the Earth's Atmosphere .....	236
7.21.6	Energy Spectrum of Solar Neutrons on the Top of the Atmosphere .....	237
7.21.7	Emissivity Spectrum of Solar Neutrons on the Sun ....	239
7.21.8	Possible Time-Profile of Solar Neutron Generation on the Sun and Energy Spectrum at the Source .....	239
7.21.9	CGRO Satellite and Neutron Monitor Observations of Solar Neutrons .....	242
7.22	Solar Neutron Event on June 6, 1991 .....	244
7.22.1	Observations by the Solar Neutron Telescope at Mt. Norikura .....	244

7.22.2	Comparison of Satellite Gamma Ray and NM on Mt. Norikura and Mt. Haleakala Observations .....	244
7.23	Solar Neutron Events on November 6, 1997 .....	247
7.23.1	Observations at Chacaltaya by the Solar Neutron Telescope from the Flare X9.4/2B at 11:49 UT .....	247
7.23.2	Observations of Neutrons in Association with C4.7 Solar Flare Which Started at 11:31 UT and Continued Until 11:44 UT of 6 November, 1997 .....	250
7.24	Possible Solar Neutron Event on November 23, 1998 .....	253
7.25	Solar Neutron Event on November 28, 1998 .....	255
7.25.1	Observations by the Tibet Solar Neutron Telescope .....	255
7.25.2	Arrival of Solar Neutrons at Large Zenith Angle and the Refraction Effect .....	256
7.25.3	Determining of the Solar Neutron Spectrum at the Top of the Earth's Atmosphere .....	257
7.26	Search for Solar Neutrons in Association with Large Solar Flares in July 2000 and in March–April 2001: Three Categories of Solar Neutron Events .....	259
7.26.1	Data Analysis .....	259
7.26.2	Simultaneous Observations .....	260
7.26.3	The Estimation of the Start Time of Ion Acceleration ...	260
7.26.4	Summary of Main Obtained Results: Three Categories of Solar Neutron Events .....	263
7.27	Solar Neutron Event on November 24, 2000 .....	263
7.27.1	Observations of x- and $\gamma$ -Ray Fluxes .....	263
7.27.2	Observations of Solar Neutrons at Mt. Chacaltaya .....	267
7.27.3	Checking of the Detection Efficiency of the Neutron Monitor .....	269
7.27.4	Attenuation of Solar Neutrons in the Atmosphere During the 24th of November 2000 Event .....	270
7.27.5	Energy Spectrum at the Solar Surface and Total Energy of Emitted Solar Neutrons .....	270
7.27.6	Comparison with Other Solar Neutron Events .....	272
7.28	The Solar Neutron and GLE Event of April 15, 2001 .....	273
7.28.1	The Event of the 15 April, 2001 and the Importance of Solar Neutron and GLE Event Investigation .....	273
7.28.2	Satellite x-Ray and $\gamma$ -Ray Observations .....	274
7.28.3	NM Observations at Mt. Chacaltaya .....	274
7.28.4	NM Observations at Mt. Jungfrauoch and Mt. Gornergrat .....	275
7.28.5	NM Observations at the South Pole .....	275
7.28.6	NM Observations at Mt. Aragats .....	276
7.28.7	The Sequence of Observations and Results of Data Analysis for Solar Neutrons .....	277

7.28.8 Comparison with Data on Solar Protons .....	282
7.29 Solar Neutron Event in Association with a Large Solar Flare on August 25, 2001 .....	286
7.29.1 The Matter of Problem .....	286
7.29.2 NM Observations at Mt. Chacaltaya in Comparison with x-Ray and $\gamma$ -Ray Data Obtained by the Yohkoh Satellite .....	287
7.29.3 Estimation of the Differential Neutron Ejection Energy Spectrum at the Sun and Total Energy in Solar Neutrons .....	288
7.30 Detection of Solar Neutrons During the Event in Association with the 24 September, 2001 Flare, Using Tibet Solar Neutron Telescope .....	290
7.30.1 The Matter and Short History of the Problem .....	290
7.30.2 Properties of a Flare and Conditions for Solar Neutron Observations .....	290
7.30.3 The Tibet Solar Neutron Telescope and Observation Data .....	290
7.30.4 Comparison with Simulation Results .....	292
7.30.5 Peculiarities of the Solar Neutron Event in Association with the 24 September, 2001 Flare .....	293
7.31 Solar Neutron Event of October 28, 2003 .....	293
7.31.1 The Matter and Short History of the Event Observation and Research .....	293
7.31.2 Satellite Observations of $\gamma$ -Rays and Determining the Time of Solar Neutron Production .....	294
7.31.3 Solar Neutron Observations .....	296
7.31.4 Analysis of Observational Data and the Determining of the Ejected Solar Neutron Energy Spectrum .....	297
7.31.5 Simulation in the Frame of Impulsive Models .....	299
7.31.6 Simulation by Neutron Production with $\gamma$ -Ray Time Profile .....	300
7.31.7 Simulation on the Basis of the Time History of the 2.223 MeV Neutron Capture Line and the Spectra of Neutrons Escaping from the Sun .....	301
7.31.8 Summarizing of the Main Results on the Event of 28 October, 2003 .....	305
7.32 Solar Neutron Event on November 2, 2003 .....	305
7.32.1 Intensive Activity of the Sun from Late October to the Beginning of November 2003 .....	305
7.32.2 Gamma-Ray Observations During the November 2, 2003 Event .....	305
7.32.3 Solar Neutron Observations During the November 2, 2003 Event .....	307
7.32.4 Solar Neutron Energy Spectrum at the Sun .....	309

7.33	Solar Neutron Event on 4 November, 2003 .....	310
7.33.1	Satellite Observations of x- and $\gamma$ -Rays .....	310
7.33.2	Simultaneous Observations of Solar Neutrons by NM and Solar Neutron Telescope .....	312
7.33.3	Analysis of Obtained Experimental Results and Ejected Spectra .....	315
7.33.4	Simulation by Using the Impulsive Model .....	316
7.33.5	Simulation by Neutron Production Using the $\gamma$ -Ray Profile .....	319
7.33.6	Discussion and Main Results for the Event of the 4 November, 2003 .....	320
7.34	Solar Neutron Event of the 7th of September 2005 .....	321
7.34.1	The Matter of Problem and Short History of Observations and Research .....	321
7.34.2	Observation Data .....	322
7.34.3	Response Functions for Different Channels .....	322
7.34.4	Determining the Solar Neutron Differential Energy Spectrum .....	323
7.34.5	Discussion on Possible Truncated Solar Neutron Spectra at 500 MeV .....	325
7.34.6	Energy Spectrum for the Solar Neutron Event of the 7 September, 2005, Derived from the Solar Neutron Telescope at Sierra Negra .....	326
7.34.7	Ion Acceleration and Neutral Emission Mechanisms for the 7 September, 2005 Flare .....	329

11.9.9 Comparisons of the Total Fluencies of the Interacting and Interplanetary Solar Protons .....	765
11.9.10 Summary of Main Results and Conclusions .....	765
11.10 Angular and Energy-Dependent Neutron Emission from Solar Flare Magnetic Loops: Model and Monte Carlo Simulation .....	766
11.10.1 The Matter and Short History of the Problem .....	766
11.10.2 Neutron-Producing Reactions and Their Threshold Energies .....	768
11.10.3 Neutron Production by Proton-Induced Reactions with $^{13}\text{C}$ , $^{15}\text{N}$ , $^{18}\text{O}$ , $^{22}\text{Ne}$ , $^{25}\text{Mg}$ , $^{26}\text{Mg}$ , $^{29}\text{Si}$ , and $^{54}\text{Fe}$ .....	769
11.10.4 Neutron Production by $\alpha$ -Particle-Induced Reactions .....	773
11.10.5 Neutron Production in $p + \alpha$ Reactions .....	774
11.10.6 Neutron Production in $\alpha + \alpha$ Reactions .....	777
11.10.7 Neutron Production in $^3\text{He}$ Reactions .....	778
11.10.8 Neutron Production in $p + p$ Reactions .....	779
11.10.9 Total Neutron Production Yields and Spectra .....	779
11.10.10 Neutron Production in Flare Loops .....	784
11.10.11 Escaping Neutrons .....	789
11.10.12 Summary of Main Results .....	793

11.11 Production of Energetic Light Isotopes Due to Nuclear Interaction and Acceleration in the Flare Region: Modeling and Simulation .....	793
11.11.1 The Matter and Short History of the Problem .....	793
11.11.2 Description of the Model .....	794
11.11.3 Nuclear Interactions in the Region of Acceleration ....	795
11.11.4 Nuclear Interactions and Acceleration .....	796
11.11.5 Propagation in the Interplanetary Space .....	796
11.11.6 Expected Isotope Energy Spectra in the ‘Nuclear’ Interaction Layer Without Any Energy Gain Inside ...	798
11.11.7 Taking into Account the Effect of Additional Acceleration .....	799
11.11.8 Taking into Account Propagation in the Interplanetary Space .....	799
11.11.9 Summary of Main Results and Discussion .....	800
11.12 Gamma Rays from Excited States of $^{12}\text{C}$ and Various Neutron Capture Lines: Investigation of Powerful Solar Flare Characteristics .....	801
11.12.1 The Matter and Short History of the Problem .....	801
11.12.2 Comparison of 15.11 MeV and 4.44 MeV $\gamma$ -Ray Lines from Solar Flares .....	802
11.12.3 Using of Neutron Capture Lines from Solar Flares ....	803
11.12.4 Applying the Model to the 20 January 2005 Event ....	805
11.12.5 Conclusion and Discussion on Main Obtained Results .....	807
References for Chapter 11 .....	808
<b>Appendix</b> .....	821
Numerical Simulations by Monte Carlo Method (for Section 11.6) ....	821
Kinetic Equation and Monte Carlo Simulations (for Section 11.7) ....	823
References for Appendix .....	827
<b>Conclusions and Problems</b> .....	829
General Conclusion .....	829
Main Conclusions for Different Chapters .....	830
Actual Problems for Solving in Near Future .....	834
References for Monographs and Books .....	836
<b>Author Index</b> .....	839
<b>Subject Index</b> .....	861
