1	Review of Radar Remote Sensing on Urban Areas	1
	Uwe Soergel	
1.1	Introduction	1
1.2	Basics	2
1.2.1	Imaging Radar	3
1.2.2	Mapping of 3d Objects	8
1.3	2d Approaches	11
1.3.1	Pre-processing and Segmentation of Primitive Objects	11
1.3.2	Classification of Single Images	13
1.3.2.1	Detection of Settlements	14
1.3.2.2	Characterization of Settlements	15
1.3.3	Classification of Time-Series of Images	16
1.3.4	Road Extraction	17
1.3.4.1	Recognition of Roads and of Road Networks	17
1.3.4.2	Benefit of Multi-aspect SAR Images for Road Network Extraction	19
1.3.5	Detection of Individual Buildings	20
1.3.6	SAR Polarimetry	20
1.3.6.1	Basics	21
1.3.6.2	SAR Polarimetry for Urban Analysis	23
1.3.7	Fusion of SAR Images with Complementing Data	24
1.3.7.1	Image Registration	24
1.3.7.2	Fusion for Land Cover Classification	25
1.3.7.3	Feature-Based Fusion of High-Resolution Data	26
1.4	3d Approaches	26
1.4.1	Radargrammetry	27
1.4.1.1	Single Image	27
1.4.1.2	Stereo	28
1.4.1.3	Image Fusion	29

1.4.2	SAR Interferometry	29
1.4.2.1	InSAR Principle	29
1.4.2.2	Analysis of a Single SAR Interferogram	32
1.4.2.3	Multi-image SAR Interferometry	34
1.4.2.4	Multi-aspect InSAR.....	34
1.4.3	Fusion of InSAR Data and Other Remote Sensing Imagery	36
1.4.4	SAR Polarimetry and Interferometry	37
1.5	Surface Motion	38
1.5.1	Differential SAR Interferometry	38
1.5.2	Persistent Scatterer Interferometry.....	39
1.6	Moving Object Detection	40
	References.....	41
2	Rapid Mapping Using Airborne and Satellite SAR Images	49
	Fabio Dell’Acqua and Paolo Gamba	
2.1	Introduction.....	49
2.2	An Example Procedure.....	51
2.2.1	Pre-processing of the SAR Images	51
2.2.2	Extraction of Water Bodies	52
2.2.3	Extraction of Human Settlements.....	53
2.2.4	Extraction of the Road Network	54
2.2.5	Extraction of Vegetated Areas	56
2.2.6	Other Scene Elements	57
2.3	Examples on Real Data	57
2.3.1	The Chengdu Case.....	58
2.3.2	The Luojiang Case.....	61
2.4	Conclusions.....	64
	References.....	66
3	Feature Fusion Based on Bayesian Network Theory for Automatic Road Extraction	69
	Uwe Stilla and Karin Hedman	
3.1	Introduction.....	69
3.2	Bayesian Network Theory	70
3.3	Structure of a Bayesian Network	72
3.3.1	Estimating Continuous Conditional Probability Density Functions	76
3.3.2	Discrete Conditional Probabilities	79
3.3.3	Estimating the A-Priori Term	80
3.4	Experiments	81
3.5	Discussion and Conclusion	82
	References.....	85

4	Traffic Data Collection with TerraSAR-X and Performance Evaluation	87
	Stefan Hinz, Steffen Suchandt, Diana Weihing, and Franz Kurz	
4.1	Motivation	87
4.2	SAR Imaging of Stationary and Moving Objects	88
4.3	Detection of Moving Vehicles	93
4.3.1	Detection Scheme	94
4.3.2	Integration of Multi-temporal Data	96
4.4	Matching Moving Vehicles in SAR and Optical Data	98
4.4.1	Matching Static Scenes	98
4.4.2	Temporal Matching	100
4.5	Assessment	101
4.5.1	Accuracy of Reference Data	101
4.5.2	Accuracy of Vehicle Measurements in SAR Images	103
4.5.3	Results of Traffic Data Collection with TerraSAR-X	103
4.6	Summary and Conclusion	107
	References	107
5	Object Recognition from Polarimetric SAR Images	109
	Ronny Hänsch and Olaf Hellwich	
5.1	Introduction	109
5.2	SAR Polarimetry	111
5.3	Features and Operators	117
5.4	Object Recognition in PolSAR Data	124
5.5	Concluding Remarks	129
	References	130
6	Fusion of Optical and SAR Images	133
	Florence Tupin	
6.1	Introduction	133
6.2	Comparison of Optical and SAR Sensors	135
6.2.1	Statistics	136
6.2.2	Geometrical Distortions	137
6.3	SAR and Optical Data Registration	138
6.3.1	Knowledge of the Sensor Parameters	138
6.3.2	Automatic Registration	140
6.3.3	A Framework for SAR and Optical Data Registration in Case of HR Urban Images	141
6.3.3.1	Rigid Deformation Computation and Fourier–Mellin Invariant	141
6.3.3.2	Polynomial Deformation	143
6.3.3.3	Results	144

6.4	Fusion of SAR and Optical Data for Classification.....	144
6.4.1	State of the Art of Optical/SAR Fusion Methods	144
6.4.2	A Framework for Building Detection Based on the Fusion of Optical and SAR Features	147
6.4.2.1	Method Principle.....	147
6.4.2.2	Best Rectangular Shape Detection	148
6.4.2.3	Complex Shape Detection	149
6.4.2.4	Results	150
6.5	Joint Use of SAR Interferometry and Optical Data for 3D Reconstruction.....	151
6.5.1	Methodology	151
6.5.2	Extension to the Pixel Level	154
6.6	Conclusion	157
	References	157
7	Estimation of Urban DSM from Mono-aspect InSAR Images.....	161
	Céline Tison and Florence Tupin	
7.1	Introduction	161
7.2	Review of Existing Methods for Urban DSM Estimation	163
7.2.1	Shape from Shadow	164
7.2.2	Approximation of Roofs by Planar Surfaces	164
7.2.3	Stochastic Geometry.....	165
7.2.4	Height Estimation Based on Prior Segmentation	165
7.3	Image Quality Requirements for Accurate DSM Estimation	166
7.3.1	Spatial Resolution	166
7.3.2	Radiometric Resolution	168
7.4	DSM Estimation Based on a Markovian Framework.....	169
7.4.1	Available Data	169
7.4.2	Global Strategy	169
7.4.3	First Level Features	171
7.4.4	Fusion Method: Joint Optimization of Class and Height	172
7.4.4.1	Definition of the Region Graph	172
7.4.4.2	Fusion Model: Maximum A Posteriori Model.....	173
7.4.4.3	Optimization Algorithm	178
7.4.4.4	Results	178
7.4.5	Improvement Method.....	179
7.4.6	Evaluation	181
7.5	Conclusion	183
	References	184

8	Building Reconstruction from Multi-aspect InSAR Data	187
	Antje Thiele, Jan Dirk Wegner, and Uwe Soergel	
8.1	Introduction	187
8.2	State-of-the-Art	188
8.2.1	Building Reconstruction Through Shadow Analysis from Multi-aspect SAR Data	188
8.2.2	Building Reconstruction from Multi-aspect Polarimetric SAR Data	189
8.2.3	Building Reconstruction from Multi-aspect InSAR Data	189
8.2.4	Iterative Building Reconstruction Using Multi-aspect InSAR Data	190
8.3	Signature of Buildings in High-Resolution InSAR Data	190
8.3.1	Magnitude Signature of Buildings	191
8.3.2	Interferometric Phase Signature of Buildings	194
8.4	Building Reconstruction Approach	197
8.4.1	Approach Overview	197
8.4.2	Extraction of Building Features	199
8.4.2.1	Segmentation of Primitives	199
8.4.2.2	Extraction of Building Parameters	200
8.4.2.3	Filtering of Primitive Objects	201
8.4.2.4	Projection and Fusion of Primitives	202
8.4.3	Generation of Building Hypotheses	202
8.4.3.1	Building Footprint	203
8.4.3.2	Building Height	205
8.4.4	Post-processing of Building Hypotheses	206
8.4.4.1	Ambiguity of the Gable-Roofed Building Reconstruction	206
8.4.4.2	Correction of Oversized Footprints	209
8.5	Results	211
8.6	Conclusion	212
